Many suggestions have been made to provide cheaper and more comfortable accommodation for the public, but it may be a considerable time before the money is forthcoming to accomplish all that the stewards of the Jockey Club have in mind.

***

For the present one can congratulate the Jockey Club on taking such a bold step, and if the boom that is anticipated in immediate post-war years is realised it may well be that the rulers of the Turf will feel they are justified in tackling such a tremendous enterprise. At this stage all who have the true interests of the Turf at heart will wish them well.

RACING IN IRELAND

By OUR SPECIAL CORRESPONDENT

Dublin, Saturday

The Turf Club and I.N.H.S. Committee, acting jointly, adopted several of the Irish Racing Commissioners' recommendations, but decided to take no action on the questions of centralisation or the acquisition of racecourses.

The commission which had been presided over by Lord Adare, urged the acquisition of the country's racecourses strongly, and expressed the hope that when more substantial funds were made available, either through the development of mechanical betting or otherwise, such a scheme might become practicable and should be proceeded with. In an appendix to the report even a mode of detailed procedure was suggested.

This acquisition of courses so as to ensure their uniform control by one governing body had been in the minds of several hard-thinking and far-seeing men in the racing and breeding business long before the appointment of a commission was even mooted.

Apparently it has appeared altogether too big a matter for such moments as we are passing through now, but the institution of the Jockey Club Company is not unlikely to bring such an interesting and wholly novel matter to the immediate front again.

Golden Jack does not run in the December Steeplechase at Leopardstown, on Monday, and in his absence Prince Regent should not have difficulty in winning the event for Mr. Rank. Verbatim runs instead of Golden Jack for Miss Paget.

CHRISTMAS DAY SWIMMING

The members of the Serpentine S.C. decided the eightieth Christmas race over the usual 100 yards course in the lake, Hyde Park, yesterday. Result: G. Brewster (35 sec. start) 1, Sergt. A. Goffrey (2[illegible]) [illegible] Boulton (10 sec.) 3.

SPORTING PRINTS

MELBOURNE INMAN

He was the best of his time.

It would be an empty tribute to suggest that Melbourne Inman was no more than that. In his time Inman beat many of his opponents before the game was begun. That is a better tribute, for he was a character, almost Dickensian, and character won.

Of the many types of ball games billiards, it has been said, is the most difficult of all to play with success. Temperament provides the acid test, not merely playing, or scoring, ability. Inman beat more finished players than himself, first because he made up his mind he would not lose, and, second, because he conveyed in some mysterious way, to the other mind, that he was not to be beaten.

The preliminaries to an important match are exacting and maybe slightly unnerving. Inman never conveyed nerves. They were not part of his make-up. He knew the open game thoroughly and he always seemed to leave his opponent with the impression that he knew much more about it than anyone. He had his day and richly he deserved it. It lasted for some time and until he was found out by others who had developed a faster scoring technique he more than held his own. He won the championship five times outright, and might have done more but for the 1914-18 war.

Between 1912 and 1919 Inman was unbeatable in championship games. He started very young as all successful billiard champions have done, and in 1908 there was no contest and he was declared champion. In the following year he beat a moderate challenger, A. E. Williams, with ease, and in 1910 the match between Inman and H. W. Stevenson was abandoned when the scores were 13,370—13,212 in Stevenson's favour. It had been a proper dog fight as most close matches had to be where Inman was concerned, particularly in the days when there was no limit to the number of consecutive misses allowed.

As a defensive player, he has never been excelled and that, in his time, was often a deciding factor.

In the next two finals, 1910-11, Stevenson beat Inman in matches of 18,000 up by a little over 1,000 points and then came Inman's reign. Three years in succession, up to 1914, Inman beat Reece in the final round well and truly. If, scientifically, he was not the better player of the two, he was nearly always the winner whenever they met. These two players formed a remarkable contrast, Reece beautifully correct and dainty, Inman dour, sound, consistent, and imperturbable. Incidentally these two combined did as much to develop the general playing skill as any other two in the history of the game.

Inman preserved his record by beating Stevenson in the final of 1919 and then came new ideas and his eclipse. But up to then what a great player he was. As he would say plaintively: It was this Chinese billiards which spoilt the game. He referred to the development of close cannon play. But still, at the age of 6[illegible], he is doing splendid work in exhibition games for the Red Cross.

DEATH

ABBEY. — On December 23rd, 1943, [illegible]

ordinary infectious diseases—mumps, and whooping cough, and measles and so on. If you've had these once, you're usually safe. But that's not the case with V.D.

You can catch V.D. just as often as you take the risk. Just recently I saw a man who first came to see me ten years ago. He told me he'd picked up a girl, taken too much to drink, and been intimate with her. When he arrived in my clinic a week later, he knew he'd got gonorrhœa—I didn't have to tell him. After months of treatment he was cured. Five years later, he came back again with the same sort of story. And again it took months to put right the result of one evening's indulgence. I thought he'd learned his lesson that time. But no. Ten days ago he came back again. I've started him off once more, this time on the new treatment for gonorrhœa.

I know he's an exceptional case. We shouldn't have much hope of checking the spread of V.D. if most people didn't have higher moral standards, more self-respect and more self-control than he's got. I only mention him to show that one attack of syphilis or gonorrhœa does *not* prevent a second attack, and that, leaving aside all questions of morals or decency, promiscuous sexual intercourse always carries a risk and cannot be made safe."

FREE CONFIDENTIAL ADVICE AND TREATMENT are available at clinics set up by County and County Borough Councils. Any doctor will give the address. Further information can be obtained IN CONFIDENCE from the Health Department at your local Council's offices, or by writing to the Medical Adviser, Central Council for Health Education, Tavistock House, Tavistock Square, London, W.C.1. Please enclose a stamped addressed envelope.

Quebec Diary . . .

The last guest has departed and the feudal spires of Quebec's Chateau Frontenac hotel are in darkness. The tourists and businessmen who populate its corridors are gone and the hotel is ready for an entirely new roster of guests.

A short distance away on top of the Quebec rock, the staff of the old Citadel is also preparing for newcomers. The rooms where once Montcalm planned the future of New France are shining and ready. Guards at the gates of the great, winding walls have their orders.

La Citadelle is ready once again to play host to history.

Tuesday, August 10 Today the world knows that Quebec City has been chosen as the scene for a war conference. Prime Minister Winston Churchill, his wife and daughter have arrived with members of the British General Staff. At the Chateau Frontenac armed guards of the Canadian Army stand at the gates. Royal Marines and officers of the Royal Canadian Mounted Police patrol the corridors of the hotel. In rooms, where travellers from every quarter of the globe have lived while they visited scenes of Canada's earliest history, Canadian and British chieftains of the armed services have set up offices and sleeping quarters.

Prime Minister Churchill, Mrs. Churchill and their daughter, Subaltern Mary Churchill, ATS, who is her father's aide-de-camp, are welcomed at the Citadel by Prime Minister W. L. Mackenzie King and members of his cabinet.

The official announcement says briefly that the Churchills and British staff officers have arrived. But in Quebec and everywhere in Canada people are asking questions.

"Is President Roosevelt coming?"

"Is Premier Stalin going to be here?"

Wednesday, August 11 Crowds of expectant Quebecers gather at the gates of the Chateau Frontenac, standing hours in blustery weather to catch a glimpse of the British Prime Minister. Within the hotel preliminary conferences have begun between British and Canadian chiefs of staff. Admiral Sir Dudley Pound, First Lord of the Admiralty, is conferring with Vice-Admiral Percy W. Nelles, Canadian Chief of Naval Staff; General Sir Allan Brooke, Chief of the Imperial General Staff, with Lieut.-General Kenneth Stuart, Chief of Staff, Canadian Army, and Air Marshal Sir Charles Portal, British Chief of Air Staff with Air Marshal L. S. Breadner, Canadian Chief of Air Staff. There are general conferences, too, with Lord Louis Mountbatten, chief of Combined Operations, Field Marshal Sir John Dill, head of the Joint Mission in Washington, and General Sir Hastings Lionel Ismay, Chief of Staff to the British Minister of Defence, in leading roles. War leaders of Britain and Canada are planning the campaigns which lie ahead on the road to victory.

Thursday, August 12 In a driving rain storm Prime Minister Churchill takes time out to pay his respects to Premier Adelard Godbout of Quebec. He sits in conference with the cabinet of the Legislative Assembly, governing body of Quebec Province. Canadian newswriters are telling their readers not to expect startling announcements from Quebec. No surprises are being planned for the people of the United Nations . . . these are reserved for the enemy. Singly and in groups, chiefs of staff and highranking officers of the United States services arrive by train and airplane. Present at the conference are General George C. Marshall, Chief of Staff, U.S. Army; General H. H. Arnold, chief of staff, U.S. Army Air Forces; Admiral Ernest King, Commander of the U.S. Fleet; General Brehon Somervell, Chief of Supply and Service Troops of the U.S. Army, and many other leaders of American forces.

Friday, August 13 Wing Commander Guy Gibson, V.C., D.S.O. and bar, D.F.C. and Bar, R.A.F. hero and most-decorated man of the war, holds a press conference. Also present are Air Minister Power and Air Marshal Breadner. Immediately following his interview Wing Commander Gibson is off for a caleche ride with a CWAC and a Canadian airwoman.

He finds the two-wheeled horse-drawn conveyance slow compared to a Spitfire, but ideal for sightseeing. In the tension and excitement of the day, even the newspapermen forget about that perrenial bromide — Unlucky Friday the 13th.

Prime Minister Churchill and his daughter leave for an unannounced destination.

Saturday, August 14 A brief flurry of excitement occurs at the Clarendon Hotel, which has been taken over as headquarters for the press and government information officers, when a rumor is picked up that Premier Joseph Stalin of the USSR is on his way. It is unconfirmed.

Morning papers carry the news of Churchill's arrival in Niagara Falls and his subsequent visit to the United States. It is generally understood, despite the news blackout, that the British Prime Minister is conferring with President Roosevelt somewhere in the United States.

In the meantime at Quebec Prime Minister King entertains the press in honour of Mrs. Churchill at the Citadel. Also present are Canada's chiefs of staff.

Sunday, August 15 Prime Minister Churchill and daughter Mary return to Quebec. It is officially announced that he has been conferring with President Roosevelt at Hyde Park.

Monday, August 16 The Washington press gallery corps arrives, foreshadowing the coming of the President. Leading newspaper and radio writers of the United States join the Canadians and Britons who have been on the scene for a week or so. Canadian newspaper photographers and newsreel crews are joined by cameramen from the United States. Photographs are being transmitted by wire to Canadian and American newspapers by the international picture syndicates. Night and day the telegraph wires are busy with news stories. The Clarendon Hotel roars with activity. In the evening Mrs. Churchill, Prime Minister King and chiefs of staff of three countries attend a performance of the Army Show, Canada's soldier review.

A news story from Moscow explodes the rumor that Premier Stalin will attend the conference, stirring conjecture that the conference will emphasize plans for war against Japan.

Tuesday, August 17 President Roosevelt arrives in Quebec. Newsmen and photographers are first invited to attend a press conference in the council chamber of the Quebec City Hall. Col. Emmett O'Donnel, U.S. Army Air Corps, recalled from the Pacific theatre of operations, and Captain Gordon Hutchins, U.S. Navy, who has been in Europe, give thrilling descriptions of the war.

Following the interviews, reporters and photographers are invited to board a line of buses at the door of the hotel to go "on an important story". Their credentials are checked as they board the five buses, and off they go. A few minutes later they are at the Citadel and they know now, if they did not suspect it before, that the President will soon arrive. On the broad inspection grounds of the Citadel are drawn up units of the Royal Canadian Navy, the Royal Marines, the Canadian Army, the Royal Canadian Air Force and the R.C.M.P. band.

After an hour's wait whirring sirens forecast the approach of the President's car. Slowly it enters the grounds, followed by a car bearing Prime Minister Churchill and King. The long black sedan, with its top up, pauses briefly in front of the guard of honour while the British and American national anthems are played, then proceeds to the Governor General's wing of the Citadel, where the President will be a guest during his stay in Quebec.

Wednesday, August 18 This is the big day for photographers and newsreel men. Announcement is made that Prime Minister Churchill, President Roosevelt, Prime Minister King, the Earl of Athlone, Governor General of Canada, and Princess Alice, with the combined Canadian, American and British chiefs of staff, will pose for pictures.

As the cameramen arrive a small dog comes romping out on the lawn. Falla, the President's lively Scotch terrier, has come to hold the photographers at bay until the principals are ready to receive them. The famous little dog is photographed in scores of poses, and, finally, in the arms of an R.C.M.P. officer.

At a signal from the guards the group of more than twenty photographers moves up to the Citadel terrace to photograph the leading figures of the conference.

In the meantime a giant trans-Atlantic airliner has circled above the city and landed on the St. Lawrence River. Anthony Eden, British Foreign Minister, and Brendan Bracken, Minister of Information, have arrived. Both are welcomed to Canada on the Citadel terrace.

In the days that follow the Quebec Conference gets under way in earnest. To its deliberations are invited other United Nations leaders. Hon. T. V. Soong, Chinese Foreign Minister, arrives by plane from Washington, followed by Cordell Hull, U. S. Secretary of Foreign Affairs. Both are welcomed by Prime Minister King in his capacity as Secretary of State. A U.S. bomber brings U.S. Secretary of War H. L. Stimson. Sir William Glasgow, Australian High Commissioner to Canada, arrives from Ottawa. The next day Hon. Louis St. Laurent, Canadian Minister of Justice, extends Canada's welcome to Col. Frank Knox, Secretary of the U.S. Navy.

Welcome...

The Prime Minister of Great Britain is greeted by the Prime Minister of Canada. Mrs. Churchill and Subaltern Mary Churchill are seeing Quebec for the first time Sir John Anderson is hidden behind Mr. Churchill.

U.S.-CANADIAN JOINT FORCES SHARE OCCUPATION OF KISKA

EXTRA

Last Jap Aleutian Base Taken

Long Awaited Invasion Successful

By A. E. Perks
Star Staff Reporter

QUEBEC, August 21 — Canadian and United States Troops have occupied Kiska Island. The garrison escaped in fog according to joint statement by Roosevelt and Churchill this morning.

Prime Minister Mackenzie King issued the following statement this morning:

"The combined U.S. and Canadian military forces which have occupied Kiska were supported by naval and air forces of both countries.

"From the outbreak of war with Japan, all three Canadian services have shared with U.S. forces in the defence of Alaska and the Pacific Coast.

SEVERAL times daily a bell clanged through the corridors of the Clarendon, calling newsmen to a press conference. Here is the press room, with officials of Canada's Wartime Information Board, U. S. Office of War Information, Britain's Ministry of Information standing at front. U. S. — Canadian invasion of Kiska Island was being announced.

Meeting Quebec's Cabinet

Premier Adelard Godbout presides at a special meeting of his Quebec Province cabinet to greet Mr. Churchill, shown to left at head of table. Mr. King is seated at Mr. Godbout's right.

U.S. chiefs... Admiral William D. Leahy, chief of staff to President Roosevelt, stops to chat with Corp. E. C. Leveille, veteran of Royal Canadian Mounted. ***Below:*** General Brehon Somervell, chief of supply and service troops, U. S. Army, arrives at hotel among first of United States staff chiefs.

COMMANDOS RAIDED HERE IN 1760 ...

Vice-Admiral Lord Louis Mountbatten, newly-appointed supreme allied chief in southwest Asia, sees Wolfe's Cove where first commandos scaled cliff to the Plains of Abraham.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Eye Witness...

At press conference in Council Chamber of Quebec City Hall, newspapermen of Canada, Great Britain and United States hear war experiences of two American officers called to conference. Standing at desk is Colonel Emmett O'Donnel, United States Army Air Corps recalled from Pacific theatre. Seated at his right is Colonel W. McCarthy, United States Army and Captain Gordon Hutchins recalled from European theatre.

Men At Work..

In such a conference decisions were made which will decide the course of victory, for here are gathered the warrior chiefs of Britain and the United States.

Beginning at left side of table, nearest camera, they are: Lord Louis Mountbatten, Allied commander in southeast Asia: Sir Dudley Pound, then First Sea Lord: Sir Allan Brooke, chief of the Imperial Army General Staff; Sir Charles Portal, British chief of Air Staff: Field Marshal Sir John Dill, head of the joint staff mission in Washington; Gen. Sir Hastings Lionel Ismay, chief of staff to the British Minister of Defence: Brigadier H. Redmond, of the U. S. chiefs of staff secretariat: Commander R. D. Coleridge, of the Washington secretariat to the British chiefs of staff: Brig.-Gen. J. R. Deane, of the U. S. joint chiefs of staff secretariat: General H. H. Arnold, chief of the U. S. Army Air Corps: General G. C. Marshall, chief of the staff U. S. Army: Admiral W. D. Leahy, Chief of staff to President Roosevelt: Admiral E. J. King, commander-in-chief, U. S. Fleet: Capt. F. P. Royal, of the secretariat, U. S. joint chiefs of staff.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Above: Clad in his famous siren suit, Mr. Churchill obliges with an autograph.

Below: Gen. Arnold and Sir Charles Portal, Air Force chiefs, talk over a point.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Ovation..

For the people of Quebec, this was the happiest day of all for it gave them an opportunity to express personally their warm admiration for Mr. Churchill. In company with Mr. King, Britain's leader rode through the city in open car, greeted everywhere by scenes like this one.

Mr. Roosevelt and the Governor General.

HE has been here before, or so it seems because Mr. Churchill is playing guide to His Excellency, Princess Alice and Admiral Leahy. ↓

THIS PAGE IS DECLASSIFIED IAW EO 13526

Four British Officers: Air Commodore W. Elliott, R. A. F.; Col. A. T. Cornwall-Jones, Brigadier W. Porter, and Capt. Charles Lambe, R. N., at right.

Gen. Arnold and Lord Louis Mountbatten check the agenda.

Gen. Arnold and Gen. Somervell in pleasant mood leaving conference.

THIS PAGE IS DECLASSIFIED IAW EO 13526

C.W.A.C.'s Guest of Honour

Subaltern Mary Churchill was entertained by C. W. A. C. officers at luncheon at beautiful Montmorency Falls. Left to right, they are: Lt. Pierrette Dupuis, of Quebec; Cadet C. Kernan, of Quebec; Subaltern Churchill; Capt. Marcelle Paradis Paul; Lt. Carmen Murray, O. C. No. 9 Company, and Lt. Lorna Robinson, of Montreal.

On Guard

A ring of anti-aircraft guns swept the skies above the city day and night and a squadron of Spitfires stood ready at nearby Ancienne Lorette Airport to cope with an attack from the air. Even staff chiefs needed passes to enter buildings.

Lord Mountbatten, Sir Dudley Pound, Sir Allan Brooke, Sir Charles Portal, A/M Breadner, Sir Hastings Ismay, Sir John Dill, Admiral King, Gen. Arnold, Admiral Leahy, General Stuart, Admiral Nelles, General Marshall.

"Just one more picture gentlemen", pleaded the photographers, and the chiefs of staff of Great Britain, the United States and Canada held their positions for another shot.

The Planners...

THIS PAGE IS DECLASSIFIED IAW EO 13526

↑As they emerged from a session in Mr. Churchill's office at the Citadel, the camera caught the Prime Minister with Brendan Bracken and Harry Hopkins, presidential adviser.

Louis Baltera, Chateau Frontenac chef, was complimented on his cooking by Sir Allan Brooke, right, and Sir John Dill. Percy Hayward of the British staff is next to chef.↓

Those Charming Churchills

These Quebec girls recognized Mrs. Churchill as she returned with her daughter from a sightseeing jaunt in a caleche. The Prime Minister's wife gave several autographs.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Day Off!

FROM Saturday evening to Sunday evening the general staffers and a couple of hundred young conference workers took a day off, for a boat ride. The high officers are shown on the centre deck, while above and below them are Canadian and British Wrens, United States soldiers and Royal Marines.

Message to Women ...

A message from the Quebec Conference to the women of England was broadcast by Mrs. Churchill. Heard also over a network of Canadian stations, the address was beamed across the Atlantic and picked up by British Broadcasting Corporation.

Subaltern Churchill meets a Canadian WREN and CWAC, and American WAC.

Girls in Uniform

Quebec's Hamel sisters are shy with Mary Churchill.

THIS PAGE IS DECLASSIFIED IAW EO 13526

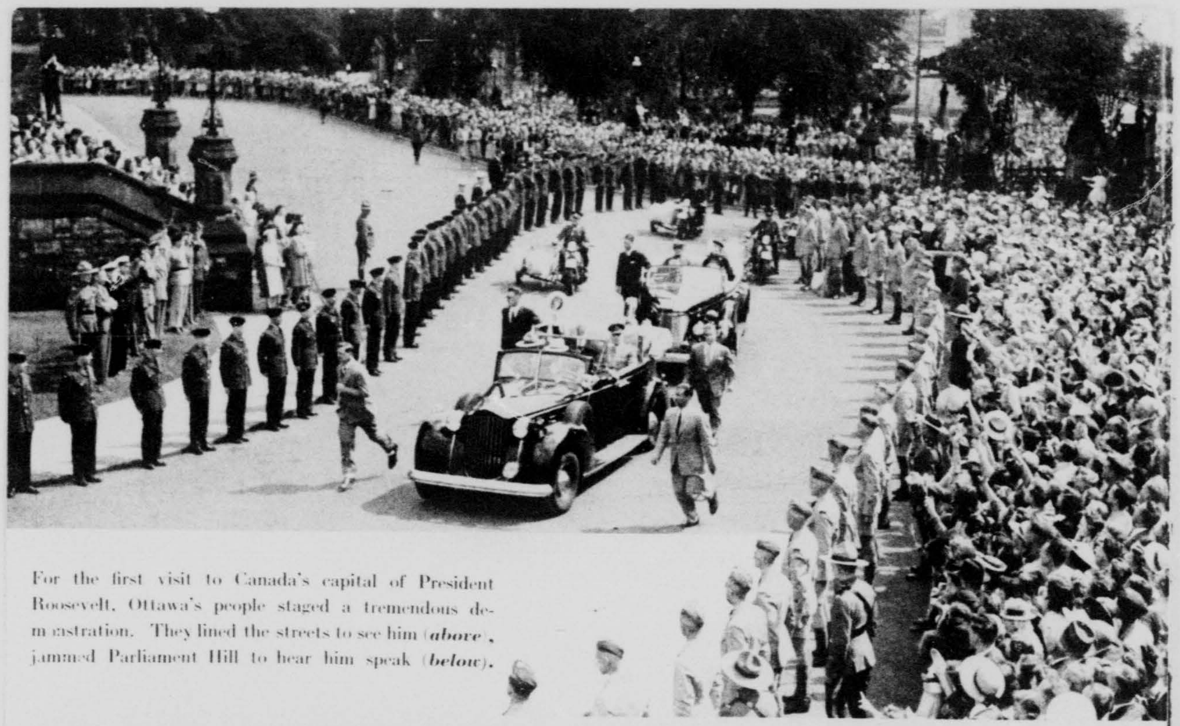
SUBALTERN Mary Churchill takes the salute in front of the Armouries at Quebec during a march past of Canadian Women's Army Corps units at a church parade to commemorate the second anniversary of formation of the service. ***Right:*** After the march past, Subaltern Churchill attended the service with the Hon. J. A. Mathewson, Provincial Treasurer of Quebec, and Mrs. Mathewson. They are shown here joining in the singing of a hymn.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Report

Mr. Roosevelt, Mr. King and Mr. Churchill faced a great press conference on the Citadel terrace. To the world they gave a message of a victory in the making. The President and Britain's Prime Minister praised Canada's war effort.

THIS PAGE IS DECLASSIFIED IAW EO 13526



Hold it . . .

MR. ROOSEVELT

Here are representatives of press and radio of the United Nations — Great Britain, the U. S., Russia, China, Canada — and cameras to record this climax in the conference.

THIS PAGE IS DECLASSIFIED IAW EO 13526

For the first visit to Canada's capital of President Roosevelt, Ottawa's people staged a tremendous demonstration. They lined the streets to see him (*above*), jammed Parliament Hill to hear him speak (*below*).

THIS PAGE IS DECLASSIFIED IAW EO 13526

Mr. Roosevelt comes to Ottawa

President Roosevelt speaks to the people of Canada from the rostrum at the Peace Tower.

Cum Laude

President Roosevelt receives an honorary Doctor of Laws degree from His Excellency the Earl of Athlone at a ceremony in the reception hall of the Governor General's residence in Ottawa. The Earl of Athlone is chancellor of the University of London.

THIS PAGE IS DECLASSIFIED IAW EO 13526

The War Cabinet

Last meeting held at Citadel was conference of Canadian War Cabinet and chiefs of staff. Mr. Churchill and Mr. King were co-chairmen.

Left to Right:

GENERAL INFORMATION

1. DIRECTORY

   a. This issue supersedes all previous issues which should be destroyed.

   b. Report all changes immediately to Telephone Directory Service, Extension 600, and mail confirmation to CIC Telephone Directory Service. This will facilitate better telephone service for all concerned.

2. INFORMATION

   Ask for "INFORMATION" to obtain numbers not listed in the Directory. When making inquiries, please give all detail information possible.

3. LONG DISTANCE CALLS

   All calls will be put through immediately unless the lines are busy, in which case the call will be booked and the operator will ring the caller back as soon as a line is free. If for any reason it is necessary for the person placing the call to leave the vicinity of the telephone, the booked call should be cancelled in order to prevent unnecessary delay to other calls.

4. PERSONAL CALLS

   Official telephones are not to be used for personal calls. Those desiring to do so, may use public telephone booths located in Blocks B, C and D.

5. REPAIR SERVICE

   a. For all faults, report the following to the "FAULTS CLERK".
      (1) Telephone extension.
      (2) Nature of fault.
      (3) Identity of person reporting fault.

6. [illegible] INSTALLATIONS, AND ALTERATIONS TO [illegible] INSTALLATIONS

   Complete appropriate pro-forma at the back of this Directory and send in duplicate to Headquarters Commandant. Additional copies of the pro-forma can be obtained from the office of the Headquarters Commandant.

THIS PAGE IS UNCALSSIFIED

Pocket versus Placket
'GOR-RAY'
Skirts
LOOK FOR THE 'GOR-RAY' LABEL.
The right kind of pocket, in the right place, on the right side . . . that's the 'ZWOW,' a feature of "Gor-ray" Skirts which particularly pleases smart women with the modern outlook. No ugly placket: no buttons or other fasteners to cause hip bulge or gaping, or otherwise spoil the line of that slim silhouette. Drapers and stores everywhere stock "Gor-ray" Skirts in a variety of delightful styles.
All the better for the 'Zwow' Pocket

Three Years a Prisoner of War: Miss Cynthia Elliot

Last autumn Miss Cynthia Elliot arrived back in this country after three years of captivity in Germany. She was captured in June, 1940, while serving in a mobile canteen unit with the French Army, and was posted as missing for three months before news reached England that she was a prisoner in German hands. With two friends, Mrs. Scott Hewitt and Mrs. M. L. Paterson, Miss Elliot nursed wounded British prisoners at Stalag 9, where many blinded men captured at Dunkirk were imprisoned. She went on the tragic repatriation journey, doomed to failure after ten days waiting at Rouen, and returned to Germany to continue nursing at Thuringen Surgical Hospital, Obermessfeld. She and her two companions were finally released by the Germans in September, 1943. Miss Elliot is the only daughter of the late Mr. Gilbert Elliot and Mrs. Elliot of Orchard Court, Portman Square, and is a relation of the Earl of Minto and the Earl of Southesk

WAY OF THE WAR

By "Foresight"

Canadian Admiral for London

One of Canada's most distinguished naval men is Admiral Percy Nelles, who has been appointed to London as Senior Flag Officer. He previously held the post of Chief of the Canadian Naval Staff

Surprise

THE landing at Nettuno has given a new and welcome turn to the Italian campaign. It may prove to be of a decisive nature. But this, of course, depends on the objectives the Allies have in view. If they mean to stop at Rome, smashing all the German forces in the south and containing those in the north, as some observers believe, then the prospects appear promising. Early success is not necessarily assured, and we must follow the example of the spokesman at Allied Headquarters. They have not shown any undue optimism, nor an inclination to show their hand in advance.

There is every indication, however, that the Germans were surprised by the landing. Only a few days before General Deitmar had told the German people in one of his broadcasts that every precaution had been taken to deal with any fresh landing on the Italian coast. If there was a German plan to deal with the Nettuno landing, there has been little sign of it so far. In any case, the most favourable moment for the Germans to have struck must have been before the Allied troops were able to widen and strengthen their new bridgehead. There is bound to be some very hard fighting in the near future, for the Germans cannot afford the Allies to reach Rome without a big battle. But in expressing the need for caution I must add that I am convinced that General Alexander and General Mark Clark, and the men under them, are equal to anything the Germans may do in their present plight.

Reaction

THE Argentine Government has at last broken off diplomatic relations with the Axis Powers, and this has naturally caused some relief and even rejoicing in Washington, followed by more sober reactions in London. It is difficult to believe that the refusal of the American and British Governments to recognize the new government of Bolivia, which has the backing of the Argentine Government against the majority of the other South American governments, was solely responsible for this change of heart. There must be some other purpose behind this very interesting diplomatic event. Internal affairs in the Argentine have been rather confused from the point of view of outside observers for many months. There has been the restriction on political parties as well as on the liberty of the Press, and other indications that the present Argentine Government had not much belief in democratic rule. If the diplomatic break with Germany can be regarded as a concession to popular opinion in Argentina, then we might expect other developments. But I doubt whether it is a concession to democratic pressure.

The Argentine Government is in a strong position. The food supplies of Argentina are valuable to Britain and gradually the financial position of the Argentine is strengthening. She is liquidating foreign holdings in the principal utilities at a rapid rate and is also creating favourable balances in London. Probably the Argentine Government visualizes a stronger position as a non-belligerent on bowing terms first with one side and then with the other. She has certainly given much latitude to Axis agents since the war started and if the break is complete it is a blow to Germany, if nothing else.

Members of the Line-Shooters Club Hold Their Second Luncheon in London

W/O. R. W. Green, formerly a prisoner, and S/Ldr. Learoyd, V.C., were there. Members of the Line-Shooters Club, when off duty, visit factories "shooting a line" about their work, and seeing aircraft of different types in the making

Air Marshal Sir Arthur Barratt, Line-Shooter No. 1, spoke at the lunch. Sitting next to him was G/Capt. Lord Willoughby de Broke. Air Marshal Barratt is A.O.C.-in-C. Technical Training Command

Sir Frederick Handley Page, managing director of Handley Page, Ltd., enjoyed a joke with his neighbour, Air Marshal Sir Richard Peck, Assistant Chief of Staff (General) at the Line-Shooters lunch

Diversion

IT will be some time before we can get a proper picture of the situation at the southern extremity of the Russian front where important, if not decisive, battles are being fought. The Russian propaganda, however, has steadily focused world attention on the northern battles around Leningrad which are undoubtedly of a fierce character. But these cannot be anything more but diversionary tactics. In other words, Marshal Stalin is endeavouring to distract the attention of the German High Command from the situation in the south by exerting heavy pressure in the north. There is every need for Marshal Stalin to do this, for the Germans are trying their utmost to hold up the Russian armies in their attempt to break through into the Balkans. If the Germans are successful in stopping the Russian advance for another six weeks, the thaw will give the Germans the breathing space they so badly want, and prevent a Russian advance for a long time.

Vision

VISCOUNT HALIFAX has delivered himself of one of those orations of statesmanship at Toronto for which he is so ably fitted. He has the appearance, dignity of manner, and a grave but not over-polished style of speaking which can be compelling. His theme was the future of the British Commonwealth, and in the course of his speech he urged the necessity for a common foreign policy and a common defensive programme among all nations of the

The Supreme Allied Commander, His Secretary and His Chauffeur

Private secretary to General Eisenhower is Capt. Mattie A. Pinette, W.A.C. She contributes largely to the smooth working of his working day, and can write shorthand at the rate of two hundred words a minute

Gen. Eisenhower has now assumed his command in Britain. His full title is Supreme Allied Commander of the British and United States Expeditionary Forces, organized in the United Kingdom for the liberation of Europe

Miss Kay Summersby, who is chauffeur to the Supreme Commander, is a British subject, and was born in Ireland. She has been with General Eisenhower in North Africa, Sicily and Italy

Empire in the future. He seemed to indicate that in his opinion this will be one of the main reasons in justification of Great Britain taking her place beside Soviet Russia, the United States and China, and thus claiming to be one of the four Great Powers. Apparently Lord Halifax was not speaking to a War Cabinet brief—it must be remembered that he is a member of the War Cabinet—but was merely exercising his right to think aloud.

After his speech, which has naturally caused a lot of comment in the Dominions as well as in the United States, Lord Halifax said in his usual and disarming way: "It's just an idea I have, and I want you people to think about it. All I know is that a problem exists—I don't know the solution." One possible solution proposed by Lord Halifax himself, and for which arrangements have already been made, is a meeting of all the Prime Ministers of the Empire in London. It will be for them to decide, not all at once, how all the Governments of the Commonwealth can work together after the war.

Warning

THE decision of Mrs. Corbett Ashby to stand as an Independent Candidate in the Bury St. Edmunds by-election should be regarded as a serious portent to those who have hitherto held the belief that the present coalition is blessed among all past and future governments. She is Vice-President of the Liberal Party, and Chairman of the Women's Liberal Federation. Her action must cause great embarrassment to the Liberal Party, and particularly to Sir Archibald Sinclair, the Liberal Leader, who is Secretary of State for Air. At sixty-one Mrs. Corbett Ashby thinks that she must give emphasis to the growing opposition to the continuance of the electoral truce. If our leaders are wise they will heed the emphasis of her action and consider the position. If they don't, the situation will become more embarrassing.

Success

THE Ripon by-election which saw the complete defeat of the Conservatives against an overwhelming Left-Wing vote, and resulted in the election of a Commonwealth candidate was a danger signal. The Commonwealth Party will certainly try to give Mrs. Corbett Ashby all the help they can. It is not certain that she will accept it. She wants to emphasize the necessity for ending the electoral truce, and not necessarily to assist the rise of Sir Richard Acland's party. Liberals—Sir Richard was once a Liberal—are notoriously unable to unite. The finest shades of differences disunite them, which is a pity. Mrs. Corbett Ashby is striking a blow for the Liberal Party. Sir Richard Acland is intent on creating his own party. He wants power. His early successes have justified his abounding self-confidence.

Mrs. Corbett Ashby's fight in Bury St. Edmunds will probably be the most conclusive test of the political situation, for it is a Conservative seat and the party organization should be up to date. If the combination of Mrs. Corbett Ashby and the Commonwealth Party organization can successfully overcome the Conservative advantage, then the Central Office will have need to worry.

Misunderstanding

APPARENTLY a lot of people have misunderstood my paragraph about the Royal Air Force being grounded "by tradition" on Christmas Day, for which I am very sorry.

Some of my readers have even gone so far as to read into it a suggestion that I meant that the Navy were left alone to handle the Scharnhorst. This is, of course, ridiculous, and not being true was not intended to be conveyed by me. The fact is that the Royal Air Force was not sent over Germany on a bombing mission on Christmas Day, which being repeated on the fifth Christmas Day of the war was something of a "tradition." Nothing more was meant than this.

General Smuts Meets Old Friends in Cairo

While staying at the British Embassy in Cairo with Lord Killearn, British Ambassador in Egypt, and Lady Killearn, General Smuts was entertained by his godson, little Victor Lampson, and his baby sister, Jacquetta. Last August Lord and Lady Killearn and their two children went to South Africa as the guests of General Smuts

MYSELF AT THE PICTURES

Concerning Twaddle

By James Agate

Somebody asking Charles the Second if he could explain why a particularly foolish preacher should be so popular with his audience, that most sensible of monarchs replied: "I suppose his nonsense suits their nonsense." Did I call Charles II our most sensible ruler? Yes, for I suppose his notion of a sensible way of living was very much the same as mine.

Application of the Merry Monarch's method of reasoning would make the way of the film critic a good deal easier. Nine-tenths of films are twaddle, and it is no use pretending they are not. The point is whether the film producer's kind of twaddle agrees with the critic's kind of twaddle.

I have been prompted to the foregoing by this week's two films, both twaddlesome to the *nth* degree. I liked one almost as much as I disliked the other, except that that would not have been possible. Here, again, a deep philosophical truth is involved, a truth first enunciated by the late Allan Monkhouse. This is that it is not so good to win as it is bad to lose—a principle which prevails on the battle field as well as at the bridge table. The golfer who has won his match on the last green has forgotten all about it before he has reached the club-house; the man who has lost is still rankling while trying to say in his ordinary voice: "That's enough soda, thank you." Applying all this to the cinema, I would say that it is not possible to like a good film as much as one dislikes a bad film. In other words, one's admiration for one's own twaddle is never on the level with one's contempt for the other fellow's twaddle. To cut the cackle, I liked *Johnny Vagabond* (London Pavilion) very much indeed; though not so much as I hated *Thousands Cheer* (Empire). All the same I am perfectly prepared to believe that the contrary view is possible.

Many years ago I remember a theatre party at Rules where the guests were John van Druten, Auriol Lee, Komisarjevsky, Peggy Ashcroft, Nelson Keys, Maurice Evans and an actress whose name I always forget but who plays trumps in Sunday evening shows. Van Druten sprang the new theory that the business of the playwright is to mirror the novel, whereupon Auriol said: "Hush, darling!" Van Druten, ostensibly modelling *Johnny Vagabond* on a story by Louis Bromfield, has modified his old theory so that it is now the business of the screen to mirror the novel. And, of course, the novel of Charles Dickens, to whose worst work the best of Mr. van Druten's so closely approximates.

Consider the lay-out, as outrageously sentimental as it is infeasible. In some one-horse American town back in 1906 one Vinnie McLeod, the elderly widow of the proprietor of a newspaper called the *Star and Banner*, still carries on with the aid of a staff of five, although she has to keep the paper going by pawning her drawing-room candlesticks! On which, with the usual Dickens touch, Ikey Moses Cheeryble advances more than they would fetch if sold outright. Because Vinnie once met Dickens, and because she finds a tramp reading "Pickwick," she must needs engage the young fellow, who hasn't had a wash for weeks, to remodel her newspaper and launch an attack against the forces of vice and graft, represented by the figure of Dougherty, the owner of the rival and prosperous newspaper.

Now it seems that this one-horse town runs to a brothel, and a pretty good brothel it, as Damon Runyon would say, you care for brothels. And there is a wonderful picture of Gashouse Mary (Marjorie Main—a superb performance), who is not in the least like Miss Missouri Martin, the proprietress of the Sixteen Hundred Club. It was Miss Missouri Martin who told Miss Billy Perry that if a guy loves a doll he will prove it with diamonds. "Miss Missouri Martin has many diamonds herself, though how any guy can ever get himself heated up enough about Miss Missouri Martin to give her diamonds is more than I can see." It was Miss Martin who put the blast on Miss Perry "for chasing a two-handed spender such as Dave the Dude out of the joint." Gashouse Mary would not have chased anybody out of her joint except maybe a guy who wanted to get fresh with the girls. How this kind of establishment can pay its way and remain entirely respectable is one of those mysteries which ever-proper Hollywood has not deigned to solve.

Well, there is your plot nicely started. After this there is a little mild gangsterism, with a good fight on the back seat of a buggy drawn by a pair of horses running away for no reason. Which brings me to the *pièce de résistance*. This is one of those torchlight processions with stuffed figures dangling from gibbets, placards and bands, which every one-horse American town seems to be able to organize at a minute's notice, though it must take Hollywood several weeks. In the end vice is defeated, Vinnie's newspaper is left in possession of the field, and there is a scene between the tramp and his patroness which is horribly reminiscent of Barrie in his drooling *The Old Lady Shows Her Medals* vein. In the end the tramp, who is none other than James Cagney, whispers to Vinnie (Grace George) that she is his girl and can look forward to occasional visits. After which the tears gather in Vinnie's eyes, now grown to the size of blackcurrant tarts. And the unseen band resumes Balfe's "When Other Lips and Other Hearts" with which it has been sickening us all the morning, and the curtains come slowly together. After the press view there was a moment's silence, followed by a noise which was either that of American soldiers overcome by emotion or highbrow critics overtaken by nausea. For myself, I left the theatre happily poised between the two.

About the Metro-Goldwyn-Mayer picture I find it difficult to say anything except that its twaddle is not my kind of twaddle. It seems to suffer from Hollywood's old delusion that the war, whether against Germany or Japan, exists merely for the purpose of enabling young American huskies to put on uniform and act as chorus to some crooning nitwit. The present film consists of alternate slabs of patriotism and necking, both in Technicolor. I am indebted to Synopsis for the story which begins as follows:—

> Kathryn Jones gives up a concert career to keep house at an Army camp for her father, the colonel, who has been separated for thirteen years from her mother. Kathryn hopes that, through her father, she can re-unite her estranged parents. At the station where she entrains for the Army camp, every one is saying good-bye to someone all except a lonely soldier (Eddie Marsh). He thinks he should kiss someone, since it seems to be a local custom, so he kisses Miss Jones! Later, at camp, he learns he has kissed the colonel's daughter! They don't get on so well because she is quite independent, whereas he is egotistical and dictatorial. He decides, to ease his inner pain, to join the air corps. Friends suggest he might accomplish this by getting "in good" with the colonel. To this, he adds his own touch: he becomes extremely nice to Kathryn; she'll help him, he thinks. This contact has repercussions—they fall in love.

And then it turns out that the soldier is a trapeze artist. Wherefore the young man breaks camp, rejoins his troupe, gives an aerial performance for the benefit of Miss Jones. He is court-martialled and in the words of Synopsis "The colonel comes in with the news that he and his outfit have been ordered overseas. Every one is kissing someone again, on the station platform. It's all right, this time, for Eddie."

Well, if that's the sort of twaddle you like you'll like this very much. *Thousands Cheer* has twenty-three stars and three bands. And it is compered by Mickey Rooney whose performance, as an actor, is steadily getting worse and worse.

5. *Claudin drugs Biancarolli (Jane Farrar), star of the opera, so that Christine may take her place*

1. *Musician Claudin (Claude Rains) is dismissed from the Paris Opera House orchestra. It is a serious blow, for he is financing the voice production of a young singer*

2. *The young singer, Christine (Susanna Foster) is loved by Anatole (Nelson Eddy), leading baritone of the opera*

3. *Claudin, desperate for money, offers his life's work, a piano concerto, for sale. Mad with distrust, he murders the publisher and is himself terribly injured when a dish of acid is thrown in his face*

"Phantom Of The Opera"

Nelson Eddy And Claude Rains In A Technicolor Thriller

The premiere performance of *Phantom of the Opera* at the Odeon, Leicester Square, tomorrow night, is to benefit Mrs. Churchill's Y.W.C.A. Wartime Fund. As President of the Fund, Mrs. Churchill is hoping to raise a minimum of £275,000 during the coming year. Last year contributions amounted to more than £200,000, but expenses are mounting as our lines of communication and supplies spread overseas and funds are urgently needed to enable the Association to extend its valuable work amongst women serving with the Forces. The film mixes murder with music. It is directed by Arthur Lubin and based upon Gaston Leroux's composition, "Phantom of the Opera"

4. *Claudin is a fugitive from justice. He haunts the Opera House and starts there a reign of terror*

6. *He murders a policeman placed on guard by Raoul (Edgar Barrier) of the Paris Sûreté*

7. *Finally, he forces Christine to accompany him to his hide-out. She is saved from death by the intervention of Raoul and Anatole*

The Theatre

By Horace Horsnell

Sid Field gives his audience an idea of how he intends to celebrate the declaration of peace

***Strike A New Note* (Prince of Wales)**

The nicest thing about this vociferous show is that the new note it strikes is so agreeably old. Hardly as old as the hills, perhaps, though possibly prehistoric, and certainly no later than the golden age of buffoonery. It is struck by Mr. Sid Field, the leading comedian, with a brilliance that makes the welkin ring.

Nine months ago, when the show itself was new to us, Mr. Field was a newcomer to the West End footlights. Not that he was a stranger to those of more northern latitudes. Such gifts as his are not fortuitous. They do not flower (though they may become locally famous) in a night. His London success was no fluke. He came to us a seasoned, first-rate comedian, and his réclame now matches that of our established top-liners.

His gifts are as personal as pronounced, and owe little to fickle fashion. For instance, he does not croon. His first imperative gesture as he smiles ingratiatingly at us over the footlights, is Cromwellian, and is directed at the complacent microphone that dominates the fairway, as who should say: "Take away that bauble!" He does not sing—much, and such dancing as he absurdly concedes is symbolical rather than slick. His patter is confidential but clean, and his make-up is not a formal disguise, but nature just lightly adorned. His bright loquacious eye and expressive smile would disarm misanthropy itself.

He specializes in caricature, and presents a kind of rogues' gallery of more or less artful dodgers—not cads, but convivial bounders—who range in type from a coster dandy in full cheap-tailored regalia to a golfing tyro fearsomely plus-foured, and less able than willing to fathom the mysteries of the links.

The first exhibit is a gem, a Cockney with ambitions to shine in vaudeville. This dressy dude from the Elephant is more accustomed to telling the tale than delivering the goods. Padded-shouldered, hobble-overcoated, and leering amiably under his rakish felt hat, he parades the footlights with a cock-of-the-walk self-confidence and the specious bravado of the bully who may bluster, but would not hurt a fly. And as he bluffs his way through that trial audition, a relentless heckler in the upper circle of the auditorium stings like a gadfly and prompts tu quoques that vindicate Mr. Field's nice mastery of Cockney argot and his professional skill.

His second exhibit is an unctuous virtuoso with a highbrow veneer and ingrowing accent, whose instrument is a nightmare xylophone even more treacherous than the technique it frustrates. Another heckler, promoted this time to a box, pursues the interruptive vendetta with disastrous success. There follow, at intervals in the general programme, Mr. Field's virile impression of an American lootenant, implementing instructions from his C.O. concerning the improvement of inter-Allied Service relations; his strayed West End reveller who gives us the festive works in faultless evening dress, and his egregious tyro golfer who takes his pleasures sadly, misconstrues each technical tip from his coach as a personal affront, and would rather pick wild flowers, or lie down and cry, than take his stance and drive.

This last is perhaps the broadest of the five delightful caricatures, though its comparative knockabout has a vein of true comedy gold.

Mr. Field has raised the flinch to a fine art, and gives exasperation the power of frenzy. His resilience is childlike in its spontaneous bounce. None of his turns is a second too long, and the quality of all is excellent. He is abetted by just the right stooges. Mr. Jerry Desmonde, who pilots him through the two auditions, the vaudeville and the golfing, is a staunch confederate, and Mr. Alec Pleon's punctuating hiccup, with its "Taxi!" recoil, brings the post-war West End nocturne poignantly up to date.

The show itself, you may remember, is high-tensioned and hot-rhythmed. Produced with resourceful cunning by Mr. Robert Nesbitt, it displays the zest with which our own rising generation can emulate the pep of American vaudeville. The soloists have the correct microphone mannerisms, husky virility and rasping grace-notes, the frenetic steps and gestures of the hotter school of swing; and the concerted numbers are well assembled and vigorously sung.

Both the rising and setting generations, whether Service or civilian, should find nothing to excite prejudice, but much to delight, in the brilliant buffoonery of Mr. Field, which is not that of an age but of all time. He is an artist and a comedian.

Sketches by Tom Titt

As a musical prodigy, Sid Field has much style but little skill. "What would you like?" he asks his audience

At golf he proves even less adept. He finds Jerry Desmonde's instructions confusing. "Address the ball?" he queries wearily. "What a performance!"

On and Off Duty

A Wartime Chronicle of Town and Country

Yugoslav Exhibition

There was almost a peacetime private view-day atmosphere about Burlington House at the opening of the Yugoslav Exhibition the other day by Queen Marie of Yugoslavia, and among the guests who accepted invitations from the British Council were many well-known, familiar faces. Queen Marie was wearing the dark-blue uniform of the Yugoslav Red Cross, and brought with her her younger sons, Prince Tomislav and Prince Andrei. Prince Tomislav was wearing naval uniform, his first appearance as a midshipman of the Royal Yugoslav Navy, to which his brother, King Peter, had appointed him on his sixteenth birthday a few days before. The royal party, which also included Princess Alexandra and Princess Aspasia, were received by Mr. E. Vincent Harris, deputy-president of the Royal Academy; Sir Walter Lamb, secretary; the Yugoslav Ambassador, and Sir Malcolm Robertson, M.P., chairman of the British Council.

Pearl Freeman / Harlip

Two Engagements Announced in January

Miss Mary Antoinette Moller, youngest daughter of Lt.-Col. A. A. Moller, M.C., Grenadier Guards, and Mrs. Moller, is engaged to F/Lt. Brian H. Julian, R.A.A.F., son of Mr. and Mrs. E. H. Julian, of New South Wales

Lady Margaret Dorothea Boyle, youngest daughter of the Earl and Countess of Glasgow, is to marry Capt. Oliver Payan Dawnay, Coldstream Guards, son of Major-Gen. Guy P. Dawnay, C.B., C.M.G., D.S.O., M.V.O., and Mrs. Dawnay

At the Academy

One regular visitor to the Academy in the old days whom I have not seen about town for many a long day was the Dowager Countess of Airlie, who is still Lady of the Bedchamber to Her Majesty Queen Mary. Looking remarkably well, Lady Airlie wore a close-fitting coat of Paisley with a small collar of beaver fur. A good many of her fellow-guests did not recognise her at first glimpse, for instead of the familiar Gainsborough hat which she almost invariably wore in the old days, when she was so frequently to be seen in attendance on Queen Mary, she wore a small, fur-edged, brimless toque. The Countess is no mean judge of the artistic, and her advice and counsel were frequently sought by Queen Mary in the days when Her Majesty was actively engaged in forming her collection of objets d'art and paintings. Rare among ladies of the Court, Lady Airlie holds the degree of Doctor of Laws, conferred on her at St. Andrew's University in 1933. Her son, the present Earl, is Lord Chamberlain to the Queen, but at present he is engaged on other duties—he is on active service with his regiment, The Black Watch.

The Brazilian Ambassador

Senhor Jose de Aragao, the Brazilian Ambassador, and Her Excellency his wife are rapidly becoming two very popular members of the Corps Diplomatique at St. James's. They have been entertained both privately and at semi-official functions quite a lot in the past few weeks. At the Overseas League luncheon they were guests of honour, together with members of the Embassy staff and the officers of the Brazilian Air Force Mission, which is at present in this country studying the training and fighting methods and tactics of our Air Force. Senhor Aragao has an excellent command of English. He speaks in a firm, clear voice and with impressive dignity. Quite rightly, he laid great stress on the important, but perhaps little realised, part which Brazil is now playing as an active warrior member of the United Nations, and gave some striking figures of the destruction of enemy submarines by his countrymen at sea, and of their preparations for, and hopes of, further successes. His Excellency is a connoisseur of good food and wine. He carries his own fat and fragrant cigars with him—a wise measure in wartime London.

All-Colour Film

It is hoped that the Duchess of Kent will attend the showing of Miss Rosie Newman's all-colour film, *The France I Knew*, which is to take place at the Dorchester on February 15th, and will have a second showing there on February 24th, which has been arranged to meet the demand for tickets. The Hon. Mrs. Philip Henderson is arranging the first presentation, which is in aid of Comforts for French Airmen and their families. The film opens with a record of life as it was in pre-war France, and ends, as Miss Newman saw it, in April 1940, only a few weeks before its collapse. In order to take the film, Miss Newman had to overcome many obstacles. Weeks of work were necessary to get the essential permits. She had to get these both from the Air Ministry and from the French authorities. Finally she ended up, she thinks, with many more permits than any other unofficial photographer.

Already Miss Newman, who is the sister of Sir Cecil Newman and of Mrs. Robert Grimston, wife of the Assistant Postmaster-General, has raised over £11,000 for the Red Cross and various other charities by the exhibition of her films on India, Egypt and Scotland, and of one which she called *Britain at War*.

Mrs. John Whitcombe

A recent bride, painted by Olive Snell, is the wife of Capt. John D. H. Whitcombe, H.L.I. She is a daughter of Capt. and Mrs. Geoffrey Sherston, and is serving in the W.R.N.S. in Scotland

Naval Wedding in London

Lt. H. E. G. Atkins, R.N., son of the late Capt. E. D. Atkins, and Mrs. Mackenzie, of Wellington College, Berks, married Miss Margaret Spencer-Nairn, daughter of Sir Robert and Lady Spencer-Nairn, at St. Michael's, Chester Square

Lord and Lady Bury's Daughter is Christened

Viscount and Viscountess Bury's second daughter was christened Rose Deidre Margaret by the Bishop of Shrewsbury at St. Paul's, Knightsbridge. She is seen here with her parents and one of her godmothers, Lady Margaret Stewart, eldest sister of Lady Bury

At the Three Hundred Party in London

The Three Hundred Party, the third of its kind, was held recently in aid of Paddington Tuberculosis Dispensary, and Lady Victor Paget (left) received the guests. With her above are Rear-Admiral Sir Basil Brooke, G.C.V.O., Miss Virginia Keiley and Lady Brooke

Christening

LADY BURY'S baby daughter, the Hon. Rose Deirdre Margaret Keppel, behaved with the greatest decorum at her christening at St. Paul's, Knightsbridge. She was fast asleep when she arrived in her nurse's arms and only woke when the Bishop of Shrewsbury was rather lavish in the use of the water, and then she just smiled. It was the first outing in the six weeks of her life, but she went through the entire ceremony with great calm and looked very sweet in her lace bonnet, with its loops of pink ribbon, and her lovely dress of Brussels lace and lace-trimmed family cloak of heavy white satin. Lord Londonderry was kept at the House of Lords, but was able to get away in time to join the tea-party at Londonderry House which followed. The godparents were Colonel the Hon. George Keppel, Lt.-Col. David McKenna, Lady Margaret Stewart, Lady Elizabeth Matheson, Miss Elizabeth Leveson-Gower and Mr. Henry Channon, M.P., but only the last three were able to be present in person. Quite a number of Lady Bury's Women Legion friends were there, and I saw also Lady Chaplin (who is down from Brora and living at 23, Chelsea Square), the Hon. Mrs. Richard Hoare, Lady Albemarle, Lady Cynthia Keppel, Mrs. Corrigan and the Hon. Mrs. George Keppel.

Personality Parade

SCHOOL holidays have come to an end, and after all the fun of Christmas it is a sad parting for both the children and their parents. At a London station I saw Miss Jane Leader saying good-bye to her young brother and cousin, who were returning to their prep. school. They are the niece and nephews of Mr. Jack Jarvis, the trainer of many famous winners, including Lord Rosebery's Blue Peter and his unlucky little mare Ribbon, who so nearly won last year's St. Leger. Miss Leader announced her engagement to Mr. Philip Liddel last December. Another racing enthusiast hurrying along a crowded platform that day was Major Jack Dennis, of the Life Guards, who in pre-war days was a very keen and successful amateur. He still has a few horses in training, though his military duties seldom permit him time to see them run. Also at the station was Steve Donoghue, winner of six Derbys and now a successful trainer. He was discussing racing with Mrs. Bennet, one of his patrons and the owner of several good winners. Also in London were the Fulke Walwyns, whose

Cdr. St. John Tyrwhitt, D.S.O., D.S.C., R.N., only son of Admiral of the Fleet Sir Reginald and Lady Tyrwhitt, married Miss Nancy Veronica Gilbey, only child of Capt. and Mrs. Charles N. Gilbey, at Brompton Oratory

Capt. Prince Paul Lieven, M.C., Royal Canadian Artillery, son of the late Prince and Princess Anatol Lieven of Russia, married Mrs. Margot Calvert, eldest daughter of Lieut.-Col. and Mrs. Homer-Dixon, at Little Missenden Church

Capt. Walter Scott, 1st The Royal Dragoons, only son of Major Sir Walter Scott, Bt., and Lady Scott, married Miss Diana Mary Owen, only daughter of Mr. and Mrs. J. R. Owen, at Holy Trinity, Coleman's Hatch, Sussex

Escaped from Italy: Lt.-Gen. Philip Neame, V.C., at Home

Husbands and Wives

Taking advantage of the confusion caused by the Italian capitulation, Lt.-Gen. Philip Neame, with two other British officers, Lt.-Gen. Sir Richard O'Connor and Air Marshal O. T. Boyd, made his escape from a prison camp in Italy. Gen. Neame, who won the V.C. at Neuve Chapelle in 1915, was captured with Gen. O'Connor in April 1941, and they were taken to the same prison camp. Details of their escape must remain a secret for the present. Gen. Neame and his wife are seen above at home near Faversham

Now Deputy Supreme Commander under Gen. Eisenhower, Air Chief Marshal Sir Arthur Tedder returned recently to Britain from the Middle East, where he had been since February 1943, as Air Commander in the Mediterranean. With him was his wife. Lady Tedder, a daughter of the late Sir Bruce Seton, was formerly Mrs. Marie Black, and married the Air Chief Marshal as his second wife last October

Air Chief Marshal Sir Arthur and Lady Tedder Arrive in England

Bertram Park

Air Chief Marshal Sir Trafford and Lady Leigh-Mallory

Air Chief Marshal Sir Trafford Leigh-Mallory and his wife were photographed at their home near Stanmore. Air Chief Marshal Leigh-Mallory, previously A.O.C.-in-C. Fighter Command, was appointed Allied Air Commander-in-Chief in December, and under Gen. Eisenhower will be in command of all the British and American air strength to be used in invasion. Lady Leigh-Mallory, daughter of the late Edmund Stratton Sawyer, works for the Red Cross in London. They have one son and a daughter, who is an officer in the W.A.A.F.

One Thing and Another

By D. B. Wyndham Lewis

"—*it's all right; it's one of ours*"

WHY George Gershwin's Rhapsody in Blue has been officially requisitioned for broadcasting to the German troops we wouldn't know, but it 's a curious Boche choice, don't you think ?

Some years ago, when the Rhapsody was in full blast, all the New York ship interviewers made it Question No. 2 for visiting notables, immediately following " What do you think of Our Skyline ? " Asked by mistake and feeling terrible, we said " The Rhapsody is the Very Spirit of Modern New York," and the reporter burst out crying and said " Hell, can't you think of something else ? Hugh Walpole pulled that one again last week," and we said " If it 's good enough for us and Hugh Walpole it 's good enough for Hearst and you," and the reporter dried his eyes and said " Is that real Scotch over there ? " and we said " Yes," and the matter dropped. Meeting Gershwin in due course, we mentioned our interpretation and Gershwin said thoughtfully " Yes, that 's certainly a swell idea," and we said " Has anyone thought of it before ? " and Gershwin said " Not a soul except the people of America, the American metropolitan and provincial Press, including the Paris Edition of the *New York Herald*, and 57 successive boatloads of visiting British lecturers," so we felt we were right about it.

Our conclusion was, and is, that they were all feeling terrible, and we put it down to the pickled peaches. As to the German requisitioning, the Boche probably thinks the Rhapsody will take the troops' minds off the wrecking of Berlin, being, so to speak, the Very Spirit—oh, we find we said it before.

Mirage

DROPPING the ever-ready tear over the news that the best-advertised shop in the Anglo-Saxon world—Pollock's, 73, Hoxton Street, London, N.—has closed at last, the Fleet Street boys, quoting Robert Louis Stevenson's flaming boost in *Penny Plain*, observed accurately that the modern child, alas, can't be bothered with Mr. Pollock's toy theatres, and especially with the cutting-out and manipulating of the brilliantly-coloured sheets of scenery and characters pertaining to such melodramas as *Sixteen-String Jack* and *Wreck Ashore*.

If the boys had looked up Stevenson more carefully they 'd have found him admitting frankly that after two days the thrill vanished even for him, and that he was apt to duck " the tedium, the worry, and the long-drawn disenchantment of an actual performance." This was our own infant experience with toy theatres long after Stevenson, and no psychological ass will be surprised to learn that for us this inhibition has carried over to the real thing. We love the theatre, the glitter and gilding and plush, the fat baroque Cupids, the mirrors and fiddles and footlights. What ruins the enchantment is the curtain going up to reveal a lot of little actresses, worked by (apparently) strings, dancing and making faces. Our old mentor James (" Boss ") Agate will probably agree that the Ideal Theatre would have no performances at all. Is that not so, Master ? Eh ? Oh, sorry. Our mistake. All right Sir. All right, all right, all *right*.

" *I've never mentioned it before Leslie—but quite frankly I can see no future in this* "

Serf

BOOKSY circles are shrilly discussing the extraordinary act of a London daily which suddenly started boosting its own book critic the other day in a special " display " ad. about six inches square.

Book critics themselves are simply dazed, we gather. The lowest, obscurest caste of newspaper serfs, spurned even by the lift-boy, parked and forgotten in shabby little hutches on the fifth or sixth floor, often denied even the spottiest, dumbest girl secretary, they are the Untouchables of Fleet Street. Naturally they are never admitted to the Presence, which is unaware of their existence except for some unhappy chance meeting. Then there is merry hell.

" Rackstraw."

" Yes, my lord ? "

" As I came down the passage just now I saw a kind of spectacled rat gibbering at me—what was it ? "

" Er—the book critic, my lord."

" Have it fired at once."

" Yes, my lord."

" Book critic ! *Book critic !* What the hell is a book critic doing in my office ? "

" Er—reviewing books, my lord."

" Do we review books ? "

" Yes, my lord, now and again."

" Why the hell, Rackstraw, am I not told these things ? "

In the end somebody else is fired and the Book Critic scuttles back to his hole, terrified. For however many publishers' ads. he may pull in by madly boosting their produce, the Ads. Manager scoops all the credit. Therefore when a paper starts actually boosting this type of outcast it looks pretty sinister and searing, and it wouldn't surprise us if all the book critics in Fleet Street cut their throats quite soon.

Standing By ...

(Continued)

Brawl

Mr. Jorrocks's comment on this notice in a Kentish weekly paper would be interesting :

> NATIONAL FARMERS' UNION
> KENT COUNTY BRANCH
>
> A FOX SHOOT
> organised by Goudhurst and adjoining parishes
> WILL TAKE PLACE ON
> WED., JAN. 26, 1944
> at 9 a.m. sharp.
>
> Every gun and beater will be urgently wanted. No dogs allowed.

Being the second historic Battle of Goudhurst, unless we err. The first took place *temp.* George II between the villagers, organised and led by an ex-soldier named Sturt, and a gang of mounted smugglers who had been terrorising the countryside, specialising in rape, torture, and plunder. Stripped to their shirts, with red handkerchiefs round their heads, yelling and flourishing carbines, pistols, cutlasses, and hangers, a hundred-odd smugglers swept down on the village one day in 1747 and found the men of Goudhurst grimly barricaded and waiting for them with muskets. After the smugglers' chief, a Mr. Kingsmill, had promised in odious language to roast the hearts of four leading local hayseeds for supper, a bitter engagement took place. The smugglers were routed and the survivors hanged. So sleepy, charming Goudhurst on its hill can raise an eyebrow at *(a)* any Western film-epic and *(b)* the Home Guard, and maybe does.

Footnote

It may have struck you when in Kent or Sussex that the direct descendants of those bloody-minded ruffians the 18th-century smugglers have very woozy, pacific, mild, and innocent rural pans indeed. Try fitting them, as we often do, with an imaginary pigtail, head-kerchief and earrings apiece, and see the rape and plunder in those cunning eyes.

Warlock

One of the private secretaries at the Ministry of Pensions is a conjurer and a member of the Magicians' Circle, a gossip reports. It helps him with his homework, no doubt.

The last native magician to mix in State affairs was probably Dr. John Dee, Elizabeth Tudor's Welch necromancer, who charmed away the royal hag's tooth-trouble by art-magic, among more disturbing feats. Like many Renaissance experts, Dee was drawn across the borderline between white and black magic and got on the Road to En-dor and had commerce with dark forces (and we invite those who think that *(a)* active sorcery exists no more, and *(b)* it is a rather naive, absurd business, to look up the Bordeaux scandals of 1925 and the comments of the eminent Parisian lawyer Maitre Maurice Garçon on the same). Most modern conjurers and illusionists wisely draw the line at sawing a lady in half, which is both pleasant and profitable, and morally harmless.

Ban

Witchcraft in these islands is practically confined at the moment to booksy girls, most of whom fly their own brooms. A P.E.N. squadron volunteered for active service with the R.A.F. in 1940, but the War Office decided the war was going to be hellish enough without this. Long-distance lethal curses on leading German publishers by means of the usual incantations and wax "mommets" stuck with pins have been banned because German female novelists might retaliate on Faber and Faber, the best-loved publishers in the world.

Oases

In a whimsy piece about railway junctions Auntie *Times* remembered Crewe and Leuchars and Bletchley but forgot two of the most fascinating European junctions, which are Clapham and Modane.

At Clapham Junction the great Chesterton spent many hours of meditation on major problems, including that of murdering a citizen in the third-class waiting room and getting away with it, a difficult feat. Clapham also is the stockbrokers' gateway to Paradise, or Brighton as some call it, just as Modane, before the R.A.F. bombed it to rubble, was the gateway to Italy. Reaching Clapham from Victoria on the pre-war Southern Belle, a lovely light came into the stockbroker's eyes as he pressed the bell and the tiny trusting hand beside him, starting on whisky and persiflage simultaneously. Reaching Clapham again from Brighton on the Monday morning, sterner light flamed in his eyes as he threw off the tiny trusting hand with an oath and opened his despatch-case; every inch a Man of Affairs, for Life is real, Life is earnest. As for Modane, it was there that you first sniffed the warm, soft Ausonian airs and felt the immemorial spell of Italy.

Auntie seems insensitive nowadays alike to magic, love, and murder. Maybe changing the old true-blue flannel undies for red has altered her? May be her bleak new buddies make her read Karl Marx all day instead of Ruby M. Ayres? We wish we knew, but not much.

D. B. Wyndham Lewis

"I'd go back to mother . . . if I knew where her unit was!"

"Ought to be a wizard party. Bags of booze and some smashing-looking totties!"

Bassano

The Chinese Ambassadress: Mme. Wellington Koo

Mme. Wellington Koo first came to London as a bride twenty-three years ago, when her husband was appointed Chinese Minister in Britain. She spent eleven years in France, where Dr. Wellington Koo was first Minister and later Ambassador, prior to his appointment as Chinese Ambassador in London in 1941. In Paris, Mme. Wellington Koo was regarded as one of the best-dressed women in society, and she is the possessor of a remarkable collection of jade jewellery. The daughter of M. Oei Tiong Ham, an East Indian merchant, she lived for many years in Malaya and Java, and speaks fluent English, French and Dutch. Dr. Wellington Koo has held one key post after another under the Chinese Republic since 1915, when he went as Minister to Washington; he has been Chinese Prime Minister and twice Minister for Foreign Affairs, later becoming China's representative on the Council of the League of Nations, of which he was President in 1937. The Wellington Koos have two sons, who are in America, both at the Columbia University, where their father was a former brilliant pupil

"Sic Itur Ad Astra": Three R.A.F. Celebrities

Air Vice-Marshal N. H. Bottomley, C.B., C.I.E., D.S.O., A.F.C.

Deputy Chief of Air Staff at the Air Ministry since August, Air Vice-Marshal Norman Howard Bottomley has seen many years of service at home and abroad. During the early part of the present war he commanded a bomber group, becoming Senior Air Staff Officer at Bomber Command H.Q., and previous to his present job was Assistant Chief of Air Staff (Operational). He started his career in 1914 as a Lieutenant in the 3rd East Yorkshire Regiment, becoming a Captain in 1916, was seconded to the R.F.C. that year, and in 1918 took a permanent commission in the R.A.F., relinquishing his Army commission in 1919. He subsequently served in Irak and in India, where in 1937 he was awarded the D.S.O. for operations in Waziristan, was mentioned in despatches three times, and received the C.B. the same year

Air Marshal [illegible] H. Tait, C.B., O.B.E.

Air Marshal Victor Hubert Tait, D[illegible]r-General of Signals since 1942, is a Canadian. Born in Winnipeg in 1892, he [illegible] to school there, and to Manitoba University. During the last war he served [illegible] with the Canadian Engineers, transferring to the R.F.C. in 1917, and joined the [illegible].F. on its formation. In 1930, Air Marshal Tait went to the Middle East on S[illegible] duties, and two years later was seconded for duties with the Egyptian Government [illegible]il 1940, when he returned to England and became Deputy Director and later D[illegible]r-General of Signals at the Air Ministry. Air Marshal Tait was awarded the [illegible]rdon Shepherd Memorial Prize in 1925

Air Marshal V. H. Tait, C.B., O.B.E.

Air Marshal Victor Hubert Tait, Director-General of Signals since 1942, is a Canadian. Born in Winnipeg in 1892, he went to school there, and to Manitoba University. During the last war he served first with the Canadian Engineers, transferring to the R.F.C. in 1917, and joined the R.A.F. on its formation. In 1930, Air Marshal Tait went to the Middle East on Signals duties, and two years later was seconded for duties with the Egyptian Government, until 1940, when he returned to England and became Deputy Director and later Director-General of Signals at the Air Ministry. Air Marshal Tait was awarded the Gordon Shepherd Memorial Prize in 1925

Air Marshal Sir Leslie Gossage, K.C.B., C.V.O., D.S.O., M.C.

Air Marshal Sir Leslie Gossage, appointed Chief Commandant and Director-General of the Air Training Corps, now occupies a new post, which has been created to mark and still farther strengthen the close association between the A.T.C. and the R.A.F. He took up his new duties on February 1st, the third anniversary of the formation of the Corps. Air Marshal Gossage has been A.O.C. Balloon Command since November 1940, coming to that Command from the Air Council, on which he had been Air Member for Personnel. From 1936 until the spring of 1940 he commanded the famous No. 11 Group of Fighter Command, who bore the brunt of the Battle of Britain, and later was for a time Inspector-General of the R.A.F.

Portrait Gallery

Mrs. Richard Pelly and Louise Sophia

Mr. and Mrs. Richard Pelly were married in 1941, and their daughter was born last October. Mr. Pelly, a cousin of the Duke of Beaufort, is manager of one of the foreign departments of William Cory, Ltd. Mrs. Pelly and Louise Sophia were photographed under the portrait of Sir Richard Hales (an ancestor of Mr. Pelly's) by J. Riley

Mrs. Ian Menzies and Malise

Before her marriage in 1937 to Major Ian G. Menzies, Mrs. Menzies was Miss Lisa Stöttinger, of Vienna. Her husband is the youngest son of the late Lady Holford, and is in the Coldstream Guards. Before the birth of her daughter, Malise Iona, in August 1943, Mrs. Menzies worked for the W.V.S.

Photographs by Tunbridge-Sedgwick

Right: In April 1939 Major Denis Griffiths married Miss Firène Leonard, youngest daughter of Mr. and Mrs. A. E. Leonard, of Brandeston Hall, Suffolk. They have two children, Davina, aged three and a bit, and Carol, getting on for two. Major Griffiths is at present working at the War Office

A World's Record

The holder is Her Majesty the Queen, because she is the only monarch in history who has ever led the whole field of a crack pack out fox-hunting *on foot*, and, what is more, done it across a heavy plough! The beautiful Elizabeth of Austria, as is history, went top of the hunt in Leicestershire, Cheshire, and so forth, many a time, but she was mounted on some of the best horses that ever looked through a bridle. It is, therefore, quite safe to claim this record for our King's Consort, because I am sure that even the farouche Boadicea can never have done anything like it during the time she ruled over that hard-riding tribe the Iceni, who lived where the place now called Exning is at Newmarket. It is also possible, I think, to claim a world's hunting record for the Heir Apparent, for she rode the pony which the Queen (then Duchess of York) led across that plough on April 18th, 1931, in the Pytchley country, a realm in which the former Prince of Wales and His Majesty the King were entered to fox-hunting under the guidance of Captain George Drummond, than whom few better men have ever crossed that formidable region. At the time of this occurrence H.R.H. Princess Elizabeth was three days short of being five years old, and so the recently-recorded incident was not the first time she ever went out hunting.

In the Army Now

Major Robert T. Jones, "Bobby" Jones of golfing fame, is now in London, attached to the U.S. Army Air Force as an intelligence officer. He won both the British and American Open Championships before the war

The Facts

As they appear to have been rather mixed up by some of the chroniclers, here are the right ones, straight from the mouth of someone who was there on that April 18th, 1931, and was, moreover, responsible for the Queen and her daughter getting that start of the whole Pytchley field. The following is the gist of some information given me by Captain Drummond, whom I met the other day. What happened was that Princess Elizabeth, with her mother holding her pony, was in a corner of Boughton Covert, and the fox which was there found could not have given a better performance, even if commanded, or, as Frank Freeman said: "If we had had him on a string!" for after he went away he passed right under the nose of the Princess's pony and jumped on to a wall, and, after giving his royal audience the once-over, made straight across the middle of the adjoining ploughed field, circling to the right before disappearing from view. Freeman laid his hounds on in a flash, coming straight to the royal and other holl'as. When the field debouched from the covert, they saw to their amazement, and probably too the annoyance of the hard thrusters, that they were being led by a lady leading a small child on a pony going best pace across the plough in the wake of hounds. The occasion was also, in a way, a sad one, for this was the last time that Frank Freeman ever hunted a fox, and it marked the retirement of the finest huntsman probably of a century, and the initiation of our most important little lady to the joys of the chase. Memorable happenings in the annals of fox-hunting!

More Hints for "Hunters"

Sitting at the jumps is one of those little technicalities which it is eminently desirable to acquire. There are many kinds of seat: wash-ball, tip-up, vulgar, impartial, sliding monkey-on-the-stick, and so forth, but only one that is of any use, the kind that tucks whatever it is you sit upon completely out of sight—if you know what is meant? You can only do this by long practice. But not a bad way is to imagine that you are riding bare-backed and want to put as much between yourself and the animal's most uncomfortable backbone as possible. Pay no attention to the directions given in *Horsemanship in Six Short Lessons*, and other tomes about the correct length of the stirrup-leathers. No two horses are exactly the same shape—you get the idea? A thing shaped like a beer-barrel on four pegs needs a different length of leather to one upon which you can almost make your two knees meet. Never look at the roots (of an obstacle); always about 2 ft. over the top. Best place for your hands is in your lap, never up under your chin, or even on your solar plexus. The Aussies have a thing called a monkey-strap on the front "D's" of their buck-jumping saddles. It would be a good thing to have this on just ordinary saddles, and pass the reins through it. The lower your hands, the higher the animal will jump. Always keep the chin tucked in as in box-fighting; it lessens the chance of breaking the neck. Never carry a cigarette-case in any waistcoat pocket: it aids the ribs to break. Finally, don't hop about like a pea on a drum when going in to a big place, or, in fact, to any place. Try carrying anyone who won't sit still pick-a-back, and you may gather what the horse thinks about it.

Hunting Language

If you know any new stuff it is always a kindly act to pass it on to the M.F.H., who may be running short. He is a very hard-worked

(Concluded on page 148)

Rival Rugby Captains

The Royal New Zealand Air Force (All Blacks) Rugby XV. met the South African Air Force team at Richmond. F/Lt. E. Grant (N.Z.) and A. Venniker captained the opposing sides. The New Zealanders won

An R.A.F. Operational Training Unit Rugby Team

The Rugby team seen here has won twelve out of their fourteen matches this season. On ground: A.C. L. Pearce, Sgt. W. F. Strachan, F/O. H. J. Morris, Sgt. J. A. Lewis. Sitting: F/O. S. A. V. Hilton, F/Lts. C. V. Brown, B. K. Williamson, F. R. C. Manning (captain), S/Ldr. J. D. Waine, D.S.O., D.F.C., P/O. L. J. C. Wigg, D.F.M. Standing: F/Lt. G. W. Gotam (referee), F/O.s T. J. W. Whitehead, G. K. Howe, P/O.s J. L. Stewart, J. G. V. Hodge, F/O. S. F. Meander, G/Capt. A. V. Hammond (president)

The Oxford and Cambridge Eights: to Race at Ely on February 26 — *D. R. Stuart*

The Oxford University Eight: (on ground) C. Hill (Winchester and B.N.C.; spare man), R. Ebbsworth-Snow (Bradfield and Magdalen; cox), J. R. L. Carstairs (St. Edward's and Christ Church; spare man); (sitting) J. M. H. Brooks (Radley and New College), Dr. K. Neville Irvine (coach and ex-trial eight), Francis de Hamel (Shrewsbury and New College; president and stroke), D. G. Jamison (Radley and Magdalen); (standing) M. L. H. Lee (Shrewsbury and Worcester), M. E. Whitworth Jones (St. Edward's and Trinity), R. T. T. Warwick (Bedales and Oriel), J. E. von Bergen (Radley and Trinity), G. N. Pointer (St. Edward's and Trinity)

The Cambridge University Eight: (sitting) C. G. W. Pilkington (Winchester and Trinity), Eric Farmer (coach), Thomas Wotherspoon (Shrewsbury and Trinity; president and stroke), Professor E. A. Walker (coach since 1940), Douglas MacLellan (Rugby and Pembroke; cox); (standing) I. H. Phillips (Trinity and Winchester), T. C. Sanders (Shrewsbury and St. John's), B. Thwaites (Winchester and Clare), L. J. Scott (Radley and Corpus), J. Twiston-Davies (Radley and Jesus), P. Nissen (Eton and Trinity), F. Jackson (boatman). Pilkington and Wotherspoon were members of the 1943 crew

"Past and Present": by "The Tout"

Having no National Hunt meetings to attend again this year, racing folk must content themselves by talking over old days, and hoping for a speedy return to better ones. Old timers will recall that forty years ago **"Tich" Mason** was the leading jockey over the sticks. I am glad to hear from **Capt. Percy Whitaker,** who was a crack amateur about the same time, that "Tich" is still going strong. "Percy," of course, still trains at Headquarters. **Jack Fawcus** was a front-rank professional "jock" before the war. He and old Southern Hero proved a popular partnership, winning many races, including two Scottish Grand Nationals. Jack is now a prisoner of war in Germany. **"Ruby" Holland-Martin** used to be a keen G.R. in pre-war days, and picked up several races on his grand old stayer, Evasio Mon. **Colonel "Perry" Harding** and **Lt.-Gen. H. Lumsden** were both in the first flight among soldier jockeys a few years ago. The latter has now gone out East as the Prime Minister's representative with General MacArthur

Pictures in the Fire

(Continued)

man and has little spare time in which to think up anything fresh off his own bat. Never drop your "h's" or your "g's." The real ones don't, only the "huntin,' shootin' and fishin'" chaps created by the concocters of musical comedy and "huntin'" films. The Climber, of course, does talk of the "bathin' and paddlin' and golfin' at Haylin' bein' toppin'," but *don't* take him as your pilot. "Tantivy!" is not a fox-hunting expression. It savours more of the coach-horn. Be very careful when you try to pronounce "Yoicks!" You may find that the expert omits the last three letters.

Captain Hamstrung

THE young "Hunter" of 1905 is sure to meet this præterpluperfect tense of bores, for he is immortal. The younger the "Hunter" the greater the certainty, for the captain is very clever at picking his audience. The student will have no difficulty in spotting him, even when not at the fox-chase, for he always walks duck-toed down either Pall Mall or the western end of Piccadilly, with a view to implanting the idea that he is so accustomed to wearing a pair of long, sharp spurs that he cannot divest himself of the habit, and thinks he might speedy-cut his socks if he turned his toes out. He always has (what he thinks is) a horse to sell, and he will inevitably try to crab the one you have told him you are thinking of buying. He will say: "Of course, you must please yourself, but if I tell you in strict confidence that *even* I would not ride him, you can draw your own conclusions!" This, of course, is strictly true, because the Captain could not ride one side of even a stuffed horse. A little story with a moral: "*You* don't think he is a honther, don't ye? Aah, but you wouldn't know!"

The Evening Feast

BE wary about your small-talk, especially with strangers. For instance, you may innocently remark to a lady who looks like a first whip, or an earth-stopper: "Are you coming with us to-morrow?" and you may incur the retort: "And *whoy* would I not be coming wid ye? Tell me that now!" You never know how many she may have had. Anyway, play for safety. She may be the toast of the Meath, or even of the Quorn. As to the rest, you being probably as tired as was your first horse; oysters with a glass of Chablis, a bit of pheasant with some of The Widow; perhaps a chaudfroid and a savoury, preferably with caviare, but nothing more, if you want to come out bright as the Koh-i-noor next morning.

On Active Service

Officers of an R.A.F. Station in Yorkshire

With Silent Friends

By Elizabeth Bowen

Family Life

THE novels of Miss I. Compton-Burnett have a quality entirely of their own. To enjoy them, you have to rid yourself altogether of the accepted ideas as to what is "lifelike" in novel-writing. The fact is that while Miss Compton-Burnett is sedate, orderly, almost Victorian in her manner, she has broken, unostentatiously and deep down, with almost all the conventions that adhere to the novel—at any rate, to the novel in England. Her characters, from the old people down to the children, are ageless and remorselessly articulate. Speaking out of a terrifying knowledge of themselves and of one another, they express what is generally left unsaid—unsaid by most of us not out of shyness or kindness, but because we have not yet realised that it is true. The setting is, in all cases, English family life, with its apparent prosaicness. You are fascinated, if also daunted, by the version of such a life that you find here. For under—and not far under—the homely surface are the violence of the Elizabethan tragedy and the sombre fatality of Greek drama. And, as in these, the characters are over life-size.

It would, however, be most misleading to suggest that the Compton-Burnett novels are in a tragic vein. They have a marked, if sinister, cosiness, and abound in comedy scenes. The latest, *Elders and Betters* (Gollancz; 9s. 6d.), deals with two groups of relations, the servants of one of the households, and a governess and her niece: there are no outsiders at all. At the start, the Donne family are first met moving into a new house; they have come to this country neighbourhood in order to be near Mr. Donne's two sisters—Sukey, who is unmarried and likely to die any minute from heart trouble, and Jessica, who is the wife of Thomas Calderon (author) and the mother of four children, Terence, Tullia, Julius and Theodora. Mr. Donne, himself a widower, also has four children—Bernard, Anna, Esmond and Reuben; and beneath his roof reside two unmarried ladies—his cousin, Miss Clara Bell, and Miss Maria Jennings ("Jenney"), who is the housekeeper. It is Jenney who acts as sort of interpreter between the Donnes and their two servants, Cook and Ethel. Of the Calderons' servants one does not hear anything; they must have been remarkably long-suffering, as in this house one sometimes sat down fourteen to lunch, and the meal was prolonged by family scenes.

Cook and Ethel are, in my view, the crowning and final servants of English fiction. In fact, they immediately give the lie to my statement that Miss Compton-Burnett's novels are not, in the usual sense, "lifelike." The arrival of Cook and Ethel at their employers' new house, and the Donnes' attempts to, one might say, butter their paws, are true echoes from what seems now an historic past. (The *time* of the novel, though not specified, cannot be later than 1913—social changes are not apparent, and everyone has much leisure.)

"Cook," says Ethel, with reference to their new sleeping quarters, "cannot sleep alone. She is of too nervous a type." And, later: "'There is a basement,' said Ethel, in a tone that added no more, as no more was necessary. 'We shall get used to the extra stairs,' said Cook, in a tone the more courageous for being faint. 'Oh, yes, you will,' said Jenney. 'You will run up and down without noticing them in a day or two.' She ran down herself, to show she had reached this stage. 'We can't get out of the basement without them,' said Ethel, putting the same thought in another form." And, "The two maids often exchanged a glance, a practice that does not encourage an observer, and in this case did so less than most." I could dwell on this couple indefinitely; their scene with the table, towards the end, is inimitable.

Villainess

IN *Elders and Betters*, as in the other novels, there is not a character who is not high-voltaged. But, as the plot (and there *is* considerable plot) unwinds, it is thirty-year-old Anna Donne who comes to stand out—for what one might call sheer psychological villainy. Having gained a legacy by burning the proper will, virtually murdered her second aunt and tricked her aunt's son into an engagement, our Anna remarks: "I expect I am still the blundering innocent that I always was." (Tullia Calderon, Anna's first cousin and future sister-in-law, shows signs that *she* might stop at nothing, before the end, but her affairs resolve themselves without actual crime.) The scene in dead Aunt Sukey's room between Anna and her Aunt Jessica has an appalling power rare in fiction to-day. The two fathers, Mr. Calderon and Mr. Donne, are painful exhibits—Florence, young niece of Miss Lacey (whom you will like), is well out of her engagement to the new-made widower. The junior group—lame Reuben Donne and Julius and Theodora Calderon (who conduct private worship before a rock in the rock garden)—can hardly fail to suffer—and well they know that they do! "Verily," says Julius, aged eleven, to his sister, aged ten, "we are having a unique childhood!"

Brilliant, serenely preposterous, and at the same time close to the bone of life, *Elders and Betters* towers, like all this author's novels, above the more "natural" chronicles that come out to-day. It has that rare thing, the authority of the master hand. To read it is an experience. Its felicities, as I expected, delighted me; its portraits of people from the complexion through to the very soul commanded my admiration, and the big scenes, for all their astringency, left me profoundly moved.

Fairy-Tale Sans Fairies

EUDORA WELTY, whose talent and name are striking, gave us, less than a year ago, a collection of stories (*A Curtain of Green*). These were so varied in style and subject as to suggest that Miss Welty could move any way she chose—harsh, shadowless comedy was within her command; but also mysterious crises of the soul. Her America—that of the Southern States—appeared as alternately bald and haunted. But the stories had always two

(Concluded on page 152)

P.E.N. Club Luncheon

Senhor Pascal Carlos Magno, Second Secretary at the Brazilian Embassy, was the guest of honour at a P.E.N. Club luncheon held in London recently. Senhor Magno has just written a book in English, "Sun Over the Palms." He is seen above with Miss Margaret Kennedy, the well-known writer and author of "The Constant Nymph"

CARAVAN CAUSERIE

By Richard King

I AM like an animal, in that when I feel ill I only want to creep into a hole and die. Briefly, I hate being fussed. Nothing raises my bodily and emotional temperature more than the soul-embittering argument around my sick-bed concerning my disinclination to drink a cup of tea, or some hot milk, or a glass of whisky; still less a nice cup of cocoa "*just to please me.*" Exhausted by the verbal combat, I usually sink back into the coma of deliciously peaceful misery, when, once again, the gentle knock on the door and—*up comes soup.*

No; when I feel ill, I like only to be left alone. Thus, when recently I became a sufferer from a bad cold in the head, which in conversation became influenza—since nobody is the least interested in a fat head and a running nose, while a mere cough has no dramatic value—I was not sorry that I happened to be staying in an hotel. It was very quiet and warm and comfortable in my bedroom, and the head-waiter, on his own initiative, sent me up a tumbler of hot rum and milk, leaving it outside my door without attempting the sympathetic chit-chat of a Ministering Angel. Unfortunately, just when I had begun to sip this unexpected luxury, the sirens blew their heads off. And another air raid had begun.

Now an air raid is never my idea of fun and games. It is even more baleful when the whole world, outside the radius of a fire, is as a plunge into the Arctic. I became a Tragedy King unto myself. I felt enveloped by doom. Courage deserted me. I resembled a worm who had emerged from the ground within the shadow of a hungry thrush. I swore as I sneezed. This, I said to myself, may be the last time I shall ever blow my nose!

Then, suddenly, in the midst of a lull between two ack-ack onslaughts, there came from the street below the crazy singing of a drunken man. "I donna wan ter set—(hiccup)—th' worl' on fyer," he sang. And no spiritual exhortation by the Archbishop of Canterbury could have been more efficacious. I found courage. I gained renewed strength. Let the sky rage. I would calmly await events. I was jumpy no more.

I lit another cigarette and drew closer to the fire. Kismet. What must be will be—and all that. And, as I smoked in comparative peace, I amused myself by thinking that help comes to us often by the queerest ways: that we never know when or how we are influencing others and they are influencing us—for good or ill. That when we are perfectly unconscious of being helpful we may be helping best of all. That sometimes an unpremeditated thought or word or action or look may achieve lovelier results than all our more cultivated best behaviour. That often we are loved for personal qualities, in which we take no conscious pride. Well, it makes you *think*, doesn't it? I shall always be very grateful to the singer who was drunk that night.

Getting Married

The "Tatler and Bystander's" Review of Weddings

Proby — Cripps

Capt. Peter Proby, Irish Guards, eldest son of Major and Mrs. R. G. Proby, of Berry Leas, Elton, Peterborough, married Miss Blanche Harrison Cripps, only daughter of Lt.-Col. and Mrs. H. H. Cripps, of Bagaretts, White Colne, Essex, at St. Mary Abbots' Church, Kensington

Read — Maclean

The marriage of F/O. James Frederick Read, R.A.A.F., son of Mr. and Mrs. Read, of Sydney, Australia, and Miss Della Maclean, daughter of Lady Maclean, of 10, Wilbraham Place, S.W., and of Drimnt, Tangier, took place at Holy Trinity, Sloane Street

Rowan — Love

Mr. Thomas Leslie Rowan, younger son of the late Rev. T. and Mrs. Rowan, and Miss Catherine Patricia Love, younger daughter of Brig. and Mrs. R. H. A. Love, of Woolavington Grange, Bridgwater, were married at Holy Trinity, Brompton. The bridegroom is private secretary to the Prime Minister

Dobbs — Guerrier

Right: Sub-Lt. Michael Conway Dobbs, R.N., son of Lt.-Col. R. C. Dobbs, C.B.E., D.S.O., of Omagh, Co. Tyrone, married Miss Peterine Guerrier, only daughter of Mr. and Mrs. A. Guerrier, M.B.E., of Seaview, I.O.W., at Compton Church, near Winchester

Latham — Smith-Masters

The marriage of Capt. John Latham, 60th Rifles, of Little Heath Wood, Herts., and Miss Margaret Smith-Masters, of the Ivy House, Chislehurst, took place in November at All Saints' Cathedral, Cairo

Hardiman — Smyth

S/Ldr. Robert James Hardiman, R.A.F., of Exeter, and Miss Annarella Smyth were married at Holy Trinity, Brompton. The bride is the daughter of the late Major-Gen. Sir Neville Maskelyne Smyth, V.C., and Lady Smyth, of Kongbool, Victoria, Australia

THIS PAGE IS DECLASSIFIED IAW EO 13526

ON AND OFF DUTY

(Continued from page 137)

training establishment is not far from Donoghue's; they were entertaining friends home from the Middle East. Mrs. Walwyn is managing her husband's stable while he is engaged on military duties.

Around London

At one London restaurant I saw Mrs. Simonds, who lately returned from the United States, lunching with her Etonian son, who was just about to return to school. Mrs. Simonds was Miss Molly Ramsden and has a lovely home in Berkshire. The Countess of Kimberley was another lunching at the same restaurant, warmly clad in a mink coat; Lord and Lady Willoughby de Broke were together, celebrating one of Lady Willoughby's rare visits to London. She organises the Y.M.C.A. mobile canteens in Warwickshire, as well as being in charge of their canteen in her village at Kineton, so her time is fully occupied. The Willoughby de Brokes' only son is now five years old and they have a daughter born last year. Visitors to the May Fair included Major-Gen. Laycock and his attractive wife, and Lady Abertay with two of her daughters, the Hon. June and the Hon. Rosemary Barrie. Lady Abertay has one of the loveliest homes in Scotland—Tullybelton, near Dunkeld, at the beginning of the beautiful Perthshire Highlands. She is intensely interested in the Perthshire Red Cross. Other visitors from Scotland have included Lord Alness and Air Cdre. and Mrs. C. Cadell, who have a most attractive home near Linlithgow.

Lineshooters' Lunch

The second luncheon to be held by the R.A.F. Lineshooters' Club, whose membership consists of airmen who have spoken at war factories in rest periods between spells of duty, was held recently, with Air Marshal Sir Richard Peck as guest of honour. The purpose of this club is to enable these airmen, who have had to "shoot a line," to keep in touch now and after the war. It is intended also that each luncheon shall include as a guest a member of the management of one of the factories at which members have spoken. Sir Frederick Handley-Page was present on this occasion.

It is probable that at these meetings there are grouped together in one room men responsible for shooting down more enemy planes than at any other gathering. Among those at this luncheon were Lord Willoughby de Broke (patron of the Club), S/Ldr. R. A. B. Learoyd, V.C., and W/O. Green, who recently escaped from a prisoners of war camp in Italy, where he had been since he was shot down in 1940. Flyers with Norwegian, Czechoslovak and Belgian flashes, and all wearing decorations, were seen among the guests, and there was one Malta night-fighter, F/O. John Baldock.

Good Work at Plymouth

The town of Plymouth owes a great deal to Lord and Lady Astor, who take a personal interest in all its activities. Among other things, they do everything possible to make life as pleasant as possible for the Service men and women passing through the town. Recently Lady Astor arranged for a section of the American negro choir to sing at the Union Street Y.M.C.A. Club, and much of the success of the King George Club for Officers is due to the Astors. Frequently they take personal friends to dine there.

Christening in Hampshire

Daphne, the small daughter of Dr. and Mrs. Nicholas Mansergh, was christened at St. Philip and St. James's Church, Fleet, recently. She is seen with her mother, father and brother Philip, who is three. Mrs. Mansergh is an Oxford Triple Blue. Her husband, who was formerly a tutor at the University, is now Head of the Dominions Section at the Ministry of Information

WITH SILENT FRIENDS

(Continued from page 150)

things in common: they kept inside the bounds of the possible, and their time was to-day.

Miss Welty may now perplex her admirers by having done something quite unforeseen. She gives us, in *The Robber Bridegroom* (The Bodley Head; 10s. 6d.), what *I* should describe as a fairy story—I am content to omit actual fairies. Grimm and Hans Andersen could but have looked kindly on this affair of robbers and lovely maid, of forest wanderings, of wicked and witch-like stepmother, of a rich green dress and long gold locks, of a berry-stained face and a concealed identity. The Mississippi and the Old Natchez Trace become, in these pages, enveloped in ageless magic. And Indians, with their incalculable revenges, take the place at once of ogres and gnomes.

Gentle Rosamond differs from the accepted fairy-tale heroine in two particulars only—her morals are easy, and she is a notable liar. She and Jamie Lockhart, that dashing cavalier-robber, marry towards the end, and live happily ever after, but they had not been doing at all badly before. A Cupid-and-Psyche romance in the robbers' fastness had been broken up by Psyche's kind of mistake—Rosamond had insisted on seeing her lover's features, so used a witch-lotion to wash the berry-stain off; whereupon Jamie dashed out into the night. To make matters worse, enter malevolent Little Harp, with his dead big brother's talking-head in a box. The Goat, witless accomplice of Rosamond's stepmother (ill-favoured Salome, who finally dies of dancing), promotes complications. In this manner does the innocent, crazy, naively blood-thirsty story wander its way along, less artless than it appears. Is not this myth-magic new to the New World?

As his foot touched shore, the sun sank into the river the colour of blood, and at once a wind sprang up and covered the sky with black, yellow and green clouds the size of whales, which moved across the face of the moon. The river was covered with foam, and against the landing the boats strained in the waves and strained again. River and bluff gave off alike a leaf-green light, and from the water's edge the red torches lining the Landing under-the-Hill and climbing the bluff to the town stirred and blew to the left and right. There were sounds of rushing and flying, from the flourish of carriages rushing through the streets after dark, from the bellowing throats of the flat-boatmen, and from the wilderness itself, which lifted and drew itself in the wind, and pressed its savage breath even closer to the little galleries of Rodney, and caused a bell to turn over in one of the steeples, and shook the fort and dropped a tree over the racetrack.

Holding his bag of gold tight in his hand, Clement made for the first inn he saw under the hill. It was all lighted up and full of the sounds of singing.

The Robber Bridegroom, a story told in this way, might well seem to be imperilled by illustrations. But James Holland's drawings prove him Miss Welty's other self. This should make an exquisite gift for a grown-up child.

"Clubbable"

The "Britain in Pictures" Series, with its excellent object of rendering a full picture of British life—past, traits, culture and habits—has done well to make the addition of *British Clubs* (Collins; 4s. 6d.). And Bernard Darwin has been a happy choice as the writer on this engaging topic. To begin with, his treatment has been wide:

It is important (he says) not to use the word "club" in any limited sense. When Kipps came suddenly into his fortune, one of his colleagues in the Emporium remarked: "One of those West End flats. That 'd be my style. And a first-class club." Those two expressions are often telescoped together, and newspapers love to talk with intense enjoyment of the opulent vision, of a "West End Club." Whatever is precisely contained within the four corners of that phrase, such an establishment makes but the tiniest ripple on the great and ever-spreading sea of clubs. Clubs do not only exist in one end of London. That which was once only for the elect is now for all, and everywhere the average man has his club. Each English small town has at least its British Legion Club, a friendly legacy from the last war, and the Rotary Club movement, an importation from the United States, is almost equally widespread, combining cheerful companionship with much good and charitable work in many directions.

Dr. Johnson spoke of Boswell as being "a very clubbable man." What is this instinct, or quality, in response to which clubs, of every kind, came into being? Mr. Darwin aptly defines and discusses it. Games or sport, learning—in fact, any common interest—or sheer sociability and the wish to be with kindred spirits, have accounted, he shows, for the start of clubs. He admits that in their continued life both exclusiveness and possessiveness play their part. He traces the growth of the club from the eighteenth-century coffee-house—the increasingly valued formalities, rules, traditions, springing up round what was, in the first place, informal and a matter of chance or choice. On the subject of London clubs—such as were, presumably, the hazy ambition of Kipps's Emporium friend—Mr. Darwin is anecdotal and interesting. And, being all-round, he is able to write as fully about Hambledon's original "Cricketing Club," and the West Kent Cricket Club, as he is of the expatriated Scottish golfer's Blackheath. Within the range of Great Britain he travels in time and space.

In the section headed "Enter the Ladies," we hear of a revolution. Mr. Darwin asks why ladies' clubs are so bleak: having never joined one, I share his intimidation. Are ladies too sharply aware of each other's presence? Mr. Darwin clearly opines that they have not learned to relax.

"Naval Occasions"

A privilege of the Royal Navy is to remain seated when drinking the Royal Toast. So far from implying any disrespect, this privilege is a reminder of the days of the old wooden walls where quarters were frequently so cramped that officers and men could not stand up without bumping their heads! The quarters are vastly improved today but the jealously guarded privilege remains.

AIR EDDIES

By Oliver Stewart

Jet Hero

I TOLD you so. My guess last week that the announcement of the successful development of jet propulsion for aircraft would be immediately followed by the discovery of a series of earlier jet-propulsion inventions dating back into the remoter past was justified almost before we went to press. Mr. M. J. B. Davy, who is the authority to whom we automatically turn on questions of early aviation history, has revealed that about the year A.D. 50 Hero of Alexandria described a machine demonstrating the principle of propulsion "by the reaction of jets of steam." In 1784 the Abbé Miolan attempted to apply the principle to the navigation of a hot-air balloon. Group Captain Whittle should be duly impressed. But personally I was disappointed that Mr. Davy could only take us back to A.D. 50 for the origins of jet-propulsion methods. Surely a little research in the great Pyramids, for example, would carry us to a much remoter time.

The Brab

THE announcement in the House of Lords that the preparation of two new civil aircraft is under way met with the widest approval. Personally, although I feel that the Tudor is extremely important as the aircraft that will have to bear the load in the immediate future, I was more pleased to read of the broad details of the "Brabazon" specification.

W/Cdr. R. N. Stidolph, R.A.F., was awarded the D.F.C. for skill, courage and resolution of a very high order. While piloting an aircraft attacking Stettin he encountered an enemy fighter, sustaining extensive damage which rendered one of his engines useless. He nevertheless flew his aircraft safely to a British airport. He has completed many attacks on Berlin, Hamburg and Dusseldorf

We do want an aim set before our aeronautical workers and it must be an ambitious aim. Aircraft of the size and style of the York and the Tudor are necessary, but aircraft like the Brabazon give that special zest to aviation which makes it so absorbingly interesting. If we in aviation are ever satisfied with developing the practical aircraft of a given period and if we cease to look towards the remoter future we can infer that aviation is growing old. The whole Brabazon project—an immense tricycle undercarriage aircraft which can be driven by orthodox power units or might in the remoter future be furnished with jet-propulsion units—is a powerful stimulus to thought and work. It is good also to see that it bears the name of one who has worked hard in this field and whose ideas have always been markedly original.

Mustangs

NOTHING is more interesting than to watch the gradual ebb and flow of fighter technical superiority. In the Battle of Britain, Britain was technically superior to the enemy at any rate at the beginning, and if one measures air performance by the early Spitfire. Then came the period of more even balance in which the technical struggle rose to a high pitch. Judging from such details as are known of it and from some of our own pilots' reports upon it, the Focke-Wulf 190 enjoyed a period of superiority. Now the Mustang takes the centre of the stage. It is a curious mixture of British and American aeronautical technique. Designed to a Royal Air Force specification and fitted with an engine designed by Rolls-Royce but built by Packard with an airframe entirely American, the Mustang earned from the first the highest praise from British pilots. It proved robust, handy and capable of high performance. It was regarded as sound for maintenance in the field. It was capable of taking progressively heavier armament and now it can go away with such a large auxiliary tankage as to allow it to do escort duties for bombers making the deepest penetrations into Germany.

The Air Ministry or Ministry of Aircraft Production (I do not know which is responsible) is curious in the way it releases information about enemy aircraft. The chaser bomb details, for instance, were suddenly released by the *Aeroplane Spotter*, though whether the facts were acquired from official sources or not I do not know. But details of the latest German aircraft which have human pilots are not released. There may be good reason for this reticence, but it makes it hard to weigh accurately the relative merits of our own and enemy machines.

The 293

THE German chaser bomb is described as the Henschel 293 and it follows almost exactly the pattern I once ventured to sketch out in these pages. It is a rocket-driven, miniature aeroplane carrying an explosive charge. It can be radio-directed but it can also be set on a course and maintained upon it by automatic pilot. It follows, in other words, exactly the lines that would be expected from a theoretical study of the subject and is not really vastly different from the kind of chaser bomb proposed and experimented with in the war of 1914-18. So although we cannot yet trace the Henschel 293 back to Hero of Alexandria no doubt we shall soon be on the way. One imagines some ancient siege engine being dragged out of oblivion to demonstrate that the ancients catapulted cannon balls with wings on at one another.

Meanwhile the chaser bomb appears to be in very small use. It seems to be used against shipping in the main. If it is really in large-scale production we should expect it to be more widely applied in the future. But there is no need as yet to worry overmuch about the bombardment of cities by chaser bombs on a really big scale. It can be assumed that some time will have to elapse before German production of this weapon is going at full speed, and we can be sure that the factories wherever they may be are not forgotten either by Bomber Command of the Royal Air Force or by the Eighth United States Army Air Forces.

BUBBLE & SQUEAK

Stories from Everywhere

IKE was in financial trouble, and he went to his old friend Benjamin for help.

"I want you to lend me a thousand pounds," said Ike.

"No," was the reply Benjamin made. "Definitely no."

"But Ben," protested Ike, "when Wall Street crashed in 1929, who lent you five thousand pounds to keep you going?"

"You did," admitted Ben.

"And later, when your wife had that serious operation, who lent his house in the South of France for the whole season so that she could recuperate?"

"You did, my friend."

"And who saved your life five years ago when you fell out of the boat when we were fishing together?"

"Oh, you did, Ike."

"Well, then, Ben, why won't you lend me a thousand now?"

"All the things you say are true," said Ben, nodding his head slowly. "But what have you done for me, lately?"

HE was most incredibly drunk, and the constable was finding it hard work to get him to the police station. It was actually only a few hundred yards, but to the arm of the law it seemed miles.

Several times the inebriate fell down flat, dragging his captor with him.

At last, breathless, covered with mud, the constable managed to drag his captive up the steps of the station.

As they lurched through the door, the drunk muttered: "Thanksh, ole chap! Get me inshide quick—before the copsh shee me!"

A MAN who was very keen on his garden was justifiably proud of his very fine lawn. But one year the lawn had a terribly heavy crop of dandelions. He tried everything he had ever heard of to get rid of them, but with no success. At last, in desperation, he wrote to the Department of Agriculture telling them all about it. He gave a list of all the remedies he had tried and ended his epistle with: "What shall I do now?"

In due course came a reply: "We suggest you learn to love them."

FROM "Peterborough's" column in the *Daily Telegraph* comes the following:—

An American Air Force colonel stationed in England was explaining with satisfaction how he had shot three pheasants on his airfield.

"Good heavens!" exclaimed a horrified English listener. "You can't do that—that's poaching. You'll get fined or gaoled for that in England."

The American hesitated a fraction of a second. "Well," he drawled, "I guess I shot them for pecking at my aircraft."

Joyce Grenfell, *the very gifted artiste and writer who has made such a name for herself on the British stage with her brilliant monologues, is shortly leaving this country to entertain the Allied Forces in the Near East. Miss Grenfell is a niece of Lady Astor*

THE anxious father had been pacing the room for hours and at last the old family doctor came in with the words: "It's a boy!"

The newly made parent sank down into a chair and sighed with relief.

"And is the child all right?" he asked anxiously.

"Well," replied the doctor, with a twinkle in his eye, "he hasn't got all his toes on one foot."

"Oh, heavens!" moaned the other. "I've always dreaded that the child would be malformed."

"Of course he hasn't got all his toes on one foot," proceeded the doctor with a grin, "he's got five on each!"

HITLER, it is reported, attended a big banquet to prepare which two French chefs were specially brought from France.

Before the banquet began Goering proposed a toast: "To that genius, our Fuehrer, who sees everything, hears everything, and knows everything."

The first French cook turned to his colleague and whispered: "I bet he doesn't know I've put castor oil in his soup!"

A YOUNGSTER was asked by his history teacher to name the principal cultural contribution of the Phoenicians. The answer, given without hesitation, was "Blinds."

HEAVY NAZI LOSSES IN ANZIO

He came back to tell a great war-time story

LT. S. W. CHANT, Gordon Highlanders, who has just been repatriated, is the first commando to return from the St. Nazaire raid with the full story.

UNARMED, THEY FOUGHT ON IN ST. NAZAIRE

Not One of the "Do-or-Die" Commandos Came Home

TO-DAY, FOR THE FIRST TIME, THE OFFICIAL STORY CAN BE TOLD OF SOME OF THE FIGHTING IN ST. NAZAIRE AFTER THE DESTROYER CAMPBELTOWN HAD RAMMED THE DOCK GATES ON MARCH 28, 1942.

None of the Commando troops who went ashore under the command of Lt.-Col. Newman to demolish dock installations returned to Britain at the time.

—SPANISH U-MEN—

ST. NAZAIRE will be the subject of a question in Parlia-

U.S. BOMB SIX MORE JAP BASES

AMERICAN planes have pounded six Japanese positions in the Marshall and Caroline Islands, it was officially announced in Washington last night.

Admiral Chester Nimitz described the attacks as supplementary to the major strikes on Truk, the key Japanese base in the Carolines, and Eniwetok (Marshalls).

Liberators, Dauntless dive-bombers and Warhawk fighters attacked four atolls in the eastern Marshalls, and Liberators bombed Ponape and Kusaie, in the Carolines. Ponape is about 400 miles east of Truk.

Tokio spokesmen claimed that the American attack on Truk was the first step in a drive to regain the Philippines and that the war in the Pacific had entered a decisive stage.

Tokio said yesterday that U.S. warships and planes had bombarded the Marshalls group island of Taroa.

Allies Say Line Holds: Berlin Claims Big Breach

AS THE ALLIES HOLD GRIMLY TO THEIR LINES ON THE ANZIO BEACHHEAD, KESSELRING'S MASSED FORCES—IN SPITE OF HEAVY LOSSES—ARE MAKING A SUPREME EFFORT TO DRIVE THEM BACK.

While a late B.U.P. report last night said that in face of their terrific losses the German attack was petering out, Berlin and Rome broadcasts claimed that the Nazis had made a deep penetration of the beachhead. The Germans said they were only three miles from Anzio harbour.

There is no Allied confirmation of the Nazi claims, and Mr. Robert Patterson, U.S. Under-Secretary for War, said yesterday at Dallas, Texas, that the situation was in hand and the prospects promising.

"There is no doubt at all about our ability to hold the beachhead," he added.

Kesselring's great thrust on Anzio, according to the B.U.P., began to crack before Allied counter-attacks in which some of the biggest tank battles of the Italian campaign were fought.

The latest Allied communiqué on the situation in the beachhead is brief but reassuring. It says:

Against the Fifth Army positions in the Anzio beachhead the enemy continues to hurl troops and tanks.

Enemy losses have been heavy. Our lines are intact and we have launched several successful local counter-attacks.

The communiqué also adds that in the Anzio area gunfire support from the Navy has continued.

Withering Fire

Kesselring's new hammer blows have been met with withering Allied fire, which is taking a terrific toll of the attackers.

Nowhere, a late message from the Beachhead said last night, has the enemy come up against the Allied bristling main defences.

The two armies are locked in a desperate close-range tussle, on flat ground with few natural cover-points and both in the air overhead and in the sea off the beachhead the struggle is also being waged relentlessly.

The Allied air forces are doing their utmost to overcome the handicaps of the weather and the

55,000 were Killed in the Trap

RUSSIANS WIN 100 NEW PLACES

MARSHAL STALIN has thrown a complete new army into the great North Russian battle for Pskov, gateway to Latvia and the Gulf of Riga.

Released by the fall of Staraya Russa, on the front south of Lake Ilmen, it joined yesterday with the armies of General Govorov and General Meretskov in a triple race to the west.

Last night the Moscow communiqué announced the first successes of the combined thrust—the capture of more than 100 places, including the railway station of Magovskaya - Kuleviya and the town of Plyusa, 42 miles south-west of Luga.

Heavy bomber raids on Pskov were also announced.

The communique gave the latest figures of German casualties in the Kanyev pocket, west of Cherkassy, where ten enemy divisions were trapped, as:

Killed, 55,000.

Taken prisoner, 18,000.

In the raid on Pskov dozens of military trains crowded at the junction were effectively bombed.

"About 80 fires were observed," it was stated. "They were followed by large explosions. More than 15 trains were seen to be ablaze. By the end of the raid the whole area of the junction was a mass of fire.

"In addition German military depots and an adjoining aerodrome were bombed. Three of our aircraft are missing."

Far to the south the Germans are steadily losing ground in the battle to hold Krivoi Rog, their last great fortress in the Dnieper Bend.

Deep Breaches

"At Krivoi Rog the enemy in-

London Beat Fire Raid Trick

BERLIN radio boasted R.A.F. "pathfinder" technique to describe—for overseas consumption only—their unsuccessful attempt to fire London in the early hours of yesterday.

"Targets were indicated by flares and demarkation signals with the result that our bombers, coming in from all directions, were able to drop their thousands of bombs and incendiaries with precision," said the announcer.

Hundreds of bombers took part, said a pilot called to the microphone to give an eye-witness account of the attack. This is what he said:

"Over London, all the defences concentrate their fire on us. The sky is lit up with exploding shells.

Let Them Go

"Achtung—let them go. The bombs have gone. Two large bombs with a large number of flares have been dropped over the target, which is lit up through a patch in the clouds.

"Almost from all sides enemy night-fighters are converging upon us. This is surely the most

LATEST NEWS

NEW SOVIET ARMY APPEARS

On Northern front complete new Soviet Army, released by fall of Staraya Russa, has joined race for Pskov, says Harold King, Reuter Special Correspondent.

M.P.

He will ask Mr. Eden, the Foreign Secretary if he knows anything about Spanish sailors' being recruited for service in U-boats.

He wants to know particularly about the 100 Spaniards now being trained in the submarine school at St. Nazaire.

U.S. EXPOSURE OF 'PEACE NOW' DRIVE

By DOROTHY THOMPSON

IN the present relative lull of military operations many domestic issues are arousing disproportionate interest.

The "Peace Now" movement, about which I wrote some weeks ago, has had a blow to the midriff with the revelation this week that one of its most active workers is a pro-Nazi Norwegian, who arrived here in 1940, and who is not, of course, an American citizen.

The Norwegian, John Albert Collett, was, it turns out, issued with a passport by the Nazi-controlled police department of Oslo, and came to this country via Russia, at the time when the Soviet Union had a pact with Hitlerite Germany.

Nazi Peace Drive

It is pointed out that the Nazi drive for a negotiated peace coincided almost exactly with the setting up of the "Peace Now" movement.

As I have said before, the movement is negligible. It has, it turns out, only 2,000 members, and has collected less than 3,000 dollars (£600).

Deplorable as it is that such a movement could be founded here, its failure, together with the revelations about Mr. Collett, are clear demonstrations that it has no resonance in the country.

Dorothy Thompson's U.S. cable.—Page 4.

—TO-DAY—

DOROTHY THOMPSON, brilliant U.S. commentator, writes to-day (on Page 4) about the dream of every soldier—returning to rebuild their homeland in the spirit of comradeship they found and shared at the front.

Other notable contributors to this issue are :—

To ensure getting your copy of "The Sunday Chronicle," place an order with your newsagent.

Until now there was no full report on the results of the raid, although great explosions were heard, and it was known that some troops had accomplished their tasks before they were taken prisoner or killed.

Now, a repatriated prisoner of war, Lieut. S. W. Chant, of the Gordon Highlanders, who was in command of a demolition party, has returned to tell his story.

This account of his adventures told to Combined Operations Headquarters throws light for the first time on some of the fighting in the docks and streets that night at St. Nazaire.

"I was on board the Campbeltown in command of the demolition party detailed to blow up the pumping station of the dry dock," says Lieut. Chant.

"A roar of guns had opened up on the destroyer from the banks of the Loire, and by the time she reached her goal, jammed in the dock gates, I estimate that 75 per cent. of those on deck were casualties.

"Most of the wounded managed to get ashore. I myself had two shrapnel wounds in the right arm and left leg, and these slowed down my movements.

"We could hear the sounds of battle on the roof while we blew in the steel door and descended the steel staircase.

"Forty feet below ground we laid our charges. My hands had been cut with small pieces of shell which made the handling of the charge somewhat awkward, but Sergeant Dockerill stayed with me in case my wounds would prevent me from firing the charges while I sent the rest of the party upstairs to warn the neighbourhood of the coming explosion.

Pumping Station Blown Up

"We raced outside and lay on the ground, completely exposed on the concrete paving. Fortunately we shifted a further ten yards away a second later; when the explosion did come huge concrete blocks hurled through the air perilously near.

"While I was blowing up the pumping station, Lieut. Smalley and his party reached the winding station nearby, laid their charges and completely destroyed not only the winding gear but the entire building.

"The northern dock gate and the winding station controlling it were completely wrecked by several parties; the southern gate had already been effectively destroyed by the Campbeltown.

"Not so fortunate were the parties detailed to attack the bridges and gates of the new entrance. They were mostly either blown up in their M.L.s before reaching the Old Mole or were prevented from landing because their M.L.s were hit, set on fire and out of control. Those that did reach shore were subjected to heavy fire.

Corporal Saves Captain

"To give an example of the difficulties of these parties, Captain Burn, on board an M.L. which was hit and blown up, was thrown into the water and started to swim to the Mole, but was fired at with the others and had to duck repeatedly.

"He was very tired and would have drowned had he not been helped by one of his N.C.Os, Corporal Arthur Young, who, swimming to him, grabbed him by the hair and dragged him along until he reached the Mole.

"When they did get on to the Mole, there were but a few of the original party and they had lost most of their arms in the explosion.

"All this time my own party had had no interference from the enemy, thanks to excellent protection afforded by our covering

3 BOYS DEFY MARINES

THREE boys, aged 12 to 14, defied a platoon of Marines for two days and a night in the Welsh mountains around Cader Idris.

They surrended, under cover of a white flag, only when they were reduced to the last two cartridges out of 400 rounds of ammunition which, with three rifles, they had taken from a camp near Barmouth.

When the theft was discovered on Thursday a batman was sent after the boys. Bullets started whizzing around, so he called in the regimental police.

They in turn retired in face of superior fire, so the N.F.S. were called out. They, too, gave up.

The boys spent the night in the mountains, shot two fowls for rations, then dug themselves in in a disused mine.

Frontal Attack

On Friday, 36 Marines led by two subalterns, tried a frontal attack, firing blank cartridges. Again the boys' fire was too hot, so word was sent back for reinforcements, and along came a captain to supervise the offensive.

But the boys, with ammunition failing, now flew the white flag.

They were taken back under escort. Then placed "under restriction" at their homes.

ICY WIND FOLLOWS SNOW IN STRAITS

SNOW, which had been falling for two days in the Straits of Dover, stopped last night when darkness fell. But, after dark, the icy north-easterly wind increased considerably and the weather was rough, with temperature down to freezing point.

Friday's and yesterday's snow squalls have extended to northern France and the French coastline is white.

The present spell is the most wintry since 1942.

Luftwaffe, apparently drawing on reserves from Germany, is reacting strongly.

The Navy continues shelling German concentrations at every opportunity and German U-boats which have been seen lurking off the shore have joined in the battle, according to the Associated Press.

Charge of Death

The latest German onslaughts follow a visit by Kesselring to the German front-line units in which he brought a message from Hitler saying that the Allied beachhead must be wiped out and imposing a new time limit for the job.

With an incredible disregard for human life, the Germans were flung into battle in the very mouths of our artillery.

As they tried a "Light Brigade" horseless charge across the low-lying plain they were simply mown down by a murderous weight of Allied shells.

The Allied line bent a little in the Caroceto area. A slight withdrawal was made under the tremendous Nazi pressure.

While the men on the beachhead hit back hard, the main forces of the Fifth Army, striking with power under a rolling barrage that has shaken the Rapido River valley, have made some gains in face of desperate German resistance at Cassino.

The battle for Cassino has become the battle for the break-through, but though reinforced by New Zealand and Indian units, General Clark's forces have not yet achieved this.

After a terrific barrage had smothered the Germans in hot steel and flying rubble, Indian and New Zealand troops joined in fierce attacks on Abbey Hill.

Trained as night fighters, the New Zealanders attacked with the bayonet and attained their objective.

Two strongly-held crests remained in Allied hands, but the position on the Abbey Hill crest is obscure.

60,000 Nazis

Both the Allies and the Germans claim to hold Cassino railway station one mile south of the town. In bitter fighting the station changed hands many times, but tthe latest reports say it is in Allied hands

Cassino is now threatened from the north-west, north, east and south, but though their escape gap is steadily narrowing, the Germans are still resisting furiously.

The Germans have flung from 40,000 to 60,000 men into the battle of the beachhead and the Nazis say, in spite of all their efforts, that more Allied troops have been landed in the Nettuno area.

Berlin's latest communiqué on the fighting speaks of "enormous artillery activity" and says the "ring of encirclement" round the Allies has advanced up to 2½ miles south of Carroceto.

The main Nazi thrust is from Carroceto, to seize the ports of Anzio and Nettuno.

... to join the King, Queen, and Princess Elizabeth at Wembley Stadium, where they saw England beat Scotland 6—2 in the football international.

This was the first big football match the Princess has attended, though she has been to Wembley before for youth displays.

When we saw the personalities in the Royal Box we got the impression that England had paused amid the feverish preparations for invasion to enjoy perhaps the last big football match before the final effort to smash the Nazis begins.

What a cheer the boys in khaki gave General Montgomery! King Haakon of Norway represented the oppressed countries we are going to rescue. Members of the Cabinet there were Mr. C. R. Attlee, Mr. A. V. Alexander, Mr. Ernest Bevin, Lord Leathers, and Lord Woolton.

Crowd of 80,000

Khaki and Air Force blue predominated in the crowd of 80,000, and, in keeping with the occasion, the receipts of £18,000, a record for any war-time sporting event, go to war charities.

During the break, members of the Army Physical Training Corps gave an insight of the vigorous training our men are undergoing before invasion. Half the squads, stripped to the waist, did severe log exercises, and the rest gave other samples of toughening training with rifles.

The Scots team surprised everyone by holding England to a 1—1 draw at half-time — Hagan (England) and Dodds were the scorers—but the second half found the Englishmen just too good and the Scots were run off their feet.

Only three minutes of the second half had elapsed when a Matthews-Smith duet led to Macaulay heading into his own goal. Everything now came off for England and in turn Lawton, Hagan, Mercer, and Carter raised the total to six before Dodds replied again for Scotland.

THOMAS MOULT'S STORY OF THE GAME—BACK PAGE.

SUBMARINES SINK 19 MORE

NINETEEN enemy ships have been sunk, six more probably sunk, and eight others damaged by British submarines on recent patrols.

Here are the details:—

North Atlantic.—Large enemy supply ship, escorted by trawlers, mine-sweepers and aircraft, hit by three torpedoes off the coast of Norway. It was seen to sink.

Two others were torpedoed by another submarine off the south-west coast of Norway.

Mediterranean.—Four large supply ships destroyed by torpedoes and a number of smaller vessels, operating under German control, sunk by gunfire.

Far East.—Two supply ships and several small naval craft attacked and sunk.

Operation on Sir Philip Gibbs

SIR PHILIP GIBBS, world-famous lecturer, war correspondent and novelist, and regular contributor to "The Sunday Chronicle," on whom a major eye operation was performed last week, is now recovering in a London nursing home.

Sir Philip Gibbs

For two years Sir Philip has been suffering from a form of cataract and has been unable to see to read.

It is hoped that, when his bandages are removed this week, his sight will be completely restored.

'No Unconditional Surrender'

—Finnish Paper

"NO people will give in to unconditional surrender even if it has only very few forces at its disposal," said the Finnish newspaper "Swomen Sosial Demokratti" yesterday.

"Unconditional surrender is nothing more than national suicide. The demand for unconditional capitulation has always had the opposite effect."

M. Ehrnrooth, Finnish Minister of the Interior, who was reported to be taking part in Finnish peace moves, left Stockholm for Helsinki by air yesterday.

ROME BOMBED

Rome radio says Rome was bombed on Friday night. Many buildings were hit and there were 200 victims, according to the radio.

Castel Gandolfo, site of the Pope's summer farm, also was bombed, says Rome.

A PRAYER FOR TO-DAY

THIS special prayer is suggested by the Bishop of Southwark, following the Archbishop of Canterbury's recommendation that prayers be said to-day for prisoners of war.

ALMIGHTY God, we commend to Thy Fatherly protection all prisoners of war and especially our own countrymen who are held captive by the enemy. Save them from tedium and anxiety. Give them courage, patience and cheerfulness, and sustain them with the sense of Thy care and with the hope of early deliverance. Make us eager to help in any way open to us. Fill the hearts of those in charge of them with mercy and kindness and hasten the hour of their release through Jesus Christ our Lord.

Until now there was no full report on the [results] of the raid, although great explosions were [he]ard, and it was known that some troops had [acc]omplished their tasks before they were taken [pri]soner or killed.

Now, a repatriated prisoner of war, Lieut. S. W. [Ch]ant, of the Gordon Highlanders, who was in com[m]and of a demolition party, has returned to tell his [st]ory.

This account of his adventures told to Combined Opera[tio]ns Headquarters throws light for the first time on some of [the fi]ghting in the docks and ...s that night at St. [Naza]ire.

...was on board the Campbel[town] in command of the demoli[tion p]arty detailed to blow up the [pump]ing station of the dry dock," Lieut. Chant.

... roar of guns had opened up ...e destroyer from the banks ... Loire, and by the time she ...ed her goal, jammed in the ...gates. I estimate that 75 per ... of those on deck were casual[ties].

[M]ost of the wounded managed ... ashore. I myself had two [shrap]nel wounds in the right arm [and] left leg, and these slowed my movements.

[W]e could hear the sounds of ... on the roof while we blew ...e steel door and descended [st]eel staircase.

[Fo]rty feet below ground we laid [the c]harges. My hands had been [cut w]ith small pieces of shell which [made] the handling of the charge [some]what awkward, but Sergeant ...rill stayed with me in case ...ounds would prevent me from ... the charges while I sent the ... the party upstairs to warn [the n]eighbourhood of the coming [explo]sion.

[Pu]mping Station Blown Up

[W]e raced outside and lay on [the g]round, completely exposed on [the c]oncrete paving. Fortunately ... shifted a further ten yards ... a second later; when the [explo]sion did come huge concrete ...s hurled through the air [danger]ously near.

[W]hile I was blowing up the [pum]ping station, Lieut. Smalley [and] his party reached the wind[ing] station nearby, laid their [char]ges and completely destroyed [not o]nly the winding gear but the [whol]e building.

[Th]e northern dock gate and the [pumpi]ng station controlling it were [compl]etely wrecked by several par[ties; t]he southern gate had already [been] effectively destroyed by the [Cam]pbeltown.

[N]ot so fortunate were the [partie]s detailed to attack the [bridg]es and gates of the new en[tranc]e. They were mostly either [blow]n up in their M.L.s before [reac]hing the Old Mole or were pre[vente]d from landing because their [boat]s were hit, set on fire and out [of co]ntrol. Those that did reach ... were subjected to heavy fire.

[C]orporal Saves Captain

[T]o give an example of the diffi[culti]es of these parties, Captain ..., on board an M.L. which was ... blown up, was thrown into [the wa]ter and started to swim to [the M]ole, but was fired at with [the o]thers and had to duck re[peate]dly.

[H]e was very tired and would [hav]e drowned had he not been [sav]ed by one of his N.C.Os, [Cor]poral Arthur Young, who, [swi]mming to him, grabbed him [by] the hair and dragged him [alon]g until he reached the Mole.

[W]hen they did get on to the ... there were but a few of the [origi]nal party and they had lost ... of their arms in the explo[sion].

[A]ll this time my own party had no interference from the [ene]my, thanks to excellent pro[tecti]on afforded by our covering ...

One of Goebbels' political commentators went so far as to claim that the Luftwaffe's "heavy" raids on London helped to defeat Lord Hartington in the West Derbyshire by-election. He said:

"Not the least of the reasons for the Government defeat was the German raids, which, despite severe British censorship, have caused considerable disquiet."

Story of Raid—Page 3.

"LUFTWAFFE STAKES ALL ON 1944"

—Berlin.

Berlin High Command's official newspaper, "Militaerische Korrespondenz," claimed yesterday that the German air force has a strong "invasion reserve" and may soon have new-type planes.

"The Luftwaffe High Command has staked everything on being strong in 1944," it added.

... carried out ... yesterday ... of Friday, were ... the whole ... in hard and fluctuating fighting, and at various points deep breaches were halted."

Persisting in the claim that General Manstein's forces were able to break through into the Kanyev pocket, to relieve the ten trapped divisions, the communiqué added:

"West of Cherkassy further parts of the freed fighting force rejoined our lines, and numerous enemy counter-attacks were repelled in spite of difficult terrain."

The whole of the Russian front is now covered with snow.

London 6.52 p.m.-7.39

British prisoners are treated better than ever before by Nazis

By Dr. JEROME DAVIS

Director for Canada of the War Prisoners' Aid of the World's Committee of the Y.M.C.A.

CONTRARY TO THE GENERAL IMPRESSION, THE ALLIED PRISONERS OF WAR IN GERMANY ARE ON THE WHOLE WELL AND REASONABLY TREATED. FOUR MAIN FACTORS ARE RESPONSIBLE:

1. In the treatment of Allied prisoners, the Germans have played the game very closely to the rules agreed upon at the Geneva Convention of 1929. The incident of tying the hands of some prisoners in alleged retaliation for the tying of German prisoners at Dieppe was an exception.

2. Representatives of a Protecting Power regularly visit all German prison camps. Prisoners have the right to speak freely and confidentially to such representatives who report everything to their Government.

Camps are also visited by agents of the Red Cross and the Y.M.C.A.

3. The Red Cross and the Y.M.C.A. have done a great job in looking after the needs, comfort and morale of the prisoners.

4. The number of Axis prisoners in Allied hands grows steadily, and, just as we are worried over the fate of our captured loved ones, the Germans are concerned about their men who are taken prisoner.

It is true that food and clothing are not too good, but it is not good anywhere in Axis territory. But food packages do go through, and are delivered and enjoyed by those to whom they are addressed.

Our prisoners enjoy many things unheard of by the prisoners of World War No. 1.

Among them are games and competitive sports, camp newspapers, religious services, occupational training, flower and vegetable gardens, and—of all things—high school and "Educational Universities."

General Montgomery has acknowledged "the correct and soldierly attitude" of German front-line troops toward Allied wounded and prisoners. What happens afterwards?

Put to Work

Those captured are sent to Germany as quickly as possible. They are separated into Stalags for soldiers, Oflags for officers and Stalag Luft for members of the Air Force, who seem to get preferred treatment.

All healthy prisoners except officers are put to work. From the base camps, many are sent 100 to 150 miles in working detachments.

These work, and live, in factories, sawmills, breweries, cold-storage plants, glassworks, refineries, or they may be put to work on roads, farms, or in the forests.

While the pay is but little, they are paid.

In the average prison camp the men get bread and a coffee-like drink for breakfast.

"Coffee-like" is correct, for the

Contd. in next Col.

P.O.W. CAMP LIFE

Contd. from previous Col.

brew is made from barley, acorns or peas, or a combination of all three!

There is a bit more of this brew, and a soup or a stew at noon and at night.

The Red Cross supplements this diet by sending in from America, Canada and Britain big packages of food containing that rarity, real butter, jam, sardines or fish, luncheon meat, crackers, cheese, vegetables, dried fruit, tea and chocolate.

Because of this the prisoners actually are living better than the German civilian population!

Recreational and educational facilities—the two wonders of the prison camps—play an important part in making life bearable.

We have sent in musical instruments for the organisation of bands and orchestras, and the concerts given by British, Canadian and American prisoners are bright spots in camp life.

Typewriters, stencils and thousands of sheets of paper have been sent for the publication of camp newspapers.

Prisoners have organised theatrical companies, and on home-made stages produce such favourites as "Cinderella," "Hobson's Choice," Edgar Wallace's thriller "On the Spot," and a revue called "Goon Crazy." Prisoners also hold weekly dances, with pals for partners.

MOYNE IN CAIRO

Lord Moyne, recently-appointed Minister Resident in the Middle East, returned to Cairo yesterday, says Reuter.

News in Politics

M.P.s MAY SIT 5 DAYS A WEEK SOON

By Frederick Truelove

THE war situation will be the subject of Parliamentary debate for three days during the next sittings—first for two days in the Commons and then one day in the Lords. The Prime Minister will provide the text with the first full review he has given since last September.

The situation in Italy is the one upon which M.P.s are the most anxious for information.

Since the landings on the Anzio beachhead the alternations of optimism and pessimism in high quarters have had disturbing effects, and the recent entirely unfounded suggestions that these results were due to the war correspondents on the spot did not improve matters.

Mr. Churchill will have the opportunity to put these things in the right perspective, and M.P.s hope that he will discourage opinionative pronouncements even in the highest circles while battles are in progress.

Such a self-denying ordinance for official spokesmen may prove to be absolutely necessary during the greater operations that are in prospect in the west.

✦

THE Parliamentary programme threatens to become seriously congested with business. The Education Bill makes slow progress in committee, the Government's far-reaching proposals for a National Health service has yet to be considered in advance of legislation, and other big reconstruction plans have still to be announced.

In addition there is all the routine work of the session. M.P.s expect it will soon be necessary to sit five days a week.

✦

THERE are again whispers behind the scenes of more Government changes in the near future. Some Ministers are certainly feeling the effects of a long period of office under the strain of war.

SPEAKING OF FAMILIES..

This was the Joneses in 1936—

This is the Jones's own favourite picture from the family album. Beryl (ringed) is now on war work.

—AND THIS IS BERYL TO-DAY

Jones Family are Doing a Grand Job During War

IF THEY EVER GIVE MEDALS TO MOTHERS, THE PLACE OF MRS. DINAH ELIZABETH JONES, OF 9, NANT-Y-GLYN, BAGILLT, FLINTSHIRE, WILL BE NEAR THE HEAD OF THE LINE.

But the chances are that she will be too busy to collect hers. With her 15 children and 12 grandchildren she has never had much time on her hands.

The Jones family has been brought back into the news following spirited discussion among readers about pictures of large-size families published in "The Sunday Chronicle" recently.

This has drawn our attention to the fact that we published a picture and story of the Jones family on Sept. 27, 1936.

Mrs. Jones then had no much time on her hands. Four years ago her burden became heavier with the death of her husband, Aneurin. Now, in wartime, she has less spare time than ever.

She runs a grocery shop in High-street, Bagillt. Every Monday and Thursday, at seven in the morning, she travels 25 miles to Liverpool market to buy supplies for the shop—leaving her daughter Iris to get the two youngest children, Alun, aged 10, and Gladwyn, aged 9, off to school and look after the shop.

When Mrs. Jones returns at 4.30 there is always a queue waiting to share in the goods she has brought from the big city.

Having disposed of them, she has a mother's day's work to do, a[illegible]

THEY MARRIED 72 YEARS AGO

BRIDGNORTH, Shropshire, beats the claim of Hadleigh, Essex, to possess Britain's oldest married couple.

They are Mr. and Mrs. John Lester who, at the end of January, completed 72 years of married life.

Mr. Lester is 92 and his wife will be 94 next month. Both are natives of the district.

Those captured are sent to Gerany as quickly as possible. They re separated into Stalags for ldiers, Oflags for officers and talag Luft for members of the Air orce, who seem to get preferred eatment.

All healthy prisoners except ficers are put to work. From the se camps, many are sent 100 to 0 miles in working detachments.

These work, and live, in factories, wmills, breweries, cold-storage ants, glassworks, refineries, or ey may be put to work on roads, rms, or in the forests.

While the pay is but little, they e paid.

In the average prison camp the en get bread and a coffee-like ink for breakfast.

"Coffee-like" is correct, for the

Contd. in next Col.

P.O.W. CAMP LIFE

Contd. from previous Col.

brew is made from barley, acorns or peas, or a combination of all three!

There is a bit more of this brew, and a soup or a stew at noon and at night.

The Red Cross supplements this diet by sending in from America, Canada and Britain big packages of food containing that rarity, real butter, jam, sardines or fish, luncheon meat, crackers, cheese, vegetables, dried fruit, tea and chocolate.

Because of this the prisoners actually are living better than the German civilian population!

Recreational and educational facilities—the two wonders of the prison camps—play an important part in making life bearable.

We have sent in musical instruments for the organisation of bands and orchestras, and the concerts given by British, Canadian and American prisoners are bright spots in camp life.

Typewriters, stencils and thousands of sheets of paper have been sent for the publication of camp newspapers.

Prisoners have organised theatrical companies, and on home-made stages produce such favourites as "Cinderella," "Hobson's Choice," Edgar Wallace's thriller "On the Spot," and a revue called "Goon Crazy." Prisoners also hold weekly dances, with pals for partners.

MOYNE IN CAIRO

Lord Moyne, recently-appointed Minister Resident in the Middle East, returned to Cairo yesterday, says Reuter.

SPEAKING OF FAMILIES..

This was the Joneses in 1936—

This is the Jones's own favourite picture from the family album. Beryl (ringed) is now on war work.

—AND THIS IS BERYL TO-DAY

Jones Family are Doing a Grand Job During War

IF THEY EVER GIVE MEDALS TO MOTHERS, THE PLACE OF MRS. DINAH ELIZABETH JONES, OF 9, NANT-Y-GLYN, BAGILLT, FLINTSHIRE, WILL BE NEAR THE HEAD OF THE LINE.

But the chances are that she will be too busy to collect hers. With her 15 children and 12 grandchildren she has never had much time on her hands.

The Jones family has been brought back into the news following spirited discussion among readers about pictures of large-size families published in "The Sunday Chronicle" recently.

This has drawn our attention to the fact that we published a picture and story of the Jones family on Sept. 27, 1936.

Mrs. Jones then had not much time on her hands. Four years ago her burden became heavier with the death of her husband, Aneurin. Now, in wartime, she has less spare time than ever.

She runs a grocery shop in High-street, Bagillt. Every Monday and Thursday, at seven in the morning, she travels 25 miles to Liverpool market to buy supplies for the shop—leaving her daughter Iris to get the two youngest children, Alun, aged 10, and Gladwyn, aged 9, off to school and look after the shop.

When Mrs. Jones returns at 4.30 there is always a queue waiting to share in the goods she has brought from the big city.

Having disposed of them, she has a mother's day's work to do, and

THEY MARRIED 72 YEARS AGO

BRIDGNORTH, Shropshire, beats the claim of Hadleigh, Essex, to possess Britain's oldest married couple.

They are Mr. and Mrs. John Lester who, at the end of January, completed 72 years of married life.

Mr. Lester is 92 and his wife will be 94 next month. Both are natives of the district.

RAIL SPEED-UP

PEACE PLAN FOR U.S. SHIPS

PLANS to dispose of America's surplus merchant ships are recommended by Bernard Baruch, foremost economic adviser of the U.S. Administration, in a report on the transform of the U.S. from war to peace.

He recommends the appointment of a surplus property administrator in the office of war mobilisation, and the disposal of ships and maritime properties by the maritime commission acting under his control.

The report has been issued because: "An early or sudden collapse of the Nazis in Europe, finding us unprepared for handling transition problems, could result

SUICIDE NOTE ON EVE OF TREASON CHARGE

Bedaux "Was Friend of High-Up Nazis"

CHARLES BEDAUX, SAID TO BE THE SELF - CONFESSED FRIEND OF HIGH-RANKING NAZIS AND VICHY LEADERS, HAS DIED AT MIAMI, FLORIDA.

He is stated to have taken an overdose of sleeping pills which he had hoarded, and left a suicide note on the eve of a Grand Jury considering whether to indict him for treason and for communicating with high German and Vichy officials.

Bedaux, one-time labourer who became the millionaire inventor of the Bedaux industrial system, had been in hospital in a coma since Tuesday.

Bedaux had been in custody of immigration officials since his arrival in Miami by air on Dec. 23 from North Africa under military escort on suspicion of treason and communicating with the enemy.

Cost G-Men's Lives

Mr. Frances Biddle, U.S. Attorney-General, disclosed that two Federal agents—G-Men—lost their lives indirectly in connection with the arrest of Bedaux in North Africa. They were killed with other passengers when their transport plane crashed in the Brazilian jungle in June, 1943.

In 1937 Bedaux rented a summer home near Berchtesgaden and made the acquaintance of Captain Fritz Wiedemann, Otto Abetz, Dr. Schacht and other Nazis, said Mr. Biddle.

When France fell in 1940 Bedaux made his château available to the American Embassy but travelled back and forth between occupied and unoccupied France carrying on negotiations with both the Germans and the Vichy French.

A Bottle Filler

Born in France, and a naturalised American since 1917, Bedaux was 58.

Experience gained in doing odd jobs gave Bedaux the ideas for increasing production which brought him a fortune.

He had been, among other things, a bottle-filler in a New York public-house, a member of the French Foreign Legion, and an itinerant labourer.

He had been host to the Duke and Duchess of Windsor at the sixteenth-century Château de Cande in France, where the religious ceremony of the Duke's marriage took place.

When he became a millionaire Bedaux lived in great luxury and wore £50 suits. Besides his £125,000 château in France, he had a New York flat and a grouse moor in Scotland.

On a holiday once he took 30 people, a hundred horses, five caterpillar cars, a hydroplane, three boats, and a radio station.

The holiday consisted of a 9,500-mile motor tour through Europe and Africa, including a crossing of the Sahara Desert.

CO-OP PUB PAYS 'DIVI' ON BEER

"The Sunday Chronicle" Reporter.

WHEN I bought a glass of beer at the Wheatsheaf public house in Harwich yesterday the barman gave me a printed receipt with my change.

If I collect enough of these receipts I will be able to get a cash rebate on them when the next half-year's dividend of the Harwich, Dovercourt and Parkeston Co-operative Society is declared.

The Wheatsheaf is the only fully licensed public house in England operated by a co-operative society.

"Encroachment" Protest

Not all the customers took the receipts, but I was assured that even non-members are entitled to cash these at half the dividend rate.

But Harwich's other publicans regard the Wheatsheaf scheme as an encroachment on their business and a strong protest was made against the renewal of the licence at the recent Brewster Sessions. The licensing justices granted the renewal of the licence.

One of Harwich's licensees told me he thought this was "the thin end of the wedge."

Payment of dividends acted adversely against legitimate publicans, who were unable to offer similar inducements to their customers.

Local licensees had brought the matter to the notice of the National Consultative Council.

"AMERICAN FIRSTERS"

In his American commentary in to-morrow's "Daily Sketch" Alistair Cooke, the famous writer and broadcaster, draws attention to an organisation calling itself "Peace Now," round which old-time "American Firsters," members of former Fascist organisations, are beginning to rally.

According to Mr. Cooke, "Peace Now," if not actually dangerous now, may become a focal point of disaffection "if the invasion is long or slow, of if the European war ends in a Continental upheaval."

say, "Hey-ho, nothing to do till to-morrow."

One or another of her sons or daughters may drop in for the evening with their children. It may be Mrs. Gladys Jones, of Veolgron, for example; she is the mother of six, but she works in a munitions plant all the same.

Or perhaps it is the eldest son, John, who lives at New Brighton, Bagillt. He and his wife are both on munitions work. All the Joneses are busy people.

Work in Mill

Son Joseph Jones, of Ithel Cottages, Bagillt, is unlikely to drop in, for he is in the R.A.F. But his two children often visit their grandmother.

Son Thomas Morgan Jones, also married, lives at Shotton, and is in the Royal Engineers.

Then there are Mrs. Marie Priscilla Morgan, of New Brighton, Bagillt, wife of John Morgan and mother of two children; and Raymond Jones, Prince of Wales-avenue, Flint, father of two and serving in the R.A.F.

Herbert J. Jones, Salisbury-street, Flint, is in the R.A.F. and his wife is in a munitions plant. Llewelyn Jones, of 9, Pen-y-Glyn, Bagillt, also is a munitions worker.

So are Ronald Jones, and his 17-years-old brother Kenneth, in the Midlands.

Beryl, aged 16, and Glyn, aged 15, work in a textile mill at Flint.

Not until the biggest job of all is done will Mrs. Dinah Jones, the queen bee of an industrious hive, be able to gather all her brood about her. And then, perhaps, she will find time to rest and rejoice

Twenty-eight thousand wagons are being cleared each week-end by the G.W.R. as the result of a special drive under the personal daily supervision of the Chief Goods Manager to free vehicles for vital war traffic. This number exceeds anything previously accomplished, but a special appeal is being made to traders to assist in creating new records.

Army Transport has Big Task

From Lord Strathspey.

To the Editor—

SIR,—The opening of the "not far distant" Second Front is the occasion for a timely appeal from Mr. Arthur Deakin, Acting-General Secretary of the Transport Workers' Union.

Every 24 hours each armoured division which opens up the Second Front will use 70,000 gallons of petrol, will fire 350 tons of ammunition, will eat 120 tons of food.

Let us remember, then, those whom the people at home are too apt to forget—the officers and men of the Royal Army Service Corps, those motorists and lorry drivers of other days whose task it will be to deliver on time all that petrol, ammunition and food from the depots to the fighting units advancing towards the Rhine.

STRATHSPEY.
Rottingdean, Sussex.

"BRITISH" FOOTBALL

Sir,—I wonder what footballers themselves think of Major Buckley's idea, as expressed in your issue last Sunday, of linking up British football with Continental clubs.

Personally, I do not think such a "revolution" is necessary. I do not think it is workable.

L. S. PROWSE.
Bristol.

HOME GUARDS' MEDAL

Sir,—Surely Home Guards who have served for three years or more deserve a long-service medal.

Salford. A. DAWSON.

BOMBING OF ROME

Sir,—What will happen when our troops get to Rome? Will they allow religious buildings to be used as a base of operations by the Germans?

I hope the tragic farce of the Cassino Monastery episode will not be repeated.

D. M. SOMMERVILLE, O.B.E.
London, W.1.

"KILLED OVER BERLIN"

Sir,—I have lost a bomber pilot son, killed over Berlin, and at one time had sons in all the three Fighting Services, yet fail to see anything glorious in the bombing of German civilians.

WILLIAM ARNOLD.
Northampton.

GUERILLAS OF GREECE

Sir,—In my story last week about the guerillas of Greece—where I was in 1940—the town of Skoplje was mentioned as being in Bulgaria. It is, of course, in Jugoslavia.

London, W.1.

WORKERS' HOMES

Sir,—A great deal is being said about housing. What about the erection of workers' homes to be acquired on the owner-occupier principle of £50 down, 25 years' purchase plan?

T. J. ROBERTS.
Llandudno.

FROM ITALY

Sir,—"The Sunday Chronicle" for Nov. 7 has just reached this Mess, Somewhere in Italy, and we are astounded by the "Boy Meets Girl in Alexandria" picture on Page 3 (reproduced below).

The undersigned have all completed three years' military service in Egypt during the present war, and have spent leave in Alexandria, but never have we known Allied Servicemen, or women, to be fêted by the local inhabitants.

On the contrary, the local inhabitants know that men on leave after many months in the desert (often two years) have a considerable amount of "credits" to spend, and the majority make it their business to "fleece" the Servicemen for every piastre they can get.

In all fairness it should be mentioned that there are a few people whose desire is to entertain men on leave, and excellent work has been done in providing Service Clubs, but, unfortunately, the percentage of people who actually pull their weight in this respect is pitifully small.

Signed by 3 CAPTAINS, 1 LIEUTENANT, 8 SERGEANTS.

GUNS BEAT NAZI BID TO BURN LONDON

Bridegroom-To-Be And Wedding Guests Die At Re-union

THE LUFTWAFFE'S GREATEST BID SINCE 1940-41 TO FIRE LONDON EARLY YESTERDAY FAILED, ALTHOUGH AT ONE TIME FLAMES RINGED THE CAPITAL.

About 200 bombers came to hit London, according to the Germans, who say they lost five.

It was the fiercest "scalded cat" raid yet carried out, and from all points of the compass the pilots tried to smash through a shell-packed sky.

For the first time London heard the capital's defence guns go all-out. Shrapnel fell like hailstones in a storm.

Mosquitos on intruder patrol over Northern France and Belgium destroyed three enemy planes. Two others are believed to have been shot down in flames here.

Old People Killed

The raid brought tragedy to Elizabeth Mary Smith, of Camberwell. Yesterday, she should have married Company-Sergt.-Major Henry Joseph Elcomb. There was a bridal cake and the wedding dress ready to put on.

But on the other side of London a bomb killed her husband-to-be, her brother and other family wedding guests as they were celebrating the re-union.

Homes for aged people in one area received a direct hit. Nine of the inmates are known dead.

A boy and girl were born in the maternity wing of a hospital while the roof blazed furiously. They are both alive and doing well.

Just before the raid doctors were superintending the birth of another baby. The mother was removed to a nearby building and the birth was successfully completed.

Altar Boy Hero

The mothers and babies were safely evacuated in motor-coaches to other hospitals. The nurses' home was burned out and the hospital damaged

Harry Baker, a 12-years-old altar boy, was the hero of the night.

When a Roman Catholic church was hit he ran from his home and directed the firemen in their efforts to save sacred articles, most of which were removed The church was destroyed.

Churches were hit and a school gutted.

A building housing 500 Gibraltar evacuees was badly damaged and the roof set ablaze.

One of London's most popular shopping centres was hit when a H.E. bomb fell in a mews at the back of the shops.

The mews contains several garages, and these caught fire and blazed furiously. Windows of a score of shops on both sides of the street were shattered.

Walking along the street was

Continued in next column

like walking through an alarm-clock shop with all the alarms ringing. The smashing of the windows had set half a dozen burglar alarms ringing furiously.

The mews had been hit three times in previous raids.

Two H.E. bombs destroyed flats above a block of shops. A large fire was also caused and gas mains set alight. Ten persons were at first trapped.

A Mr. Elcombe was recovered. The nine remaining in the ruined flats were: Mrs. Elcombe and her son, Mr. and Mrs. Michael and their baby, Mrs. Smith and her nine-months-old baby, and Mr. and Mrs. Stallard.

It's Worse—in Berlin

Yesterday's Air Ministry and Ministry of Home Security communique said: "Early this morning there was enemy activity over the London area, East Anglia and South-East England.

"In the London area damage and casualties were caused, but bombs dropped elsewhere did little damage.

"Two enemy aircraft were shot down over their bases in Belgium and Northern France by R.C.A.F. Mosquitos on intruder patrol."

FOOTNOTE.—One shop, whose windows were shattered now bears the slogan "It's worse in Berlin."

Seventeen-year-old Miss Elisabeth Rushbrooke Williams, 1944 debutante and busy war-worker, washes hospital dishes.

Two days a week she helps in the Silchester village Welfare Centre.

In her spare time Elizabeth sells war savings to the villagers.

1944 War-Worker Deb

LAST night, just for one glamorous evening, modern Cinderella, 17-years-old Elizabeth Rushbrooke-Williams, escaped from war-work to a peace-time world of bright lights, beautiful frocks and sweet music . . . her coming-out ball. It was at Grosvenor House in aid of Queen Charlotte's Hospital, and most of this season's debutantes were there.

To-morrow Cinderella will be back on her war job, getting up at 6.30 a.m. to scrub floors, wash dishes and make beds at a hospital in Basingstoke, where she works two days a week. On two more days, she gives out orange juice and cod liver oil to village mothers at her local Welfare Centre.

Her home is Rye House, Silchester, in whose beautiful grounds stand the massive remains of the Roman wall, which once surrounded the fortified town.

For many hundreds of war-working debutantes, like Miss Rushbrooke - Williams, last night's ball was an event to be remembered—a welcome change from daytime war jobs to night-time gaiety.

SHERBROOKE, V.C., IS BACK

"SHERBROOKE of the Onslow," who was badly wounded nearly 14 months ago, is back on active service—in his first shore job for 27 years. He now commands one of the largest naval air stations in the country.

In a memorable Arctic battle, Capt. B. St. V. Sherbrooke, D.S.O., led his destroyer flotilla against a superior German naval force, and put to flight a pocket battleship and her consorts before they had a chance to attack an important convoy bound for Russia.

Led The Way

Flying the signal: "Am attacking the enemy; destroyers join me," he led the way in to attack. In Arctic squalls and sub-zero temperature, the British force beat off the enemy.

Capt. Sherbrooke lost an eye in the action, won the V.C., and the nickname also of "Nelson V.C."

He told "The Sunday Chronicle" yesterday: "I am glad to be with the Fleet Air Arm. Obviously it will be our greatest weapon in the war in the Pacific."

'Work Inspection Will Aid Trade'

—Sir S. Cripps

SIR STAFFORD CRIPPS, Minister of Aircraft Production, said in London last night that, though Government inspection would probably be diminished after the war, he hoped that in industry an attempt would be made to maintain the highest quality by a system of inspection throughout

party under Lieut. Hopkins. His party and mine were then ordered by Captain Montgomery (who had arrived to check over the damage we had done) to return to the Old Mole and re-embark. This meant crossing an iron bridge covered by a gun in a building nearby. I thought that this would shoot us up when we showed ourselves on the bridge.

"We Must Walk Hard"

"I ordered the men to swing hand by hand monkey fashion, along the girders under the bridge. Thus we all got across safely unobserved.

I wish I did. I sent him to search for a boat in the Bassin de St. Nazaire with a view to hiding to evade capture; but he had no success.

"We then saw three German S.S. Polizei soldiers advancing on us. They covered us with their machine-pistols, shouting, 'Heraus! Heraus!' and adopted a most menacing attitude.

"The soldier with me then stood with his hands up. He was shot dead from a range of one yard by all three men. They then turned to me, and made the same request. Luckily, I could not move.

"They then carried me along the

"Hich Plan" Sa[illegible] Ships From T[illegible] Yards Ra[illegible]

TO-DAY "The Sunday Chronicle" [illegible] close the first details of a bri[illegible] daring method of attacking enemy [illegible] coast-hugging convoys that was inv[illegible] perfected by the late Lieut.-Comd[illegible] Hichens, D.S.O. and bar, D.S.C. and [illegible]

It was described to me yesterday [illegible] Hich—requiring split - second timing, [illegible] nerve, and colossal skill," writes a [illegible] Chronicle" reporter.

He employed it with outstanding results before his death in action at sea in April last year.

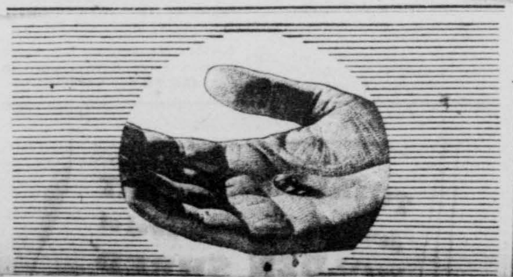
The "Hich Plan" was mark down a victim in the convoy, usually a slow-moving tanker or freighter, and dash across its path at top speed beyond its bows.

At the moment of crossing, a depth charge was dropped from the attacking M.T.B. or M.G.B. It was set to explode a split-second after it had sunk. This gave the attacker just enough time to make its getaway.

Certain Destruction

Meanwhile, the tanker, unable to alter course in time, steamed forward to certain destruction.

Enemy vessels were in fact known to be blown completely out of the water by the terrific force of the depth charge exploding beneath their hull.



"The whole manœuvre took only a few seconds," I was told.

A peacetime West Country solicitor, "Hich" died at the age of 34.

SHERBROOKE, V.C., IS BACK

"SHERBROOKE of the Onslow," who was badly wounded nearly 14 months ago, is back on active service—in his first shore job for 27 years. He now commands one of the largest naval air stations in the country.

In a memorable Arctic battle, Capt. B. St. V. Sherbrooke, D.S.O., led his destroyer flotilla against a superior German naval force, and put to flight a pocket battleship and her consorts before they had a chance to attack an important convoy bound for Russia.

Led The Way

Flying the signal: "Am attacking the enemy; destroyers join me," he led the way in to attack. In Arctic squalls and sub-zero temperature, the British force beat off the enemy.

Capt. Sherbrooke lost an eye in the action, won the V.C., and the nickname also of "Nelson V.C."

He told "The Sunday Chronicle" yesterday: "I am glad to be with the Fleet Air Arm. Obviously it will be our greatest weapon in the war in the Pacific."

'Work Inspection Will Aid Trade'
—Sir S. Cripps

SIR STAFFORD CRIPPS, Minister of Aircraft Production, said in London last night that, though Government inspection would probably be diminished after the war, he hoped that in industry an attempt would be made to maintain the highest quality by a system of inspection throughout

St. Nazaire Raider Was Shot In Cold Blood

COMMANDOS DID NOT COME BACK

Continued from page 1

party under Lieut. Hopkins. His party and mine were then ordered by Captain Montgomery (who had arrived to check over the damage we had done) to return to the Old Mole and re-embark. This meant crossing an iron bridge covered by a gun in a building nearby. I thought that this would shoot us up when we showed ourselves on the bridge.

"We Must Walk Hard"

"I ordered the men to swing hand by hand monkey fashion, along the girders under the bridge. Thus we all got across safely unobserved.

I wish I did. I sent him to search for a boat in the Bassin de St. Nazaire with a view to hiding to evade capture; but he had no success.

"We then saw three German S.S. Polizei soldiers advancing on us. They covered us with their machine-pistols, shouting, 'Heraus! Heraus!' and adopted a most menacing attitude.

"The soldier with me then stood with his hands up. He was shot dead from a range of one yard by all three men. They then turned to me, and made the same request. Luckily, I could not move.

"They then carried me along the

"Hich Plan" Sank Ships From Ten Yards Range

TO-DAY "The Sunday Chronicle" can disclose the first details of a brilliant and daring method of attacking enemy ships in coast-hugging convoys that was invented and perfected by the late Lieut.-Comdr. Robert Hichens, D.S.O. and bar, D.S.C. and two bars.

It was described to me yesterday as "pure Hich—requiring split - second timing, incredible nerve, and colossal skill," writes a "Sunday Chronicle" reporter.

He employed it with outstanding results before his death in action at sea in April last year.

The "Hich Plan" was mark down a victim in the convoy, usually a slow-moving tanker or freighter, and dash across its path at top speed beyond its bows.

At the moment of crossing, a depth charge was dropped from the attacking M.T.B. or M.G.B. It was set to explode a split-second after it had sunk. This gave the attacker just enough time to make its getaway.

Certain Destruction

Meanwhile, the tanker, unable to alter course in time, steamed forward to certain destruction.

Enemy vessels were in fact known to be blown completely out of the water by the terrific force of the depth charge exploding beneath their hull.

"The whole manœuvre took only a few seconds," I was told.

A peacetime West Country solicitor, "Hich" died at the age of 34.

Tanker Attacked

3 NAZI CHIEFS DIE

Deaths of three German generals on the Russian front was announced yesterday. They are SS. Major-General Wilhelm Gartenstein, Major-General Wilfred Mattei and Major-General Albrecht von Groddeck, holder of the Knight's Cross of the Iron Cross.—Reuter.

Yesterday's Speeches

'FARM PRICE DISPUTE DEAD'
—says Mr. Hudson.

"THE past is dead and I, for one, do not intend to disinter it," said Mr. R. S. Hudson, Minister of Agriculture, in a reference at Taunton yesterday to the recent farm prices conference.

"I hope that farmers will now turn over the page and concentrate their entire energies on the immediate task of producing food to win the war and to win the peace.

"I think that some of you, in the heat of argument, may have tended to forget that fundamental consideration—the fitting of a healthy and prosperous agriculture into a permanent place in the national economy."

£100 Capitalists

Colonel Harold Mitchell, M.P., vice-chairman of the Conservative Party, said at Leeds:

"The man or woman who spends less than he or she earns is a national benefactor. Not only will the accumulated savings of small 'capitalists'—people with £100 or £200 in the bank—help in the development of industry, but these savings will make for a wider diffusion of profit."

SIR STAFFORD CRIPPS, Minister of Aircraft Production, said in London last night that, though Government inspection would probably be diminished after the war, he hoped that in industry an attempt would be made to maintain the highest quality by a system of inspection throughout all stages of manufacture.

We could not expect in Britain to excel on the basis of pure mass-production, but we had throughout our industrial history had a reputation for ingenuity and high quality. We must emphasise those capabilities.

Child Welfare Has a 'Danger'

"SO many public services exist to look after a child's physical and mental welfare that there is a danger that some parents may forget their personal repsonsibity to the child," says the new Roman Catholic Archbishop of Westminster (Dr. Bernard Griffin), in his Lent pastoral letter.

Stressing that children should respect their parents he says: "It is not clever to despise one's parents. But unfortunately modern fashion, and sometimes the schools are not blameless in this respect, make light of this obligation."

NAZIS FOUND FROZEN

A great number of Germans were found frozen to death on the battlefield, said yesterday's Jugoslav communique.

Giving details of a victory in Western Bosnia, the communique says the Germans in the Gahovo sector have been forced to withdraw to Knin (Dalmatia).

REGIMENT LOSES GOAT

"Billie," regimental goat and Royal mascot of the 1st Battalion Royal Welch Fusiliers, has died at Wrexham Barracks, at the age of 14. He had taken part in many parades.

"We Must Walk Hard"

"I ordered the men to swing hand by hand monkey fashion, along the girders under the bridge. Thus we all got across safely unobserved.

"We gained some railway lines among the warehouses and joined up with more returning parties of Commandos.

"Then came the blow. We were informed that we would have to walk home to England. Colonel Newman told us 'This is where we walk home. All the boats have been blown up or have gone back.'

"We then numbered about 70 officers and men all told, of whom at least 60 per cent. were wounded. Colonel Newman called all officers to him, and while the troops formed a protection screen round us we discussed the position.

"Colonel Newman decided that the best route was to fight our way back through the warehouses to the East until we reached the bridge.

Left the Party

"An assault party was formed and led by Captain Rey. They proceeded to fight a way, first north and then east, until we reached the south bank of the Bassin de St. Nazaire opposite the U-boat pens. We could see the U-boat pens, but no sign of activity from them at all.

"Here I had to leave the party. Some German soldiers a few yards ahead of us fired at me, and I received a ricocheting bullet in my right knee so that I could no longer walk. My troops, Private Brown of the Argyle and Sutherland Highlanders among them, carried me a short distance, but the task was too much for them, and I ordered them to leave me in the lee of the warehouses.

"I was then joined by one of the assault party; soldiers who lay down beside me and asked me what he should do. I recognised him, but did not know his name;

"The soldier with me then stood with his hands up. He was shot dead from a range of one yard by all three men. They then turned to me, and made the same request. Luckily, I could not move.

"They then carried me along the edge of the Bassin de St. Nazaire to a headquarters they had established in a French café, where I was left under guard with several wounded Commando soldiers.

Abused Us

"They began to abuse us, calling us 'Schweine, Schweinhunde Englander.'

"At about 7 o'clock in the morning I was taken from the café to an improvised dressing station.

"One German officer asked me through an interpreter, 'How the hell did you ever manage to get up here in St. Nazaire?' I replied: 'We just got here,' and the German said: 'Well, it beats us how you managed it.' The surprise of the Germans was most marked."

HATE!

IS it a fault or a weakness that Britain does not hate enough?

A young Dutch officer, broadcasting last Sunday's Postscript, told how Hitler had made the kindly Dutch people into a Nation of Haters.

But Britain, in the eyes of Occupied Europe, still persists in thinking some Germans are "nice people." We just can't hate them as we should.

ploding beneath their hull.

"The whole manœuvre took only a few seconds," I was told.

A peacetime West Country solicitor, "Hich" died at the age of 34.

Tanker Attacked

Lieut.-Commander Hichens describes one successful operation in which the "Hich Plan" was used in his book "We Fought Them in Gunboats," published to-morrow.

He wrote:—

But here was our chance, the near escort subdued, the way into the tanker open and exposed.

I think we cleared the enemy's bow by less than ten feet, after one of the most magnificent pieces of steering by Curtis that I have ever witnessed.

We had got there. Head had pulled the depth-charge release at the exact moment, and a few seconds later the boat shook to the underwater explosion. It had been a model attack. Just one of those rare occasions when everything goes right. And rare, indeed, they are!

A Pilgrimage To Washington (Eng)

VILLAGERS and schoolchildren of Washington, Co. Durham, will join with U.S. soldiers in a pilgrimage on Tuesday to Washington Manor, ancestral home of George Washington, first President of the United States.

The ceremony, which commemorates George Washington's 212th birthday, will include a pageant play by Washington schoolchildren (portraying John Bull, Uncle Sam, Britannia and the Statue of Liberty).

Horse is Mascot of Air Aces

"EVERY mascot ought to fly at least once," say the pilots of a Canadian night intruder squadron, but they fly Mosquitos, and—Hans, their mascot, is a horse.

Hans is pastured in a field next to their mess, and before a sortie air crews like to talk to him. Returning intruders dip their wings in salute when they fly over his field.

AFRICA STAR GOES TO WAR CORRESPONDENTS

Accredited war correspondents can qualify for the Africa Star and Clasp and the 1939-43 Star, announced the War Office yesterday.

PARIS RADIO APOLOGY

Apologising for Paris Radio going off the air for a few minutes yesterday afternoon, the announcer said, "It was due to circumstances beyond our control."

The Danish Kalundborg Station also went off the air.

RAISING A FLEET

Twenty of the fleet of ships sunk by the Germans during the Dnieper Battle have now been salvaged, says Moscow radio. The rest will also be salvaged.—Reuter.

LIFE—FOR BREAD

Five Frenchmen, found guilty of forging bread ration cards, were sentenced to hard labour for life and to confiscation of their property, says Vichy radio.

EX-F.A. CHIEF "WEAKER"

Sir Frederick Wall, 85-year-old ex-secretary of the Football Association, who is seriously ill at his home in Sutton (Surrey), was stated yesterday to be "a little weaker."

FINANCE—by W. J. DAVIES

Post-war Building Prospects

PREFABRICATION is on everybody's lips just now in connection with the big housing problems ahead. For the guidance of investors I may say many companies are directly or indirectly involved in the manufacture of the essentials. Just now the 5s. shares of British Steel Construction (Birmingham) are singled out following the 15 per cent. dividend which follows 7½ per cent. and 6 per cent.

It is a small concern capitalised at £70,000 with a reasonably strong balance sheet.

Although generally known as constructional specialists in hard tennis courts, swimming pools and the like, the En Tout Cas Co. is also concerned with prefabrication for building construction.

It has a fine record, 40 per cent. dividends having ruled for four years on the sixpenny Deferred shares which are priced about 3s. 6d. with 15½ per cent. on the 4s. Participating Preferred Ordinary priced 8s. 6d.

With a capital of £85,000 it is likewise a small concern, but the financial position is healthy and strong.

The Railway Dividends

WITHOUT anything sensational the Railway dividends proved a little more colourful than it was thought possible, the best being the Southern with 2 per cent. instead of 1½ per cent. on the Deferred stock, thus giving 8 per cent. yield at 25½.

Whenever speculation freshens in Rails, Southern Deferred always has a keen professional following, while as an investment the 5 per cent. Preferred Ordinary yielding about 6¼ per cent. appeals as being cheap at 7.8.

Second best achievement was the L.N.E.R. in declaring 2½ per cent. against 2¼ per cent. on the 4 per cent. Second Preference.

This is not likely to pacify Mr. Austin Kavanagh's Stockholders' Association which, at the coming annual meeting, is to demand the full 4 per cent. stockholders expected under the Railway Act of 1921. This is worth striving for if such propaganda keeps alive the claims of Railway Stockholders generally.

Tyre Alternative

ON the prospect of more profitable business to come in the change over to peace trading Dunlop Rubber shares are priced to yield under 4 per cent.

A similar business is that of the British Tyre and Rubber Company, offshoot of the powerful American Goodrich Company, and the shares as an investment show 5 per cent. on the price of 44s.

They have received 11 per cent., inclusive of 3 per cent. bonus for the past five years, well covered by profits, substantial amounts of which have been devoted to various reserves.

New Central Wits

IT is characteristic of "Kaffirs" that buoyant activity should coincide with the flood damage news, shadowed also by labour threats. It is true, of course, that good developments are anticipated adjoining the Blyvoor property of "West Wit Areas."

It is on the strength of this that New Central Witwatersrand are singled out. This "Kaffirette" having options over contiguous ground, and among various other assets, has a considerable interest in "Lydenburg Estates" which so far has proved one of the most successful of the Orange Free State prospecting ventures.

New Central Wit 5s. shares, hovering about 12s. 6d., may prove a speculation.

Forestal Lands

ARGENTINE investments are not everybody's choice nowadays, but nevertheless quite a fair interest is shown in Forestal Land shares.

Priced about 29s. they yield 6 per cent. on the 9 per cent. declared for the past four years, not allowing for tax relief.

Company controls extensive forest areas covered by Quebracho trees, the source of tanning materials, and has several subsidiaries concentrating on the extraction of this product essential to the leather industry.

It also has other interests and it is considered trading prospects are full of promise.

'Can Pac' Complications

THE Canadian Pacific Railway is at last resuming Ordinary dividends with a modest 50 cents, but this probably may prove a problem for some of the numerous shareholders.

Are all acquainted with the regulations governing the payment of such "dollar" dividends?

As a check on enemy shareholders, Certificates of British holders must have been "marked" in the name of a Stock Exchange firm.

This simplifies payment, otherwise dividends must be claimed personally, entailing formalities, trouble and expense.

SIR STAFFORD CRIPPS, Minister of Aircraft Production, said in London last night that, though Government inspection would probably be diminished after the war, he hoped that in industry an attempt would be made to maintain the highest quality by a system of inspection throughout all stages of manufacture.

We could not expect in Britain to excel on the basis of pure mass-production, but we had throughout our industrial history had a reputation for ingenuity and high quality. We must emphasise those capabilities.

Child Welfare Has a 'Danger'

"SO many public services exist to look after a child's physical and mental welfare that there is a danger that some parents may forget their personal repsonsibity to the child," says the new Roman Catholic Archbishop of Westminster (Dr. Bernard Griffin), in his Lent pastoral letter.

TOWARDS CLIMAX

"THE war," Goebbels warns the German nation, "is approaching a dramatic climax."

How dramatic can be gauged by the sudden, daring, utterly unexpected attack launched by powerful American Forces on the Japanese stronghold of Truk, 3,000 miles from Pearl Harbour.

Well may the enemy wonder at the gigantic military resources of the United Nations when we are able to strike with concentrated power in the Far East at the very moment we are preparing for our invasion of Europe.

FOR Japan in particular this thunderbolt is a warning that her day of judgment draws near. Tokio admits that, as a result of the Truk attack, "the war situation has increased with unprecedented and grave seriousness."

The Russian front is ablaze with victory. A second Stalingrad—this time at Korsun—has swallowed 10 German divisions. Staraya Russa has fallen. Next Wednesday, as the Soviet people celebrate the Anniversary Day of the Red Army, they will know that the glory of Russia's fight for freedom can never fade.

At home, in these embattled islands, preparations for the greatest enterprise in the history of war—the successful storming of the whole Continent of Europe—proceed with calculated audacity.

"IF you men can fight as well as you are training," General Eisenhower has told our troops, "God help the Nazis."

Great risks have to be borne, many privations endured, ere we grasp the prize of ultimate triumph.

How grim our task still is can be seen in the hand-to-hand fighting in the Anzio beach-head, where the Germans struggle with stubborn courage against the growing weight and pressure of our assaults.

The Hun is always tough until he is cracked wide open.

Our Health

THE Government's plans for a National Health Service are designed to guard and strengthen Britain's finest asset—the health of all her people.

Taking the "Truk" out of their Truculence!

FINNS MAY START THE LANDSLIDE

by WICKHAM STEED

WE are so used to having our news come hot from the front that some of us lose the good habit of sitting back and asking ourselves what it may mean.

I was so glad a month ago to hear of the Russian break-through near Leningrad that I forgot to wonder how Finland would take it.

Not till the Russians had cleared the southern shore of the Gulf of Finland as far west as the River Narva did I reflect that at Helsinki, the Finnish capital across the Gulf, people would be directly interested in the breaking of the German hold on the Leningrad region.

Now, I thought, Finlan' will have to make up her mind; and it will not be long before the creakings and groanings of that painful process reach our ears.

It has not been long. American warnings and Russian bombers helped, no doubt, to quicken the pace of Finnish reasoning.

The puzzle the Finns have to solve is hard in itself, and harder still when it is linked up—as it is linked up in German minds—with similar puzzles which the Rumanians, the Hungarians, and the Bulgars are worrying over.

For if one of the German satellites falls out of line, or actually surrenders, the effect of its example on the other

Sea, and Finland would have looked round for a fence to sit upon.

Here we have one reason why Hitler made such desperate, and not unsuccessful, efforts to hold on to northern and central Italy. He wanted to show that no member or satellite of the Axis could leave him in the lurch with impunity.

Finns' Dilemma

NOW it is the turn of Finland. Hitler is said to have 120,000 troops, mostly Austrian, in the country. What is to become of them if Finland throws up the sponge? This may be one of the points the Finns are trying to bargain about.

It is not pleasant to have a strong alien, ex-Allied force in one's country, and to have either to turn it out or to see it smashed or captured by another foreign army. The Finns may well be perplexed.

If Your Son is Missing

by The Archdeacon of Bradford

ABOUT a year ago I wrote a short article for "The Sunday Chronicle," as I felt I should like to send a message to the many readers who were going through the same experience as ourselves, of having a son reported "missing."

From the very many letters received I know the message brought some comfort in the dark days.

The letters I received were sad, yet beautiful in that they were full of fellow feeling and sympathy. I wonder how many have since heard good news. I hope a great many.

It is over two years now since we heard that our boy, a Fighter Pilot, was missing. No news has come, but we go on hoping that each day the good news may arrive.

It's bad enough to lose a son killed

THE VOICE OF

This is Wh
Soldier Ho

by DOROTHY T

Specially written for "The

VICTORY, say the President, the President, and General Eisenho a certainty, probably during this year

The sobering complement to these sta is that this victory will be bought by rivers spilled for our cause by the youth of the n

This youth is recruited, regardless of class an tion. All are paid according to the Army schedule from private to General, in any proportion to h and responsibilities.

On all fronts, a united nation fights—joined i discipline and common democratic comradeship.

In all wars, the contrast between the spirit of the front and the spirit of the civilians has given rise to breaks between the nation at the front and at home, and between the generations, too.

In all wars, the compensation of the soldier is the discovery, under fire, of the living reality of comradeship and mutual dependence.

Returning soldiers from all wars hope to bring home this spirit, and reconstruct the nation they have saved, in this spirit.

And in almost all wars they have been disappointed. The shattering of this illusion is what has repeatedly created the "lost generations," turning the bright faith of democratic brotherhood into cynicism and despair.

"The moment will come when thousands of our sons have an eye on a wrist watch, not to see whether it is time to stop, but time to go—time to hurl their so-young bodies at the enemy's steel, each knowing exactly what is at stake, for himself, his comrades, and his country.

What the Vision of Victory Means

ON the fronts, the vision of victory means a tightening of all ranks.

At home it means a loosening of all ranks.

At the front, every soldier prays that his own life will be spared. Not one of them wants to die. The instinct for survival is as strong in them as in you or me.

At home, the enemy presents himself through distant communiques. Presumably he will soon be beaten, and then, where will each of us be? The spectre of victory looms on the horizon, and with it the reckoning of the cost.

Each begins to eye the other with envy. Who is getting the most? Which industrialists? Which workers?

FINNS MAY START THE LANDSLIDE

by WICKHAM STEED

WE are so used to having our news come hot from the front that some of us lose the good habit of sitting back and asking ourselves what it may mean.

I was so glad a month ago to hear of the Russian break-through near Leningrad that I forgot to wonder how Finland would take it.

Not till the Russians had cleared the southern shore of the Gulf of Finland as far west as the River Narva did I reflect that at Helsinki, the Finnish capital across the Gulf, people would be directly interested in the breaking of the German hold on the Leningrad region.

Now, I thought, Finland will have to make up her mind: and it will not be long before the creakings and groanings of that painful process reach our ears.

It has not been long. American warnings and Russian bombers helped, no doubt, to quicken the pace of Finnish reasoning.

The puzzle the Finns have to solve is hard in itself, and harder still when it is linked up—as it is linked up in German minds—with similar puzzles which the Rumanians, the Hungarians, and the Bulgars are worrying over.

For if one of the German satellites falls out of line, or actually surrenders, the effect of its example on the other

Sea, and Finland would have looked round for a fence to sit upon.

Here we have one reason why Hitler made such desperate, and not unsuccessful, efforts to hold on to northern and central Italy. He wanted to show that no member or satellite of the Axis could leave him in the lurch with impunity.

Finns' Dilemma

NOW it is the turn of Finland. Hitler is said to have 120,000 troops, mostly Austrian, in the country. What is to become of them if Finland throws up the sponge? This may be one of the points the Finns are trying to bargain about.

It is not pleasant to have a strong alien, ex-Allied force in one's country, and to have either to turn it out or to see it smashed or captured by another foreign army. The Finns may well be perplexed.

If Your Son is Missing

by The Archdeacon of Bradford

ABOUT a year ago I wrote a short article for "The Sunday Chronicle," as I felt I should like to send a message to the many readers who were going through the same experience as ourselves, of having a son reported "missing."

From the very many letters received I know the message brought some comfort in the dark days.

The letters I received were sad, yet beautiful in that they were full of fellow feeling and sympathy. I wonder how many have since heard good news. I hope a great many.

It is over two years now since we heard that our boy, a Fighter Pilot, was missing. No news has come, but we go on hoping that each day the good news may arrive.

It's bad enough to lose a son killed

THE VOICE OF AMERICA

This is What Every Soldier Hopes For

by DOROTHY THOMPSON

Specially written for "The Sunday Chronicle"

VICTORY, say the President, the Vice-President, and General Eisenhower—is a certainty, probably during this year.

The sobering complement to these statements is that this victory will be bought by rivers of blood, spilled for our cause by the youth of the nation.

This youth is recruited, regardless of class and occupation. All are paid according to the Army schedule, and none from private to General, in any proportion to his hazards and responsibilities.

On all fronts, a united nation fights—joined in common discipline and common democratic comradeship.

In all wars, the contrast between the spirit of the front and the spirit of the civilians has given rise to breaks between the nation at the front and at home, and between the generations, too.

In all wars, the compensation of the soldier is the discovery, under fire, of the living reality of comradeship and mutual dependence.

Returning soldiers from all wars hope to bring home this spirit, and reconstruct the nation they have saved, in this spirit.

And in almost all wars they have been disappointed. The shattering of this illusion is what has repeatedly created the "lost generations," turning the bright faith of democratic brotherhood into cynicism and despair.

The moment will come when thousands of our sons have an eye on a wrist watch, not to see whether it is time to stop, but time to go—time to hurl their so-young bodies at the enemy's steel, each knowing exactly what is at stake, for himself, his comrades, and his country.

What the Vision of Victory Means

ON the fronts, the vision of victory means a tightening of all ranks.

At home it means a loosening of all ranks.

At the front, every soldier prays that his own life will be spared. Not one of them wants to die. The instinct for survival is as strong in them as in you or me.

At home, the enemy presents himself through distant communiques. Presumably he will soon be beaten, and then, where will each of us be? The spectre of victory looms on the horizon, and with it the reckoning of the cost.

Each begins to eye the other with envy. **Who is getting the most? Which industrialists? Which workers?**

The greater the pressure for win-

taxation. Willkie has asked for higher taxes. Neither of them took a stand on inflation. Willkie wants stronger measures. Neither of them even mentioned the National Service Act.

Governor Dewey, of course, promised a "great peace"—somehow, it seemed, to be achieved through the American States.

MOST important neither of them dealt at all with what will be the leading domestic problem of the next administration—namely, how to achieve full employment and avoid the usual post-war collapse and depression.

These lamentable performances are obviously not because none of these questions is being discussed. Actually, they are all being discussed in the Press, in serious magazines and reviews, and on public platforms.

Governor Dewey, at least, is thoroughly aware of these problems. It is therefore clear that the official party machine intends to capitalise, almost wholly, on the desire of the people to see new faces in the Federal Office.

Apparently they think if it were revealed that behind the new faces were only very old ideas or no ideas, their chances would be diminished.

It is not true that this general vacuity is characteristic of all Republicans. In the ranks of the Republican Party members are some of the best minds of the country—as some of the weakest heads are among Democratic politicians.

The main difference between Mr. Willkie and the two others is that Mr. Willkie is addressing the people, while the others are still addressing the Party machine, or the dominant economic interests and prejudices behind it.

So, for students of American public opinion, it is important to follow what Mr. Willkie is saying.

Dorothy Thompson: "Beware of a youth that comes home disillusioned."

For students of American party politics it is illuminating to read Governor Bricker and Governor Dewey.

But Mr. Roosevelt is Still Leading

THIS also explains why Mr. Willkie is making no secret of his candidacy. He knows that he will never be nominated unless he can roll up sufficient popular support.

The others, on the contrary, know that they also will never be nominated if they offend the party machine by nominating themselves.

Meanwhile the President is still leading over all other candidates, although by no means with a safe enough margin to assure him victory.

Altogether, the political scene and prospects are very unclear at present. They will be immeasurably influenced by the course of the war in the next few months, and at present any predictions in regard to the forthcoming elections are better not made.

Dorothy Thompson's U.S. cable appears every Sunday only in "The Sunday Chronicle."

reality, no one in this country need be without expert medical attention because he is too poor to afford it. The haunting dread of doctor's bills which has shadowed many a home will be lifted.

There is, of course, no compulsion, either for patients or doctors, to take part in this national plan. Those who still wish to have their own doctor or go to their own hospital will be free to do so.

Many details still have to be worked out. What we have before us is a hopeful plan, an augury, rather than a finished scheme.

If the plan is discussed in a wise spirit of co-operation and compromise, its bright promise will be fulfilled.

Remembrance

THERE will be heartfelt response to the Archbishop of Canterbury's call to remember our prisoners of war all over the world in our prayers to-day.

These brave men have an urgent claim upon our remembrance. They left these shores to war upon despotism. They are now cut off from their share in the crusade. Those unfortunate enough to be Japan's prisoners are treated with shocking brutality.

We shall think of all these men to-day, wherever they may be. The moving words of the prayer by the Bishop of Southwark, which we print to-day on the front page, will stir a responsive echo in all our hearts.

satellites might be very unpleasant from the German standpoint. And when we look at any of these matters it is always well to keep the German standpoint in view.

In Nazi Grip

THANKS to the folly of Finland in siding with Germany when Hitler attacked Russia in June, 1941, the Germans have held both shores of the Gulf of Finland and have been masters of the Baltic for more than two years.

They had already gone south-east through Jugoslavia and Greece to the Ægean, where they made our position in the eastern Mediterranean very uncomfortable.

Then Bulgaria and Rumania gave them access to the Black Sea: while a strong Rumanian army and a weaker Hungarian army helped them to push forward into southern Russia to take the Crimea and to enter the Caucasus.

Like Finland, these southern satellites banked on a German victory which, they thought, would bring them great territorial and other rewards. And they all submitted to German military and police control which has held them in a tight grip.

There was a moment last year when things looked as though the grip might be loosened or broken. This was when Italy surrendered.

If the whole of Italy had fallen into Allied hands there might have been a landslide from the Adriatic to the Black

For the Germans this is a test case. They care not a rap for Finland or her welfare, and there is not a great deal of plunder to be got amid the frozen lakes and snow-covered plains of the Finnish countryside.

But to lose Finland because German armies have been driven from the Leningrad region might mean that Rumania, too, would be panic-stricken at the German loss of Nikopol in the Dnieper Bend and the wiping out of the ten German divisions entrapped farther west.

If Rumania were to go, Hungary and Bulgaria might think thoughts of which neither Hitler nor Himmler nor the German General Staff would approve. Russia is already putting such thoughts into their minds.

Germany's Threat

GERMANY answers by promising an awful fate to turncoats. And there are enough German forces and police agents in all the satellite countries to give a disagreeable ring to these promises.

Nor is it only the military and the political aspects of their hold on satellite countries that the Germans care for. If Finland starts a stampede, all the foodstuffs, raw materials and other resources of South-Eastern Europe might be subtracted from Germany's economic power to resist the Allied blockade.

So, I feel, we ought to scan the rumours from and about Finland with these things in mind. Then we may see more clearly what is at stake.

not harder to have one reported as missing. You know nothing, you imagine everything.

A MOTHER, especially, cannot help wondering where her boy is.

Is anyone looking after him? Is he badly wounded? Is he properly fed and clothed? Thousands of such thoughts crowd into our minds.

It's a very hard time for you, but remember it's hard for them, too.

There is their anxiety of not being able to let you know where and how they are, that they are alive and all right. How to get news through to you. Yes, they must be just as anxious as we are.

What can you do? You feel so absolutely helpless and unable to do anything.

You must just go bravely on, doing your job whatever it is. Try to be as cheerful as you can for the sake of others. Be of good courage, keep a stout heart and a stiff upper lip.

I know how the thought of it comes over us at times, in the middle of our work, or some conversation, or at the pictures, or in the middle of a service.

We have to just pull ourselves together and go bravely on. Sometimes you feel the strain is going to prove too much. No, you can pull through by God's help. It's marvellous what we can do in His strength.

I said just now you felt you could do nothing, and this is hard after you have done so much for them from infancy upwards. Just patiently wait and remember there is one thing you can do, and it is a very big thing.

You can pray for them, and that

Contd. at foot of Col. 3, Page 5

ning the war, the greater pressure each group can bring. Stabilised farm prices? Everybody needs food—and they'll pay for it.

Renegotiated contracts, to squeeze out unconscionable profits? Where would the country be without the industrialists?

Raise wages? Easy, when even the threat of a strike can bring a nation to its knees.

Peace for the soldier means the reprieve of his life, the grant of the transcendent boon.

And peace for the soldier, because he is still young, and envy and greed have not frozen his blood, means the chance to help make a future for his country in which envy and greed are not the invisible rulers.

What the worker-soldier demands of his labour leaders is that they shall back him now, and be planning for the future, not plotting to grab another ten cents at his cost.

The Lesson Our Sons Now Know

WHAT the soldier who dreams of a business of his own demands of business is that it should leave some place for him and not monopolise the works while he is gone.

What the soldier-student interrupted in his studies is thinking of, is how the world got into this mess and how he can help to pull it out, if he survives.

Let politicians, labour leaders, industrialists, farmers, and black market operators beware of a youth that comes home disillusioned of their own people. That should worry all of us more than wages, dividends, or prices.

For at the front our sons have learned that the life of the community is more than the profit of the individual and that one can contemplate death only in the company of those who share a common purpose.

The Republican campaign for the Presidency has opened with two speeches by candidates, both of them Governors of States—Governor John W. Bricker, of Ohio, and Governor Thomas E. Dewey, of New York.

Each of these men has made a record as able State administrators. Each took the birthday of Abraham Lincoln, recognised as the regenerator of the Republican Party in the middle of the last century, as the occasion for his remarks.

Both are counter-candidates against Wendell Willkie, who is waging his campaign on leading political issues.

Apparently Governors Bricker and Dewey believe this is an unwise procedure. They think Willkie is talking his head off and his candidacy out.

There is an old and somewhat cynical political slogan in America that people never vote for anything, only against something. Both candidates are apparently engaged in building up things to be voted against.

Bricker's "against" is heavy taxation interference with private enterprise; Dewey, who is much more seriously taken as a candidate, avoided even these issues. In the name of Lincoln he made his campaign for States' right.

A wit remarked that Bricker had promised to do nothing as President, but to leave everything to private enterprise, while Dewey had also promised to do nothing, and to leave everything to the States.

Both candidates seem to assume that what America will need in the next four years is the weakest possible Government, and each presents himself in this rôle.

Neither said one word about the questions before Congress at this moment. Neither, for instance, took a stand on the soldiers' vote. Mr. Willkie has.

Neither took a stand on war-time

The Hun is Still Tough!

by FIELD-MARSHAL LORD MILNE

THE fierce fighting in the Anzio bridgehead continues.

The vicious German attacks which at first caused temporary Allied retirements have failed, and now a change in the weather has altered the situation relatively in our favour—of which our Forces are taking advantage.

No doubt the Allied General Staffs have learnt valuable lessons which will stand them in good stead when the time, now rapidly approaching, arrives for the grand assault upon Europe. The British people, too, should mark, learn and inwardly digest the lessons of Anzio.

The first is, that though the whole German Army and nation is clearly heading for ultimate disaster, it is only in places where they have suffered stunning defeat on the field of battle that the Germans show signs of a break in spirit.

THE German defeat in Russia is not the result of some clever coup, or nerve war or surprise in tactics. It is due to the remorseless pounding of months, carried to the pitch when human endurance can no longer stand the strain.

Witness the ten divisions in the pocket south of Kiev. Bombarded from the air, surrounded on all sides, half-dazed from high explosive, the German soldier continued to defy his enemy, and preferred death to surrender.

It may be, too, that the civilian population of Germany is more frightened of the Gestapo than of Allied bombs. At all events, neutral reports from Berlin show that the merciless bombing which the population has undergone has not yet cowed their spirit.

We must rid our minds of the idea that the Germans have ever shown signs of softness, or that they are not aware that the only hope left to them is their own resistance. The optimists who imagine that the invasion of Europe will bring about the immediate fall of Hitler are destined to grievous disappointment.

The second lesson is a corollary to the first. We must cultivate increased faith in the soundness of the judgment of our military leaders. Under the growing weight of their responsibilities they need, not our frantic criticism, but our firm support.

We might have remembered, in the first anxious days of Anzio, that events were in the firm grip of the same directing hand which had been responsible for the triumphs in North Africa.

In the testing months ahead we shall have full opportunity for a display of popular calmness, yes—and courage. There is little possibility of another Dunkirk, but if we are to take risks, we must be prepared to accept setbacks, and war cannot be won without taking risks.

This recurrent over-optimism and over-pessimism is on a par with the feelings aroused by the necessity of destroying an ancient building occupied by the Germans at Cassino.

It seems that there are still people who are unable to realise the seriousness of the dangers which threaten civilisation, and are still obsessed with the idea that we can destroy the German army without fighting it.

The Carroceto-Cassino area may now be regarded as one great battlefield. Seventeen German divisions are now reported in central Italy, and it is the task of defeating these on which General Clark's efforts are now concentrated.

The configuration of the ground does not make this easy, but it is probable that the threat to the German flank from the sea will compel the enemy to turn and fight, and thus open the way to decisive victory.

The Russians have shown that fighting is the only road to success, and that the best means of engaging the enemy decisively is to threaten a flank or a rearward communication.

EVEN so, the closing of the Luga gap on the northern front in Russia does not appear to have brought about the capture of any large portion of the German army.

It would seem to have made good its retreat so that the whole of the country between Lakes Ilmen and Peipus is now in Russian hands.

Columns advancing down the eastern shore of Lake Peipus and from Luga are nearing Pskov, a junction on the railway running west from Staraya Russa, the great German fortress whose capture has been announced.

Fierce resistance may be expected here, as a Russian success will turn the German front and lay the way open for an advance into Estonia and Latvia in conjunction with a similar movement along the Smolensk-Riga railway, with the object of taking Riga itself.

In the bend of the Dnieper the net has closed round the trapped German divisions. All Manstein's efforts to extricate them failed, and his Eighth Army has now been totally destroyed.

WE may, therefore, expect news soon from the extreme south of the movement on Kherson and Nikolayev, and also of the great outflanking movement towards Lwow, in southern Poland.

Wisely, Russia gives out no information short of success but not even the present state of the ground is likely to prevent the Russians from exploiting to the full the strategically unsound position into which the German armies have been forced in the Ukraine.

In the Far East our Allies, having secured their footing on the Marshall Islands, have lost no time in launching their attack on Japan's greatest naval base of Truk in the Caroline Islands, but up to date no details are available.

Field-Marshal Lord Milne's weekly war review appears only in "The Sunday Chronicle."

y, no one in this country be without expert medi- attention because he is poor to afford it. The nting dread of doctor's which has shadowed y a home will be lifted.

is, of course, no compul- either for patients or tors, to take part in this onal plan. Those who wish to have their own or or go to their own pital will be free to do so. details still have to be ked out. What we have re us is a hopeful plan, augury, rather than a shed scheme.

plan is discussed in a spirit of co-operation compromise, its bright mise will be fulfilled.

In the testing months ahead we shall have full opportunity for a display of popular calmness, yes —and courage. There is little possibility of another Dunkirk, but if we are to take risks, we must be prepared to accept setbacks, and war cannot be won without taking risks.

This recurrent over-optimism and over-pessimism is on a par with the feelings aroused by the necessity of destroying an ancient building occupied by the Germans at Cassino.

It seems that there are still people who are unable to realise the seriousness of the dangers which threaten civilisation, and are still obsessed with the idea that we can destroy the German army without fighting it.

The Carroceto-Cassino area may now be regarded as one great battlefield. Seventeen German divisions are now reported in central Italy, and it is the task of defeating these on which General Clark's efforts are now con- centrated.

The configuration of the ground does not make this easy, but it is probable that the threat to the German flank from the sea will compel the enemy to turn and fight, and thus open the way to decisive victory.

The Russians have shown that fighting is the only road to success, and that the best means of engag- ing the enemy decisively is to threaten a flank or a rearward communication.

EVEN so, the closing of the Luga gap on the northern front in Russia does not appear to have brought about the capture of any large portion of the German army.

It would seem to have made good its retreat so that the whole of the country between Lakes Ilmen and Peipus is now in Russian hands.

Columns advancing down the eastern shore of Lake Peipus and from Luga are nearing Pskov, a junction on the railway running west from Staraya Russa, the great German fortress whose capture has been announced.

Fierce resistance may be ex- pected here, as a Russian success will turn the German front and lay the way open for an advance into Estonia and Latvia in con- junction with a similar movement along the Smolensk-Riga railway, with the object of taking Riga it- self.

In the bend of the Dnieper the net has closed round the trapped German divisions. All Manstein's efforts to extricate them failed, and his Eighth Army has now been totally destroyed.

WE may, therefore, expect news soon from the extreme south of the movement on Kherson and Nikolayev, and also of the great outflanking movement towards Lwow, in southern Poland.

Wisely, Russia gives out no in- formation short of success but not even the present state of the ground is likely to prevent the Russians from exploiting to the full the strategically unsound position into which the German armies have been forced in the Ukraine.

In the Far East our Allies, having secured their footing on the Marshall Islands, have lost no time in launching their attack on Japan's greatest naval base of Truk in the Caroline Islands, but up to date no details are available.

Field-Marshal Lord Milne's weekly war review appears only in "The Sunday Chronicle."

The Tommy Overseas wants more than concerts

My Plan for Troops Abroad to See All-Star Footballers

by MAJOR FRANK BUCKLEY

ASK a British Tommy overseas what he would like to see—an E.N.S.A. concert or a football match between International players. What would he say? The answer would be "both." The time has come to give him both.

The Services overseas have their E.N.S.A. shows, and I suggest the Army and R.A.F. should now send on tour abroad their star teams of Internationals which have entertained so many thousands of people in this country during the war.

By playing together for good causes they have become first-class sides — better than England has fielded many a time—and no more popular move could be made for the troops in North Africa, the Middle East and elsewhere than to send out these teams to meet in a series of matches.

Possibly they could also play in Italy, at Naples, where, according to our old friend Billy Garbutt, of Arsenal and Blackburn Rovers, who used to be a coach there, a modern football stadium is (or was) available.

DITCHBURN, star goal-keeper of Spurs, R.A.F. and England, makes a spectacular flying save in yesterday's Wembley International. Major Buckley would like him in a "Soccer-for-the-troops" touring team.

A Selection

The stuff to give the troops, I suggest, is a match behind the lines chosen from teams like this:

ARMY—**Swift** (Manchester City); **Carabine** (Third Lanark) and **L. Compton** (Arsenal) or **F. Taylor** (Wolves); **Britton** (Everton), **Cullis** (Wolves), and **Mercer** (Everton); **Powell** (Leeds United), **Dix** (Spurs), **Lawton** (Everton), **Hagan** (Sheffield United), and **D. Compton** (Arsenal) or **Pearson** (Newcastle United).

R.A.F.—**Ditchburn** (Spurs); **Scott** (Arsenal) and **Hardwick** (Middlesbrough); **Soo** (Stoke City), **Hayward** (Blackpool), and **Burgess** (Spurs); **Matthews** (Stoke City), **Carter** (Sunderland), **Dodds** (Blackpool), or **Drake** (Arsenal), **Mortensen** (Blackpool), and **L. Smith** (Brentford).

I have named these teams as an example from elevens the Services selectors have previously chosen.

Before the fall of France the British Army sent a team to play in Paris, Amiens and Lille, so there is a precedent for the project.

Last War Lesson

But why had such men as Billy Garbutt to go abroad at all to get jobs as coaches?

We needed them here, and our need will be greater after this war. Old British players like Garbutt (who was still in Italy when war broke out and may now be interned there) taught the Continentals so well that they licked us—too many of them licked us.

After the war such stars as Willis Edwards (Leeds United), Eric Brook (Manchester City), Charlie **Phillips (Aston Villa), Eddie Hapgood and Clifford Bastin (Arsenal), Harry Hibbs (Birmingham), Stanley Cullis** (Wolves) and "Warney" Creswell (Everton), to name only a few, should be trained by the F.A. or Football League, or both, to act as managers, coaches, referees, judges of referees, ground inspectors and so on.

Such men have adorned the game and should be helped and kept in the game.

Stanley Matthews, ace winger of Stoke and England. He also played at Wembley yesterday.

School Coaches

The wealth of the F.A.—built up by players' exhibitions—might be used to equip such players to assist in the game's rebuilding and advancement.

Having been a player I know the pitfalls of a football life and the lack of prospect so many face as their playing careers close.

The educational side should now be developed. Imagine the appeal Bastin or Brook would make as football coach to elementary schoolboys.

Football has been too conservative in its outlook. And we have mostly been guilty of looking at the game through club spectacles.

The football I visualise is a game not only run on wider international lines as I outlined last Sunday, but on expert lines throughout and with expert help at every turn for those who need it.

War Agricultural Emergency Committees are giving talks and expert help to farmers. Football with its 100,000 gates and boundless scope should follow suit. It was definitely formed on a "brotherhood of clubs" basis, but has become the reverse. There has been so much rivalry that the brotherhood idea has disappeared.

The League could return to its original basis by a mutual-help scheme. Expert managers and coaches could be sent to languishing clubs to overhaul their training of players and playing methods.

1937 HEADLINE BOY'S MIRACLE OPERATION

Thirteen - years - old schoolboy, Derek Harper, injured in a road accident seven years ago, greets a nurse in St. Bartholomew's Hospital, St. Albans.

Hospital Boy's 7-year Fight to Play Again

By T. W. TWIGGE

SO that little Derek Harper may one day run about and play games like any other boy, surgeons at St. Bartholomew's Hospital, St. Albans, last week performed the remarkable operation of joining his legs together.

If successful, it will be one of the last he will have to undergo before he has a new heel to his left leg. Another operation will separate his legs again. Then a skin graft will be necessary.

Derek was a Headline Boy of 1937. He made the tragic kind of headline that we read even in peacetime. Crossing a road, he was run over, his right hand nearly severed, his left leg slashed from thigh to heel.

At the age of six Derek Harper, whose home is at Ilford, Essex, began a small boy's battle against disfigurement and being "different." For seven years his life has been interrupted by one operation after another.

"He has never made a murmur or complaint," his mother told me yesterday.

Fine Character

"But Derek has a fine character. He shows no bitterness, and has all the fun and mischief of any other boy of his age. He worships his baby sister Jacqueline."

Derek made the second headline of his life in 1939, when he was awarded £2,000 damages.

"We knew he was still a boy when he made funny drawings of the judge in court," said Mrs. Harper.

Now, as he waits patiently for his next operation, Derek makes another headline. Surgeons expect that he will be able to walk within a month of the final opera-

ALL JOBS BACK AT AUSTIN'S

MR. L. P. LORD, Vice-Chairman of the Austin Motor Co., Ltd., referring to the reproduction in the "Eighth Army News" of a letter to Private S. Barnsley, former clerk at the Austin Motor Works Aero Company, warning him not to expect his job back after the war, made this statement yesterday:

"Unfortunately Barnsley was replied to by the assistant head of a minor department without reference to his seniors."

The possibility of post-war employment at the aero factory, which the Austin Motor Co. managed on behalf of the Ministry of Aircraft Production, depended entirely on the work entrusted to the factory by the Ministry.

Personal Pledge

As to prospects at the Austin Motor Works, Mr. Lord added:

"I personally addressed our shop stewards and staffs months ago,

'BIG POWERS CAN STOP THE NEXT WORLD CONFLICT'

By WALTER NASH

New Zealand Minister of Finance

(In a special interview with H. D. Liversidge)

WORLD War Three is assured within the next generation unless Britain and the Empire, the United States, Russia and China reach mutual agreement. It is imperative for the first three nations to achieve this.

Neither Britain nor America, individually or collectively, can ever dominate the world's peace. Their responsibility, however, and their contribution to world security, is greater than that of any other two units.

Permanent peace can only be gained when peoples appreciate and respect the responsibilities of each. Peace is impossible if certain sections of the globe are allowed to go hungry. Before the war half the peoples of the world were under-nourished. That must cease.

International security is undeniably linked with individual security. Countries controlling resources elsewhere should never again exploit those resources, unless they provide improved standards of living in countries from which that wealth is taken.

Unless the individual has easier access to a better mode of life, then nations will again tread the road that leads to world disaster.

In pre-war years the British Commonwealth obtained high standards, socially and industrially. That, to my mind, brings inevitable responsibility on the Commonwealth, more than any other combined body of peoples, to assist others.

Our resources must be made available to the rest of the world to spread wider international security and understanding.

Foundations Laid

This is not dreamy idealism, but a sane formula for the prevention of future world conflict and turmoil. To save civilisation from future horror and bloodshed there must be a United Nations organisation with power to take prompt action against anyone who menaces world peace.

Peace can only be agreed to. Without a world central organisation we can save neither peace nor ourselves. This need not mean sacrifice of sovereignty, but collective security.

I think it is possible to ensure permanent peace with agreed force behind it, namely, an international police force. The United Nations have already laid certain foundations for future world peace.

The League of Nations failed because it made no power to ensure that its decisions were carried out. We should benefit from this experience. Article 16, for instance, provided for sanctions—voluntary sanctions. Automatic sanctions are essential.

If these fail to stop an aggressor nation then combined physical force should be applied.

War criminals must pay for their crimes. Dictator Powers must be brought to judgment and rendered harmless. Yet we must realise that no nation can be kept in a perpetual state of subjection. Oppression only leads to martyrdom and insurrection.

In any case, the Atlantic Charter provides for equal opportunity for both victor and vanquished.

In my opinion, aviation should become an instrument of post-war peace. I hope international aviation will be internationally controlled. The Empire will move along every avenue to achieve this goal.

If we fail, we shall try to put British air lines under Commonwealth control. I would advocate an international air force.

In promoting this better world I feel that the Empire must come closer together. To cement these relations there will have to be—apart from the rights of sovereignty and autonomy—greater unification in economic and foreign affairs along the lines recently suggested by Lord Halifax in Toronto.

Lord Hartington Recalled

WITHIN a few hours of his crushing defeat in the West Derbyshire by-election, the Marquess of Hartington, 26-year-old Coldstream Guards' officer, returned to Churchdale Hall, near Bakewell, the home of his father, the Duke of Devonshire, to find a telegram recalling him to his regiment.

On Friday, after the declaration of the poll, he told electors: "It has been a good fight. Now I am going to fight for you at the front. Without our winning that war, there can't be any home front."

BIG NEW U.S. CARRIER

The 27,500-ton aircraft carrier Shangri-La, longest ship built in the U.S., will be launched at Norfolk, Virginia, on Thursday. She will be named by Mrs. Doolittle, wife of Major-General Doolittle, who led the bombing raid against Tokio in 1942.

THIS PAGE IS DECLASSIFIED IAW EO 13526

I Would Go

I would gladly co-operate in a visit to failing clubs under such a scheme—expenses only to be paid.

Unsuccessful clubs that would not collaborate would be told to come into line or retire from the League and make way for a more progressive concern.

Let no man be able any longer after the war to point a finger at big football and say, "So-and-so was a national favourite. He drew tens of thousands into grounds. Where is he now? Down and out!"

Continued from Page 4

IF YOUR SON IS MISSING

is a very big thing. That can never be taken away from you.

I often think of the Mother of Jesus, the Blessed Virgin Mary, standing at the foot of the Cross, absolutely helpless, watching her Son in His agony, not able to do a thing for Him. Yet she was there. Of course, that is where she would be.

She was praying for Him. It was the only thing she could do. We do not know what those prayers meant for Him.

Prayer is the greatest force in the world. Your boy is in God's hands, wherever he may be. He can never get outside the range of God's keeping. Your boy is very dear to you, and he is very dear to God.

Hold on, brave soul, put your whole trust in God, live a day at a time, and all will be well. Good news may be on its way to you.

You must not give up hope. This would be disloyal to them. It may be we shall have to wait until after the war, and then many of them will miraculously turn up.

These young men of the Fighting Forces are just wonderful. They give their all cheerfully and without question. They give their lives, and many of us have not been asked to do this.

They never think of themselves or of their own safety. What we have to go through at home is nothing compared with what the men in the Forces go through, on land, sea or in the air.

NIGHT after night we can hear the roar of the engines as they go out, Bombers and Fighters in great numbers.

And then comes the news, five, 15, 25, 35 of our planes missing, or, "only one of our planes is missing." But why use the word "only"? Somebody's sons were in that plane.

Just one last word. We have got to build a new world and we must begin to think about it now.

We must not let all this sacrifice be in vain. We must have a world from which war shall be abolished for ever.

A world in which men can brothers be, and in which there shall be equal opportunities for all. A world from which want, disease, squalor, unemployment and insecurity have been abolished. A world of justice and righteousness.

And again to you anxious ones, I say, days come and days go, and you wonder each day as it dawns if you will hear from your loved one. I pray you will in God's good time and that the news may be the best you have ever had.

God give you courage to go bravely on.

Text for To-day

Lead me, O Lord, in Thy righteousness because of mine enemies; make Thy way straight before my face.

—*Psalm V. 8.*

yesterday:—

"In all the operational flying I have done, I have never had to bale out or been wounded.

"In fact I never had a single bullet hole in my plane until quite recently—when it was riddled with 71 bullet and cannon shell holes."

Made History

It was Blakeslee who made aviation history about two months ago when he led a formation of Mustangs, the new long-range fighters, to Kiel, covering and escorting American bombers.

"That was the furthest fighters had ever penetrated into Germany up to that time," Blakeslee said, "and the Jerries had a shock."

"They hadn't expected us to get that far. Everything worked out fine, though we had a few scraps with German twin-engined fighters."

'Hate Nazis For Their Crime'

"YOU should hate the Germans for the crime against your sons," said Quentin Reynolds, at a war stamp rally in Toronto. He hoped the Allies would go to the peace table with "hate in their hearts."

"Russia will be easy to do business with," he added. "She will be as sincere, honest and friendly an ally in peace as in war."

RUSSIAN HONOURS

A photograph of General Eisenhower and an account of his military career were printed in the Red Army newspaper "Red Star" yesterday in recording the award to him of the Order of Suvorov. All Russian newspapers printed on their front page the announcement of the Soviet awards to U.S. officers.

SINGING BRIDEGROOM

A U.S. soldier, Sgt. Rob Roy Crummine, of Ohio, sang the ballad, "I Love You Truly," as a solo when he was married to Miss Betsy Larson, of the American Red Cross, at Taunton, Somerset.

BOMBER DOWN IN SEA

When a heavy bomber came down in the Channel off Abbotsbury Beach, Dorset, nine of the crew of ten were rescued by Mr. A. Tuddy and Mr. D. Arnold, local fishermen.

long before the Government statement on re-employment was mooted.

"I asked them to tell everyone who had a friend or relation in the Services that we want all our ex-employees to report back to the works for reinstatement immediately upon demobilisation.

"We have promised on many occasions that we will take back every ex-Serviceman, whatever his injuries.

"We will put him through our rehabilitation shop, and if he is finally not fit for his previous job we will train him for another."

Fashion Flash

By DORA SHACKELL

BRIGHT as a daffodil against your spring coat is this cap, made from the wool left over when you make a pair of gloves.

Try it in shell-patterned crochet as illustrated. This is an arrangement of 1 double crochet, 3 treble, 1 double crochet in the same stitch. Miss 2 stitches and repeat.

Naturally, you work the pattern more closely at the centre of the crown, in order to fan out into a nearly flat circle.

W.A.A.F. Vacancies

There are still vacancies in the W.A.A.F. for girls to be trained as wireless operators and electricians.

tion.

SALVAGE: URGENT NEW APPEAL

AN urgent appeal to the nation to collect more salvage, particularly paper, rags and bones, "during the coming months," was issued yesterday by the Ministry of Supply in a special circular to local authorities.

Next month there will be an intensive salvage "round-up" by local authorities with the help of the W.V.S. who will make a house-to-house canvas.

The Ministry say that imports must be reduced to a minimum to release cargo space for more vital uses.

Poland Can't Be Strong Unless—

THERE cannot be a strong Poland without co-operation with the Soviet Union, said the Soviet periodical "War And The Working Class" yesterday.

"When, to-day, the Soviet people discuss the necessity of a strong Poland, and admit the possibility of a generous interpretation of Polish ethnographical frontiers, they envisage a Poland directed by Democratic forces which will understand the mistakes made in the past."—Reuter.

70 'Terrorists' Tried in Paris

SEVENTY "terrorists" were tried by a Paris court-martial this week, Berlin radio announced yesterday.

Among them was the man the Germans claim as the assassin of Ritter, an official of the German manpower authorities in France.

Forty were sent to prison for varying terms. The remainder have not yet been sentenced.—B.U.P.

SOVIET WILL NEED CREDIT

Russia will invite big long-term credits after the war, said yesterday's issue of the Soviet periodical "War and the Working Class."

"It is clear that the scale of our post-war imports will depend to a considerable extent on the scale and conditions of the credits available," it said.

"SEND ME OVERSEAS"

Private W. Hough, 21-year-old Pioneer, asked at an Aldershot court-martial yesterday to be sent overseas so that he could become a better soldier. He pleaded guilty to offences at the Aldershot Detention Barracks, where he is serving a 14 months' sentence. The court's decision will be announced later.

BRAVED BLAZING GAS

Two soldiers who showed great courage in removing a blazing gas cylinder from a burning house—Staff Sergt. R. A. Criddle, of Astley Hill, Bristol, and Gunner L. Gomer, of Beda-road, Canton, Cardiff—have been commended by Lieut.-General E. C. A. Schreiber, G.O.C.-in-C. Western Command.

JAPS' "DEATH WHISPER"

"Whispering Death" is the name Japanese soldiers on the Burma front have given to the R.A.F. Beaufighter owing to its almost silent approach in swoops over the jungle.

HORSE IS AIR MASCOT

"Every mascot ought to fly at least once," say the pilots of a Canadian night intruder squadron, but they fly Mosquitos—and Hans, their mascot, is a horse. Hans is pastured in a field next to their mess.

Children's Crossword

Here, children, is a Crossword Puzzle especially for you.

Solve the puzzle with what you consider are the best answers. Cut it out and send it with your full name and address, and age, to:

CHILDREN'S CROSSWORD No. 40,
"THE SUNDAY CHRONICLE,"
10, GOUGH-STREET,
LONDON, W.C.1.

Six prizes of children's books (boys or girls) will be awarded to the senders of the first six correct solutions opened.

No envelopes will be opened before Wednesday.

Age limit is 15.

CLUES.—ACROSS:

1. You have these at school.
8. Made of oatmeal.
9. Sailor.
11. The edge of a slope or hill.
12. Half.
13. Three times.
14. Wooden hut.
15. High mountain.
17. Fashion.
19. A notion.
22. Perform.
23. Depart.
25. Distant.
26. Once more.
27. Steamship.

DOWN:

1. To bowl underhand.
2. The planet we live on.
3. A stock laid up for supply.

£25 Crossword on Back Page

I Would Go

I would gladly co-operate in a visit to failing clubs under such a scheme—expenses only to be paid.

Unsuccessful clubs that would not collaborate would be told to come into line or retire from the League and make way for a more progressive concern.

Let no man be able any longer after the war to point a finger at big football and say: "So-and-so was a national favourite. He drew tens of thousands into grounds. Where is he now? Down and out!"

Continued from Page 4

IF YOUR SON IS MISSING

is a very big thing. That can never be taken away from you.

I often think of the Mother of Jesus, the Blessed Virgin Mary, standing at the foot of the Cross, absolutely helpless, watching her Son in His agony, not able to do a thing for Him. Yet she was there. Of course, that is where she would be.

She was praying for Him. It was the only thing she could do. We do not know what those prayers meant for Him.

Prayer is the greatest force in the world. Your boy is in God's hands, wherever he may be. He can never get outside the range of God's keeping. Your boy is very dear to you, and he is very dear to God.

Hold on, brave soul, put your whole trust in God, live a day at a time, and all will be well. Good news may be on its way to you.

You must not give up hope. This would be disloyal to them. It may be we shall have to wait until after the war, and then many of them will miraculously turn up.

These young men of the Fighting Forces are just wonderful. They give their all cheerfully and without question. They give their lives, and many of us have not been asked to do this.

They never think of themselves or of their own safety. What we have to go through at home is nothing compared with what the men in the Forces go through, on land, sea or in the air.

NIGHT after night we can hear the roar of the engines as they go out, Bombers and Fighters in great numbers.

And then comes the news, five, 15, 25, 35 of our planes missing, or, "only one of our planes is missing." But why use the word "only"? Somebody's sons were in that plane.

Just one last word. We have got to build a new world and we must begin to think about it now.

We must not let all this sacrifice be in vain. We must have a world from which war shall be abolished for ever.

A world in which men can brothers be, and in which there shall be equal opportunities for all. A world from which want, disease, squalor, unemployment and insecurity have been abolished. A world of justice and righteousness.

And again to you anxious ones, I say, days come and days go, and you wonder each day as it dawns if you will hear from your loved one. I pray you will in God's good time and that the news may be the best you have ever had.

God give you courage to go bravely on.

Text for To-day

Lead me, O Lord, in Thy righteousness because of mine enemies: make Thy way straight before my face.

—*Psalm V. 8.*

yesterday:—

"In all the operational flying I have done, I have never had to bale out or been wounded.

"In fact I never had a single bullet hole in my plane until quite recently—when it was riddled with 71 bullet and cannon shell holes."

Made History

It was Blakeslee who made aviation history about two months ago when he led a formation of Mustangs, the new long-range fighters, to Kiel, covering and escorting American bombers.

"That was the furthest fighters had ever penetrated into Germany up to that time," Blakeslee said, "and the Jerries had a shock."

"They hadn't expected us to get that far. Everything worked out fine, though we had a few scraps with German twin-engined fighters."

'Hate Nazis For Their Crime'

"YOU should hate the Germans for the crime against your sons," said Quentin Reynolds, at a war stamp rally in Toronto. He hoped the Allies would go to the peace table with "hate in their hearts."

"Russia will be easy to do business with," he added. "She will be as sincere, honest and friendly an ally in peace as in war."

RUSSIAN HONOURS

A photograph of General Eisenhower and an account of his military career were printed in the Red Army newspaper "Red Star" yesterday in recording the award to him of the Order of Suvorov. All Russian newspapers printed on their front page the announcement of the Soviet awards to U.S. officers.

SINGING BRIDEGROOM

A U.S. soldier, Sgt. Rob Roy Crumrine, of Ohio, sang the ballad, "I Love You Truly," as a solo when he was married to Miss Betsy Larson, of the American Red Cross, at Taunton, Somerset.

BOMBER DOWN IN SEA

When a heavy bomber came down in the Channel off Abbotsbury Beach, Dorset, nine of the crew of ten were rescued by Mr. A. Tuddy and Mr. D. Arnold, local fishermen.

...ook before the Government statement on re-employment was mooted.

"I asked them to tell everyone who had a friend or relation in the Services that we want all our ex-employees to report back to the works for reinstatement immediately upon demobilisation.

"We have promised on many occasions that we will take back every ex-Serviceman, whatever his injuries.

"We will put him through our rehabilitation shop, and if he is finally not fit for his previous job we will train him for another."

Fashion Flash

By DORA SHACKELL

BRIGHT as a daffodil against your spring coat is this cap, made from the wool left over when you make a pair of gloves.

Try it in shell-patterned crochet as illustrated. This is an arrangement of 1 double crochet, 3 treble, 1 double crochet in the same stitch. Miss 2 stitches and repeat.

Naturally, you work the pattern more closely at the centre of the crown, in order to fan out into a nearly flat circle.

W.A.A.F. Vacancies

There are still vacancies in the W.A.A.F. for girls to be trained as wireless operators and electricians.

Children's Crossword

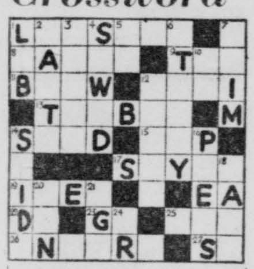
Here, children, is a Crossword Puzzle especially for you.

Solve the puzzle with what you consider are the best answers. Cut it out and send it with your full name and address, and age, to:

CHILDREN'S CROSSWORD No. 40,
"THE SUNDAY CHRONICLE,"
10, GOUGH-STREET,
LONDON, W.C.1.

Six prizes of children's books (boys or girls) will be awarded to the senders of the first six correct solutions opened.

No envelopes will be opened before Wednesday.



Age limit is 15.

CLUES.—ACROSS:

1. You have these at school.
8. Made of oatmeal.
9. Sailor.
11. The edge of a slope or hill.
12. Half.
13. Three times.
14. Wooden hut.
15. High mountain.
17. Fashion.
19. A notion.
22. Perform.
23. Depart.
25. Distant.
26. Once more.
27. Steamship.

DOWN:

1. To bowl underhand.
2. The planet we live on.
3. A stock laid up for supply.
4. Past tense of "sew."
5. Upon.
6. Like steel.
7. Edge of a hat.
10. Part of verb "to be."
12. Sometimes used for writing on.
14. You may make one in frosty weather.
16. Excuses.
18. Spaniels have long ones.
20. To put on.

...tion.

SALVAGE: URGENT NEW APPEAL

AN urgent appeal to the nation to collect more salvage, particularly paper, rags and bones, "during the coming months," was issued yesterday by the Ministry of Supply in a special circular to local authorities.

Next month there will be an intensive salvage "round-up" by local authorities with the help of the W.V.S. who will make a house-to-house canvas.

The Ministry say that imports must be reduced to a minimum to release cargo space for more vital uses.

Poland Can't Be Strong Unless—

THERE cannot be a strong Poland without co-operation with the Soviet Union, said the Soviet periodical "War And The Working Class" yesterday.

"When, to-day, the Soviet people discuss the necessity of a strong Poland, and admit the possibility of a generous interpretation of Polish ethnographical frontiers, they envisage a Poland directed by Democratic forces which will understand the mistakes made in the past."—Reuter.

70 'Terrorists' Tried in Paris

SEVENTY "terrorists" were tried by a Paris court-martial this week, Berlin radio announced yesterday.

Among them was the man the Germans claim as the assassin of Ritter, an official of the German manpower authorities in France.

Forty were sent to prison for varying terms. The remainder have not yet been sentenced.—B.U.P.

SOVIET WILL NEED CREDIT

Russia will invite big long-term credits after the war, said yesterday's issue of the Soviet periodical "War and the Working Class."

"It is clear that the scale of our post-war imports will depend to a considerable extent on the scale and conditions of the credits available," it said.

"SEND ME OVERSEAS"

Private W. Hough, 21-year-old Pioneer, asked at an Aldershot court-martial yesterday to be sent overseas so that he could become a better soldier. He pleaded guilty to offences at the Aldershot Detention Barracks, where he is serving a 14 months' sentence. The court's decision will be announced later.

BRAVED BLAZING GAS

Two soldiers who showed great courage in removing a blazing gas cylinder from a burning house—Staff Sergt. R. A. Criddle, of Astley Hill, Bristol, and Gunner L. Gomer, of Beda-road, Canton, Cardiff—have been commended by Lieut.-General E. C. A. Schreiber, G.O.C.-in-C. Western Command.

JAPS' "DEATH WHISPER"

"Whispering Death" is the name Japanese soldiers on the Burma front have given to the R.A.F. Beaufighter owing to its almost silent approach in swoops over the jungle.

HORSE IS AIR MASCOT

"Every mascot ought to fly at least once," say the pilots of a Canadian night intruder squadron, but they fly Mosquitos—and Hans, their mascot, is a horse. Hans is pastured in a field next to their mess.

RADIO—by Jonah Barrington

An Open Letter To J. B. Priestley

MY dear JOHN BOYNTON PRIESTLEY,—

When the gods descend from Olympus to walk among mortal men—mere variety producers, compères, comics, crooners and the like—they should first learn the rules of the road. Otherwise they get hurt.

You, sir, have descended from the stratosphere of your fine plays, sturdy books, trenchant post-scripts, to disport in the rather garish, noisy, elbow-shoving arena of radio variety.

I know you did it in good heart, hoping to raise the tone of the place. But you didn't learn the rules. And I'm sorely afraid you'll get hurt.

"Radio Post," the new £350 Sunday nig... variety show, sponsored and compèred by yourself, doesn't register. And, as one who has sweated and suffered to learn the job of variety production, I would like to tell you why.

1. It is 90 per cent talk. Now, our chaps overseas are short of radio sets. Listening is largely communal—in canteens, tents, huts, &c. For every chap that wants to listen attentively, nine don't. Therefore, you have to arrest their attention somehow—by music, by good comedy, by a big variety name. You certainly won't get them by opening with a short story . . .

A Chatty Job

2. Compèring is a job for smooth-voiced, smart-alick small-timers (I do a lot of it myself), and should be chatty, informal, casual. Nobody, knowing you for a great man, either expects or wants you to fulfil these conditions. Leave it to us little 'uns.

3. Left-wing propaganda and variety are, and always will be, impossible bedfellows. The only dance tune you permitted us was "Dusty Shoes"—all about unemployed—with yourself singing out at the end "Dusty Shoes worn by men thrown out on the road—we'll never let it happen again!" That's not variety, Mr. Priestley.

✦

4. Margaret Lockwood reading a letter to a certain "Mike" overseas, with its "do you remember, darling, do you remember," to soft music, I found in questionable taste. I think I'm speaking for the Forces when I say that there are certain secret places of the heart which should not be laid bare in variety.

5. If you want to discuss housing—prefabrication, washing machines, refrigerators, labour problems—then for the love of Priestley do it in a straight talk. *Then* we know what we're in for, and can give you our attention.

Let Wayne Compère

6. You had Naunton Wayne in your bill. Why not let him compère? You had a fine orchestra, at three guineas a man, sitting by. Why not give them something to play?

You had Sydney Howard. Why not give him something funny?

When I started this letter I felt like an M.T.B. going into action against a battleship. I still do. And I have given all my precious space to it only because I am your fervent admirer, because I feel you are damaging your reputation, because I have just read your fine

Star with the Gestapo look

by ANTHONY GIBBS

Hostages

At the Plaza.

EVEN with Paul Lukas in the Gestapo and Luise Rainer's father in the concentration camp, the old, old story of national resistance and German brutality in the occupied territories is difficult to tell anew.

Frankly, I had expected something better of the heroine of "The Good Earth" than the exophthalmic apathy of the young lady of Czechoslovakia.

Her expression never varies, whether her collaborationist father is sobbing for help, or the innocent hostages are being mown down while she and S.S. Obergruppenfuehrer Lukas watch from the balcony.

The lesser lights are admirable. You will find the young officer who got tight in the washroom, became maudlin, and walked into the sea, as beautiful and unexpected as the Czechoslovakian coastline itself.

Gung Ho!

At the Tivoli.

I HAD thought this might have had something to do with Herr P. G. Wodehouse. Not so. The wording is Chinese.

The scene is Makin Island and this is the grim account of the landing of the United States marines in that inhospitable spot.

Randolph Scott and Noah Beery, Jr., share the honours.

Candlelight in Algeria

At the Regal.

A MOST intelligent and exciting movie, this is the fictional prelude to the historic landing of General Mark Clark and his men by submarine in North Africa.

There's adventure, there's

For and Against the New Hamlet

by SYDNEY W. CARROLL

Hamlet. (*The New Theatre.*)

MY passion for Shakespeare is great. It was inherited. My father, one of the early Australian poets, used to recite him to me by the yard. I have for half a century or more adored to see Shakespeare acted, loved to read him, to study his meanings and repeat his lines.

I take no special credit for this. I can claim no monopoly of the feeling. It is the legacy of every true born Englishman. Shakespeare is his national pride, the one privilege of which he can never be robbed, the one exercise of the mind that no worship of science or glory in technical skill can ever replace or sufficiently substitute.

Shakespeare followers, like myself, are being confronted continually with the problem—Is it better to have our national poet-playwright misinterpreted, badly acted or badly produced than to have no stage Shakespeare at all?

Why not confine our pleasure in him to the study or the fireside?

My answer to that is, as they say in the North of England, "Owt's better than nowt," that Shakespeare himself, as a practising actor and working man in the theatre

vulgarity—free from the commonplace—national and with uplift.

My first impressions are in the main confirmed by a second visit. But Helpmann has greatly improved. His voice is stronger, his interpretation more moving, his

New Books

The Brave Story of Malta

By MONICA DICKENS

GRACE UNDER MALTA. By Sybil Dobbie. (Lindsay Drummond, 7s. 6d.)

"WHY, now it is indeed an honour to be Maltese!"

Thus the Governor's daughter heard a Maltese boy, practising his English, express his pride at the award of the George Cross to the most-bombed island of the war.

The medal was never struck, though, that could pay fitting tribute to the way in which Malta withstood the vicious siege of he Luftwaffe for nearly two years.

The eyes of the world were on her, although she didn't know it, but it is only now that these first-hand accounts begin to reach us that we realise just what Malta did go through.

We've had many accounts of Malta's ordeal, but this book is by Governor Dobbie's daughter. She was there all through the darkest hours of siege, when added to the raids was the constant fear of invasion.

When seventeen Italian E-boats attacked the Grand Harbour, Malta opened up with every possible and impossible gun within range and sank every one of the invaders. The islanders' confidence, never noticeably weak, was redoubled by this proof of the efficiency of their coast defences.

ALTHOUGH Malta had lost its peace-time rôle as a naval base she saved the life of two famous ships.

The Illustrious and the Penelope both limped in there after Mediterranean battles, drew the fire of every available German plane on to the harbour, and sailed forth again triumphantly, thanks to the skill and speed of Malta's dockyard workmen. Valetta was completely wrecked, but the Navy had its ships back.

The photographs show Miss Dobbie as a charming looking girl, and she certainly is a charming writer.

CHILD OF MY SORROW. By Neil Bell. (Collins, 10s. 6d.)

AT the risk of displaying ignorance, I ask: Was there ever a Benjamin Holdernesse, alias Captain Rayleigh, alias Count d'Artois, who lived a swashbuckling, three bottle, duelling, card-playing for women existence in the early 1800s?

In spite of his incredible career, which embraced wrestling with bears and getting hanged at Newgate, Mr. Bell makes his six-foot-three hero as credible as any figure of that fantastic period and gives him personal contacts with Napolean, Wellington, Shelley, Byron and Keats.

Anyway, real or not, his story makes a colourful and intensely exciting book, and if nobody snaps it up for an all-colour, rip-roaring Errol Flynn vehicle for showing men's calves in silken hose and proud beauties in low-cut dresses, the film magnates don't know their job.

The eyes of the world were on her, although she didn't know it, but it is only now that these first-hand accounts begin to reach us that we realise just what Malta did go through.

We've had many accounts of Malta's ordeal, but this book is by Governor Dobbie's daughter. She was there all through the darkest hours of siege, when added to the raids was the constant fear of invasion.

When seventeen Italian E-boats attacked the Grand Harbour, Malta opened up with every possible and impossible gun within range and sank every one of the invaders. The islanders' confidence, never noticeably weak, was redoubled by this proof of the efficiency of their coast defences.

ALTHOUGH Malta had lost its peace-time rôle as a naval base she saved the life of two famous ships.

The Illustrious and the Penelope both limped in there after Mediterranean battles, drew the fire of every available German plane on to the harbour, and sailed forth again triumphantly, thanks to the skill and speed of Malta's dockyard workmen. Valetta was completely wrecked, but the Navy had its ships back.

The photographs show Miss Dobbie as a charming looking girl, and she certainly is a charming writer.

CHILD OF MY SORROW. By Neil Bell. (Collins, 10s. 6d.)

AT the risk of displaying ignorance, I ask: Was there ever a Benjamin Holdernesse, alias Captain Rayleigh, alias Count d'Artois, who lived a swashbuckling, three bottle, duelling, card-playing for women existence in the early 1800s?

In spite of his incredible career, which embraced wrestling with bears and getting hanged at Newgate, Mr. Bell makes his six-foot-three hero as credible as any figure of that fantastic period and gives him personal contacts with Napolean, Wellington, Shelley, Byron and Keats.

Anyway, real or not, his story makes a colourful and intensely exciting book, and if nobody snaps it up for an all-colour, rip-roaring Errol Flynn vehicle for showing men's calves in silken hose and proud beauties in low-cut dresses, the film magnates don't know their job.

... experiment to be recaptioned "Twilight On Sunday."

Yours sincerely,

Jonah Barrington.

Best For This Week: Henry Oscar in "Michael Starr Investigates" (Monday at 8), Glasgow Orpheus Choir (Tuesday, 9.40), Salute to the Red Army (Wednesday, 4), "Home is on the Air"—an explanation of next week's programme change-over (Saturday, 8).

BRIGHTER, gayer, and more stinging, too. Hermione Gingold certainly uses every opportunity to indulge her acid wit, with Henry Kendall—if slightly more subdued—ably following her lead.

RICHARD III (Scala).

A MADLY ambitious and revengeful King played by Donald Wolfit is the centrepiece of a blood-stained production designed to terrify and show the "hunchbacked toad" at his vilest.

ZERO HOUR. (Q Theatre.)

WAR thriller produced and acted in by Dennis Arundell.

... age, there's a German agent with a monocle, there's love, there's everything. A thriller without a fault, ladies and gentlemen, and British, too.

You'll discover Raymond Lovell behind the eye-glass, Carla Lehmann behind the lines, and James Mason behind pretty well everything that goes on.

Good-bye, Mr. Chips

At the Empire.

RE-ISSUE of an old favourite. It is, of course, the best thing Robert Donat has ever done. Greer Garson is in it, too.

... actors can be, how easy it is adversely to affect the play by injudicious production methods.

Were it possible to bring the poet to life again he would, I am sure, say, "Let my plays be acted. I don't mind if you fall down on them. But do your best with them. Be experimental. Be courageous. Explore all their possibilities. But don't blame me if the audiences won't come to see them when you and not my work are responsible for their failure."

Revue artists may ridicule Helpmann and his Hamlet. He remains—a serious, honest, praiseworthy attempt to do something free from ...

He can never overcome his physical handicap, his slightness of figure, nor in such a production as this will he ever survive the faulty direction and the imposition of so crazy and eccentric a piece of stage carpentry. Even Bel Geddes could not have invented worse. Hamlet may not have been mad. The scenery certainly was.

My objections to the producers' work may be summarised.

The tragedy took the lines of a too rapidly acted melodrama. It showed little psychological aim. It has only one "set" throughout, changed slightly, except for lighting effects. The set cramps all active movement.

Action Limited

ACTION is confined and limited through the intrusion of heavy built-up pieces on each side of the stage. There is a gigantic overpowering pillar and an equally overwhelming, winding staircase.

In and around this mass of carpentry the actors have to cluster, huddle and jostle, making pretty groups or stagy postures. The lighting is execrable. With evidently some notion of obtaining the effect of a Flemish painter's masterpiece, the prevailing gloom is richly shot with occasional shafts of light.

Seldom can we see properly the expression on the actors' faces. The lines are frequently spoken too casually, too colloquially.

The ancient Danish Court is banished by the tones of the modern drawing-room. Textual rhythm and beauty are at a discount.

Exits and entrances are clumsy. Seldom is one scene finished off neatly before it is intruded upon prematurely by the next one.

Actors cut into other actors' words, the crowds over-act individually and collectively, interrupt the speech and the action of the principals, and there is an intolerable number of noises off.

They come, moreover, from inappropriate places at inappropriate moments. The ghost's voice clearly comes from back stage, not "in the cellarage."

As one who has, either as playgoer or critic, seen over a hundred different Hamlets, men and women from Irving onwards, here are a few questions I would like answered.

Why do the producers in this production make Hamlet turn his back on the ghost when ejaculating: "Angels and ministers of grace defend us"?

On a Pulpit

WHAT is the advantage of putting Hamlet, his friends and the ghost on a sort of combination pulpit, an ornamental balcony platform, so small that they appear on it in unconvincing proximity?

Why drop curious pantomime transformation cloths with strange stalactite projections, in front of which Hamlet and the ghost must discourse whilst the audience awaits the entrance of Demon Rat.

Why must the players leave their baskets, properties, costumes, &c., strewn about the stage after the play scene? Is it to provide Hamlet with a stage drum and crown upon which he can do trick stage business?

From what machine-made melodrama comes the idea of making all the courtiers after the death of Polonius one by one chase Hamlet, confront him with their drawn swords, popping out unexpectedly in sequence upon him from each dark corner? Or is this effect taken from a grand opera, and would it not be better played to music?

Is there any need for so much

Continued in next column

WHERE THE TREASURE IS. By **Helen Beauclerk.** (Gollancz. 8s. 6d.)

A DISTURBING novel of youthful and maturer love. Disturbing, because of its author's deep penetration into the minds of her characters.

They are introspective, complicated people, and in laying bare their problems and inner hopes and weaknesses she lays bare our own, and shows us ourselves, stripped of the façade we put up to deceive the world.

MOODS

"WE are happy, we are sad,
We are vagrant, we are bad,
We are loving, we are cold,
We are fretting, we are bold.

✦

For we play a tune we find
On the instrument of mind
Where the resonance is wrought
That we're but a state of thought."

MARY GALLATI

HAMLET—Continued from the previous column.

tricky, far-fetched business to implement the dialogue?

Why, in the face of Shakespeare's stage directions for their exit, introduce Fortinbras and the banner carriers of his invading army, to group them silent and motionless on the pulpit platform stairs?

Is Hamlet, who stares at the warriors while he soliloquises, supposed to see them in his mind's eye?

Why do the crowd, during the struggle between Hamlet and Laertes, behave like combatants in a football scrum?

Why must Hamlet always gravitate towards the dominant, semi-central pillar whenever he is called on to soliloquise? Is there some subtle connection between pillars and soliloquys we have failed to grasp?

Fine Acting

DON'T imagine that the whole thing is just fatuous. There is some fine acting, much ingenuity, much cleverness. Five admirably Shakespearean performances are given in this latest New Theatre Hamlet, those of Basil Sydney, Lawrence Hanray, Charles Deane, Dennis Price and Charles Hickman, while Helpmann himself is dramatically effective, passionate and articulate.

In putting my criticism into question form I am not scoffing at an obviously well-intentioned Shakespearean effort, but just out to prove how necessary it is to be fair to our national dramatist by a simpler, less artificial, and more thoughtful presentation of his plays.

I deny fiercely the claim that producers can do as they please with the plays or that speed to-day is the great essential for the theatre. I ask in Hamlet for exposition of intent, for psychology, for high tragic emotion, a sense of romance for poetry, of rhythm, and at least audibility and visibility.

Hamlet is a universal character and rests in the eye and mind of the beholder. There has never been a Hamlet so bad that some critic or another has not described him as "the best Hamlet" he has ever seen.

I could, if space permitted, dilate upon all the Hamlets of the past, make comparisons especially between this latest New Theatre Hamlet and the most successful and finest Hamlet of our time—that of John Gielgud, who played it to a record run, also at the New. But it would be unfair to do so. The rest must be silence.

BRIGHTER, gayer, and more stinging, too. Hermione Gingold certainly uses every opportunity to indulge her acid wit, with Henry Kendall—if slightly more subdued—ably following her lead.

The Greatest piece of Literature out of Occupied Europe

"The Sunday Chronicle" begins exclusively to-day the first instalment of "Put Out the Light," the English title given to the translation of "Le Silence de la Mer," by Vercors, which will be published by Macmillan and Company in May.

Smuggled out of Occupied Europe, it is the story of a French family whose war of silence broke the spirit of a German officer billeted on them.

Put Out the Light

"IT is exquisitely written . . . It has a spiritual depth which I don't think is being produced by countries which are not occupied." . . .

So said a member of the Brains Trust in tribute to "Put Out the Light."

The Hun entered . . . they treated him as if he were a ghost

THERE was a great display of military preparations before he arrived.

First came two troopers, both very fair; one thin and gangling, the other squarely built, with the hands of a quarryman. They looked at my house without going in.

Later an N.C.O. arrived and the gangling trooper went with him. They spoke to me in what they thought was French, but I didn't understand a word. However, I showed them the unoccupied rooms and they seemed satisfied.

Next morning an enormous grey army touring car drove into my garden.

The driver and a slim, fair-haired, smiling young soldier extricated two packing cases from it, plus a large bundle wrapped up in grey cloth. They took the whole lot up to the largest room.

For two days nothing more happened. Then, on the morning of the third day, the big touring-car returned.

The smiling young man heaved a large officer's field trunk on his shoulder and carried it up to the room. Then he took his kitbag, which he put in the room next door. He came downstairs and, speaking in good French to my niece, asked her for some sheets.

She Just Stared

IT was my niece who went to open the door when we heard a knock.

She had just brought me my coffee, as she did every evening (coffee helps me to sleep), and I was sitting at the back of the room in comparative darkness.

It was night, but not very cold; all that November it was never very cold. I could see a massive figure, a flat cap, a mackintosh thrown round the shoulders like a cape.

My niece had opened the door and was waiting in silence. She had pulled the door right back to the wall and was standing up against the wall staring blankly in front of her. For my part, I was drinking my coffee in little sips.

"If you please," said the officer in the doorway. He gave a little nod of greeting and seemed to be gauging the depth of the silence. Then he came in.

He slid the cape on to his arm, gave a military salute, and took off his cap, then he turned to my niece and, with a quiet smile, made her a very slight bow. Then he faced me and made me a deeper bow.

"My name," he said, "is Werner von Ebrennac." I had time for a quick thought to cross my mind: That's not a German name; perhaps he is descended from a Protestant émigré. Then he added, "I am extremely sorry."

Silence Unbroken

THE last word, which he drawled slightly, fell into the silence. My niece had closed the door and was still leaning against the wall looking straight in front of her. I hadn't got up. Slowly I put down my empty cup on the harmonium and waited.

The officer went on. "It had to be done, of course. I would have avoided it if I could. I am sure my orderly will do his best not to disturb you."

He was standing in the middle of the room, huge and very thin; he could easily touch the beams by raising his arm. His head was hanging forward a little, as if his neck didn't grow out from his shoulders but from the top of his chest.

He wasn't round shouldered, but it looked as if he was. His narrow shoulders and hips were most striking, and his face was handsome; it was very masculine and there were two big hollows in his cheeks.

I couldn't see his eyes, which were hidden in the shadow of his brow, but they seemed light-coloured; his hair was fair and smooth, it was brushed back straight and gave out a silky gleam under the chandelier.

The silence was unbroken, it grew denser and denser like the morning mist; it was thick and motionless. The immobility of my niece, and for that matter my own, made it even heavier, and seemed to turn it to lead.

Taken aback, the officer stood without moving till at last I saw the beginning of a smile on his lips. His smile was serious and without a trace of irony.

With his hand he made a vague gesture whose meaning I did not grasp, and fixed his eyes on my niece, still standing there stiffly, so that I was free to study his strong profile, his thin and prominent nose.

I saw a gold tooth shining between his half-closed lips. He turned his eyes away at last, stared at the fire on the hearth, and said, "I feel a very deep respect for people who love their country."

Then he raised his head abruptly and looked at the carved angel over the window. "I could go up to my room now," he said, "but I do not know the way."

My niece opened the door which gives on to the back staircase, and, without looking at the officer, began to climb the steps, just as if she had been alone. The officer followed her, and it was then I noticed that he was lame in one leg.

I heard them cross the landing; the German's steps, one heavy, then one light, echoed down the corridor. A door opened and closed again; then my niece came back.

She picked up her cup and went on drinking her coffee. I lit my pipe and for a few minutes neither of us spoke; then I said, "Thank the Lord he looks fairly well-behaved."

My niece shrugged her shoulders.

She took my velvet jacket on her lap and finished the piece of invisible mending which she had begun.

Next morning the officer came down while we were having breakfast in the kitchen.

He stopped in the doorway and said, "I have had a very good night. I should hope yours was as good as mine." He looked, with a smile, round the huge room.

I had repainted it, and we had brought in some furniture, some copper pans and old plates, so as to shut ourselves in there for the winter.

All that he took in, and we caught the gleam of the edge of his very white teeth. I saw that his eyes were not blue, as I had thought, but a golden brown.

At last he crossed the room and opened the door on to the garden. He took a couple of steps and turned back to inspect our long, low house with its ancient brown tiles and its covering of creepers. His smile broadened.

"Your old mayor told me I was to stay at the château," he said, pointing with a backward flick of his hand at the pretentious building which could be seen a little higher up the hill, through the bare trees. "I shall congratulate my men on their mistake. Here it is a much more beautiful château."

Then he closed the door, saluted

and my room is very chilly. I will warm myself at your fire for a few minutes."

With some difficulty he crouched down by the hearth, put out his hands and kept on turning them round. "That's fine," he said, and moved round to warm his back at the fire, still squatting and clasping one knee in his hands.

"Here it's nothing," he said. "Winter in France is a mild season. Where I come from it's very hard. Very. The trees are all firs, close-packed forests with the snow heavy on them. Here the trees are delicate and the snow on them is like lace.

"The country round my home reminds me of a powerful thick-set bull which needs all its strength to keep alive. Here everything is intelligence, and subtle poetic thought."

His voice was rather colourless with very little resonance, and his accent was fairly slight, only noticeable on the harsher conso-

something to hurt you. But I was saying what I think, and with sincere good feeling.

"I feel it because of my love for France. Great things will come of it for Germany, and for France. I think, as my father did, that the sun is going to shine over Europe."

He took a couple of steps and bowed slightly. As on every evening he said, "I wish you a very good night." Then he went away.

I finished my pipe in silence, then I gave a little cough and said, "It's perhaps too unkind to refuse him even the least mite of an answer."

My niece lifted her head. She raised her eyebrows very high and her eyes were shining with indignation. I almost felt myself starting to blush.

Another long instalment of "Put Out the Light" will appear in next Sunday's "Sunday Chronicle."

The Bishop is Wrong Again

by H. W. SEAMAN

The Bishop of Chichester

TWICE in a few days the Bishop of Chichester, moved by charitable senti- ments, has called for a less rigorous prosecution of the war against Germany.

In the House of Lords he has asked for an abatement of the bombing of Berlin—"one of the great art centres of the world."

He now follows this, in a pamphlet entitled "Germany and the Hitlerite State," to be published by Gollancz to-morrow at 6d., with an appeal for discrimination between the Hitlerites and the German people.

After all we have seen and endured, he asks us to believe that people who willingly choose guns for butter, cheered when their armies trampled on Europe, and became drunk with joy when their aeroplanes bombed Britain, may now be enlisted as our allies in defeating Hitler and bringing peace and order to Europe.

Short of laying down our arms, I can conceive no surer way of losing the war than following the Bishop's advice.

For it springs from precisely the same sort of thinking and feeling that lost us the peace, laid us and Europe open to the German attack, and persuaded the Germans that their great chance had come.

NOBODY in Germany be- lieved that war could be prevented or won with ferocious violence. It is aston- ishing that with the lessons of more than four years behind us a Bishop can still deplore our violence and regard Germany as "a sick patient," who apparently can be cured by kindness.

He revives the ancient myth of a Germany suffering under the harshness of the Versailles Treaty.

One would think, reading this pamphlet, that British and French aggression, not French and British weakness, sentimentality and lack of foresight, encouraged the Germans to try again.

It must be cheering news to the Germans that such notions persist in certain quarters here. Already Goebbels has made use of the anti-bombing appeals, and this booklet offers him new pickings.

With all due regard for what the Bishop says about Christian oppo- sition to the Nazis inside Germany, there is as yet no sign that the German people have begun to re- nounce the devil and his works.

When they do, it will be because they have come to realise that the devil, having promised them all the kingdoms of the earth, has been unable to deliver the goods.

If they hang Hitler before we can get at him, it will not be because they are truly penitent, but because he has let them down. And the only clear sign of his failure that is at present visible to them is in the ruins of their cities.

Among Christian leaders, the Bishop of Chichester is almost alone in his non-militant Chris- tianity. Others have not forgotten that the money changers were whipped out of the temple and that Peter wore his sword in Gethsemane.

One clergyman, in a letter to the "Daily Telegraph," has pointed out that the bombing of Germany is the one alternative to something infinitely worse—the destruction of every city, town and village in Occupied Europe.

All Occupied Europe is a hostage to be ransomed at a great price, or to be destroyed. It is the re- vealed strategy of the German Army to fight always on foreign soil, presenting every Allied com- mander on every front with the alternative which our army faced at Monte Cassino.

So it would be with Paris and all the other towns in France, as it has been with Kharkov and Kiev and Smolensk. And the only way to upset this strategy and save Paris and the rest of Occupied Europe is to destroy, in Germany itself, the enemy's power to make war.

But this means violence which the Bishop of Chichester specific- ally deprecates. He argues that we should search for those elements in Germany which have resisted the Hitlerite menace and main- tained their integrity.

ANY such attempt, if it made any impression at all, would give heart to those very people who may now be beginning to lose faith in German victory.

To rely on the goodwill of such people, now or later, would be the height of folly. If it is forthcoming later, good. Meanwhile, with the war approaching its fiercest phase, any waiting, temporising, or pull- ing punches means losing precious advantages and postponing the decision.

We must give the Germans nothing, word or deed, that they can capitalise. And when the Bishop asks us to offer the Ger- mans a stake in the peace and a hope for their future, we are en- titled to demand first that they show us an humble and a contrite heart, and prove its worth by Christian acts.

As yet there has not been a ghost of a sign of contrition.

COMPANY MEETING

us through the window-pane and disappeared.

That evening he came back at the same time as before. We were having our coffee. He knocked but didn't wait for my niece to open the door; he opened it himself.

Like a Ghost

"I AM afraid I am disturbing you," he said. "If you would rather, I will come in through the kitchen, then you can keep this door locked."

He crossed the room and stopped a moment with his hand on the door-knob, looking into the various corners of the smoking-room. Then he made a slight bow.

"I wish you a very good night," he said, and went out.

We never locked the door. By a tacit agreement, my niece and I had decided to make no changes in our life, even in the smallest detail, just as if the officer didn't exist, as if he had been a ghost.

But it's possible that another sentiment was included in this resolve: I can't hurt anyone's feelings, even an enemy's, without suffering myself.

For a long time, for more than a month in fact, the same scene took place every day.

The officer knocked and came in. He said a few words about the weather, the temperature, or some other equally unimportant subject: all that these remarks had in common was that they did not call for an answer.

He always lingered for a moment on the threshold of the little door and looked round him. A ghost of a smile would betray the pleasure which he seemed to get from this examination—the same examination every day, and the same pleasure.

His eyes would rest on the bowed profile of my niece, invariably severe and impassive, and when at last he took his eyes off her I was sure I could read in them a kind of smiling approval. Then he would say with a bow as he left, "I wish you a very good night."

Abrupt Change

ONE evening everything changed abruptly. Outside a fine snow mixed with rain was falling, terribly cold and penetrating.

On the hearth I was burning the heavy logs which I kept especially for nights like this. In spite of myself I kept imagining the officer outside, and how he would be powdered with snow when he came in.

But he never came. It was much later than his usual time, and it annoyed me to realise how my thoughts were taken up with him. My niece was knitting slowly, with a concentrated air.

At last we heard steps, but they came from inside the house. I recognised the unequal tread of the officer, and I realised that he had come in by the other door and was now on his way from his room. No doubt he hadn't wanted to appear before us in a wet uniform and looking unimpressive; so he had changed first.

The steps, a heavy one, then a light one, came down the staircase. The door opened and there was the officer.

He was in mufti, and was wearing a pair of thick grey flannel trousers and a steel-blue tweed coat with a warm brown check. It was large and loose-fitting and hung with easy carelessness. Beneath the coat a cream woollen pullover fitted tightly over his spare and muscular body.

"Excuse me," he said. "I'm feeling cold. I got wet through

nants. The general effect was of a kind of droning sing-song.

He got up and rested his arm on the top of the high chimney-piece, leaning his forehead on the back of his hand.

He was so tall that he had to stoop a little, whereas I wouldn't even have caught the top of my head there. For a long time he remained without moving or saying anything.

My niece went on knitting with machine-like energy, and did not once look up. I was smoking, half stretched out in my large and comfortable chair.

I imagined that nothing could disturb the weight of our silence, that the man would bid us good-night and go. But the muffled, solemn sing-song began again; one couldn't say that it broke the silence, for it seemed to be born out of it.

"I have always loved France," said the officer, without moving. "Always. I was only a child in the last war, and what I thought then doesn't count. But ever since I have always loved it—only it was from a distance, like La Princesse Lointaine." He paused before saying gravely, "Because of my father."

Always Remote

HE turned round, his hands in his coat-pockets, and leant against the side of the chimney-piece; he kept bumping his head a little against the shelf.

From time to time he rubbed the back of his head against it slowly, with a natural movement, like a stag's. An armchair was there for him just at hand, but he didn't sit down. Right up to the last day he never sat down.

We never gave him, nor did he ever take, anything remotely like an opening for familiarity.

"Because of my father," he repeated. "He was intensely patriotic. The defeat was a great blow to him. And yet he loved France.

"He liked Briand, he believed in the Weimar Republic and in Briand, and he was very enthusiastic. He used to say: 'He is going to unite us like husband and wife.' He thought the sun was going to rise over Europe at last."

While he was talking he watched my niece. He did not look at her as a man looks at a woman, but as he looks at a statue. And that was exactly what she was, a living one, but a statue all the same.

"But Briand was defeated. My father saw that France was still led by your heartless *grands bourgeois*—by people like your de Wendels, your Henry Bordeaux, and your old Marshal.

"He said to me: 'You must never go to France till you can go there in field-boots and a helmet.' I had to promise him that, for he was nearly dying, and so when war broke out I knew the whole of Europe except France."

He smiled, and said (as if that had been a reason): "You see, I am a musician."

A log fell in, and some embers rolled out from the hearth. The German leant over and picked up the embers with the tongs; then he went on:

"I am not a performer. I am a composer. That is my whole life and so it's comical for me to see myself as a man of war. And yet I don't regret this war. No. I think that great things will come of it."

He straightened himself, took his hands out of his pockets and half raised them.

"Forgive me: I may have said

us through the window-pane and disappeared.

HENRY MEADOWS

Mr. W. Wilson Hamill's Statement

The 24th ordinary general meeting of Henry Meadows, Limited, was held yesterday at Wolverhampton.

The following is an extract from the statement of the chairman and managing-director, Mr. W. Wilson Hamill, circulated with the report and accounts:

There has been a considerable reduction in the gross trading profit which stands at £193,342. This is due to the fact that we are more than ordinarily affected by the reductions which the Supply Ministries have made in our profit rates by the application of a formula which arbitrarily computes profits on turnover in relation to capital employed, with the result that the whole of the benefits accruing from our continued efforts in every direction to effect economical production and increased output are passed on to the Country, a circumstance which would in most quarters have ready acceptance provided that some small portion of the saving effected was permitted to be retained. In every sphere of endeavour it is only reasonable to expect some measure of reward for continued and intensive effort.

I feel that the time is rapidly approaching when a clear indication should be forthcoming of the Government's intentions as to the nature and extent of the already promised assistance to re-establish industry on a competitive and financially sound basis.

Development is in the main the result of research, and I find recently much stress has been laid on a more vigorous research policy for industry. The present emergency has not necessarily extended the field of application of the internal combustion engine, but it has certainly increased the possible varieties of application and added to the relative merits of the two main types.

PETROL ENGINE'S FUTURE

My observations lead me to the view that the petrol engine has no less scope for post-war trade than the diesel engine; that the design and manufacturing technique for either is by no means exhausted; and that much perfecting is still possible for the many transmission problems.

On the other hand, whilst purely scientific research should proceed with increased intensity, let there be not only research, but re-search of the causes and effects of the failures and successes during four years onerous war service conditions, and then segregate, co-relate, and apply in line with tradition standards and policy as represented by individual proprietary products.

As makers of diesel and petrol engines we do not attach too much importance to their respective merits as power generators but rather fix their potentialities in line with availability of fuel supplies in the various home and overseas markets. This, together with the adaptability and suitability of the features of each type, will decide the choice.

The Management has consistently directed its endeavours to the improvement of the Company's manufactures, in design, workmanship and efficient production, and faces the future with confidence that the good name for high class products which has been so assiduously cultivated throughout the Company's history will be further enhanced and become an increasingly valuable asset in the post-war period.

The report and accounts were adopted.

ROYAL FAMILY AT WEMBLEY

80,000 See England Rout Scots

Soccer Thrills for the Princess

By THOMAS MOULT

EIGHTY THOUSAND spectators began an exhilarating afternoon at Wembley Stadium yesterday by greeting the King and Queen and Princess Elizabeth—and then they went on to greet another victory for England—6—2.

Once the winners found their stride there was not the ghost of a chance for Scotland. The King of Norway was also there, as were many other famous people, including General Montgomery and members of the Cabinet.

To-day and to-morrow, thousands of yesterday's spectators will go back to their jobs with a great subject for argument. Is Stanley Matthews as marvellous as he sometimes seems?

The answer is that if he plays as he did in the second half, using his superb trickery for his fellow forwards alone and centring at the vital instant, there are few outside-rights to compare with him. But his play in the first half made us think very kindly of old Joe Hulme.

Honours Even

Because few of the much-boosted England side got into their stride until half the match was over the opening was not anything like so uneven as those who remembered England's 8—0 walkover at Manchester a little while ago might have expected. Scotland, indeed, were as good as their masters, and although Hagan scored the first goal for England ten minutes from the interval Dodds found it easy to equalise four minutes later.

Scotland were brawny and brainy until the change-over, but afterwards they went to pieces. Their defence scattered badly when it became necessary to weigh on Matthews, and Caskie, the bright little individualist in their attack, was heavily shaken soon after the change-over and consequently never the same again.

Lawton Seizes Chance

Soon after the restart a grand dribble by Matthews gave Lawton his chance, and he took it with a cracker from 20 yards. The question for the crowd had become disappointingly simple. How many would England score? They added three to Scotland's one. Hagen smartly met a centre from Smith at the 27th minute and Crozier was helpless again. Next minute Mercer dashed up and headed a fifth.

Crozier did his best, but he was just as helpless when seven minutes from the end Carter volleyed a corner from Smith and passed him beautifully.

Dodds then added Scotland's second goal and a good, hard, but never outstanding game was over.

THE King and Queen, with Princess Elizabeth and General Montgomery, were among the thousands of visitors at Wembley Stadium yesterday watching the England versus Scotland Soccer International. They saw England win by six goals to two.

Blazing Ship Sails 1,000 Miles Home

WHILE the crew fought a ceaseless battle with blazing cargo, a 29-years-old second mate brought a bombed merchant ship, M.V. Delius, a 1,000 nightmare miles to port.

This officer, now chief officer Gordon Marshall, of Windsor-gardens, Anlaby, took command after a glider bomb killed the captain during a convoy battle a 1,000 miles out in the Atlantic which raged on at intervals for four days and three nights.

The first officer had died during the voyage.

When the ship eventually arrived in port, she was still burning and burnt for ten days afterwards.

DUNKIRK ORDER TO EVACUATE

THE Germans are preparing for Dunkirk to become a battlefield again. Vichy radio announced last night that the evacuation of certain places on the coastal district of the Nord Department has started.

"All persons whose presence is not indispensable must leave. The Prefect-Delegate of the Nord, accompanied by the Regional Delegate of National Relief, has gone to Dunkirk to supervise the execution of the order," the radio said.—Reuter.

More Refugees

Algiers Radio reports that another contingent of Yugoslav refugees has arrived in the Middle East. They are mostly women, children, aged and infirm, many of whom have relatives fighting with the partisans.

ARSENAL NOT TRAPPED

LUTON'S defenders failed yesterday to lure the Arsenal's quick-moving attack into the off-side trap.

Even when they gave up this forlorn hope they persisted in leaving gaps in the middle, creating a paradise for men like Drake.

The old Arsenal player, Hapgood, who captained Luton usually had the measure of outside-right Cumner. Arsenal's defence, strengthened by the return of Leslie Compton, covered one another well.

Fox, a new guest player from Swansea, introduced as Luton's outside-right, began well but, like his colleagues, faded out of the game in the second half. Denis Compton and Drake took advantage of the "wide open spaces in the middle" to score two goals each in the first half.

Goodyear reduced the lead, but within two minutes Drake scored twice. Drake also got the fifth, completed his hat trick ten minutes after half time, and scored the sixth 15 minutes later. Denis Compton added the seventh three minutes before time.

Sunday Quiz

HERE is to-day's list of teasers:—

1. What was Nelson's rank at the Battle of Trafalgar?
2. Who is the First Lord of the Treasury?
3. What regiment is known as "The Bloody Eleventh"?
4. Who was Mumtaz Mahal?
5. What is meant by a Creole?
6. What famous English poets made their home in Italy?
7. Alexander the Great, Alexander Woolcott, Alexander Herd. Who were these men?
8. If you saw a Rugby football team called the Old Blues, would they be old University players?
9. Name three varieties of apple that are called pippin.
10. When does a British General salute a private?

THE ANSWERS

1. Vice Admiral. 2. The Prime Minister. 3. The Devons. 4. Favourite wife of a Mogul Emperor, who built the Taj Mahal in memory of her. 5. A person of white race, born in the West Indies. 6. Shelley, Byron, Savage Landor, Browning. 7. King of Macedon and world conqueror. Witty American writer. Famous golf professional. 8. No: they are the Old Boys of Christ's Hospital. 9. Cox's Orange, Ribston, Newtown. 10. When the private is dead.

ROMMEL IN NORMANDY

Rommel has inspected fortifications in Normandy, during his tour of inspection of the "Atlantic Wall," said the German News Agency last night.—Reuter.

Boxing Board plans Title Eliminators

By NORMAN HURST

THE Boxing Board of Control awoke yesterday from the Rip Van Winkle attitude it has adopted during four and a half years of war and nominated title contenders in three classes—flyweight, bantamweight and featherweight.

Promoters and the boxers' managers have been given until May 31 to arrange the matches, after which the Board will discuss further contests among the winners.

One of the featherweight eliminators has already been fixed up. By a coincidence Petty Officer Ben Duffy and the Welshman, Norman Lewis, were already on the bill at the Queensberry Club on May 8.

This match will be extended to ten or 12 rounds and made at the championship poundage to comply with the eliminating requirements.

Also by coincidence Jim Brady and Al Phillips, matched by the Board, were already paired in an overweight match due at Leicester on March 13.

The third featherweight eliminator will bring together Tommy McGlinchey, the Scot, and George Pook, of Torquay.

Paterson Is In

The bantamweight aspirants include flyweight champion Jackie Paterson, Gus Foran, of Liverpool, Peter Kane and Ronnie Clayton, both also of Liverpool.

Winner of this group will be called to meet the Empire cham-

North Again Goes Short

By GALLIARD

NORTHERN racegoers have a grouse. They have only half as much racing as the South, if you include Newmarket.

In the fixture list for the first half of the season, just published, there are four more blank Saturdays for the north than the south. Yet the northereners have always been more staunch supporters of racing than the southerners.

Aldershot Won in 20 Minutes

ALDERSHOT had their match with Portsmouth won in the first twenty minutes, but matters might have easily gone the other way. Just after the start the ball was put across to Buchanan, who had time to control it, but he blazed away with a first-time shot and put the ball over the stand.

With nine guest players, Aldershot proved themselves the more business-like side and were quicker in everything they did. Their forwards were always alive, making progress with snappy passes, and their half-backs were relentless in their attacking.

Morris gave Aldershot the lead after 15 minutes, when he scored direct with a free-kick taken from about a yard from the side of the penalty area. Powell got the second five minutes later.

DUNKIRK ORDER TO EVACUATE

THE Germans are preparing for Dunkirk to become a battlefield again: Vichy radio announced last night that the evacuation of certain places on the coastal district of the Nord Department has started.

"All persons whose presence is not indispensable must leave. The Prefect-Delegate of the Nord, accompanied by the Regional Delegate of National Relief, has gone to Dunkirk to supervise the execution of the order," the radio said.—Reuter.

THE King and Queen, with Princess Elizabeth and General Montgomery, were among the thousands of visitors at Wembley Stadium yesterday watching the England versus Scotland Soccer International. They saw England win by six goals to two.

More Refugees

Algiers Radio reports that another contingent of Yugoslav refugees has arrived in the Middle East. They are mostly women, children, aged and infirm, many of whom have relatives fighting with the partisans.

ARSENAL NOT TRAPPED

LUTON'S defenders failed yesterday to lure the Arsenal's quick-moving attack into the off-side trap.

Even when they gave up this forlorn hope they persisted in leaving gaps in the middle, creating a paradise for men like Drake.

The old Arsenal player, Hapgood, who captained Luton, usually had the measure of outside-right Cumner. Arsenal's defence, strengthened by the return of Leslie Compton, covered one another well.

Fox, a new guest player from Swansea, introduced as Luton's outside-right, began well but, like his colleagues, faded out of the game in the second half. Denis Compton and Drake took advantage of the "wide open spaces in the middle" to score two goals each in the first half.

Goodyear reduced the lead, but within two minutes Drake scored twice. Drake also got the fifth, completed his hat trick ten minutes after half time, and scored the sixth 15 minutes later. Denis Compton added the seventh three minutes before time.

Aldershot Won in 20 Minutes

ALDERSHOT had their match with Portsmouth won in the first twenty minutes, but matters might have easily gone the other way. Just after the start the ball was put across to Buchanan, who had time to control it, but he blazed away with a first-time shot and put the ball over the stand.

With nine guest players, Aldershot proved themselves the more business-like side and were quicker in everything they did. Their forwards were always alive, making progress with snappy passes, and their half-backs were relentless in their attacking.

Morris gave Aldershot the lead after 15 minutes, when he scored direct with a free-kick taken from about a yard from the side of the penalty area. Powell got the second five minutes later.

...oxing Board plans Title Eliminators

By NORMAN HURST

...HE Boxing Board of Control awoke yesterday from the Rip Van Winkle attitude it has adopted ...ring four and a half years of war and nominated ...le contenders in three classes—flyweight, ban...mweight and featherweight.

Promoters and the boxers' managers have been given until May 31 to arrange the matches, after which the Board will discuss further contests among the winners.

One of the featherweight eliminators has already been fixed up. By a coincidence Petty Officer Ben Duffy and the Welshman, Norman Lewis, were already on the bill at the Queensberry Club on May 8.

This match will be extended to ten or 12 rounds and made at the championship poundage to comply with the eliminating requirements.

Also by coincidence Jim Brady and Al Phillips, matched by the Board, were already paired in an overweight match due at Leicester on March 13.

The third featherweight eliminator will bring together Tommy McGlinchey, the Scot, and George Pook, of Torquay.

Paterson Is In

The bantamweight aspirants include flyweight champion Jackie Paterson, Gus Foran, of Liverpool, Peter Kane and Ronnie Clayton, both also of Liverpool.

Winner of this group will be called to meet the Empire cham-

North Again Goes Short

By GALLIARD

NORTHERN racegoers have a grouse. They have only half as much racing as the South, if you include Newmarket.

In the fixture list for the first half of the season, just published, there are four more blank Saturdays for the north than the south. Yet the northerenrs have always been more staunch supporters of racing than the southerners.

BRIGHTON ...... 1 CHARLTON 2

1220

pion, Jim Brady, for the right to challenge Johnny King.

The flyweight list includes a match between Joe Curran and Sammy Reynolds, who met at 8st. not long ago, Reynolds winning on a foul.

Tommy Plowright, of Nottingham, and Norman Lewis, also paired, have already fought three times and on March 28 they are a star attraction at Nottingham. The other contenders are Hugh Cameron, of Scotland, and Bunty Doran, of Ireland.

Special contests between members of the Polish Air Force, the Canadian Army, the Navy, the Army, the R.A.F. and A.B.A. clubs will support a middleweight novices' competition at a tournament arranged by the Printing and Allied Trades A.B.A., at Beckenham Baths on March 18 (2.45 p.m.). The tournament is in aid of the Newspaper Press Fund.

Leopardstown Results

2.45.—Shaun Ogue (J. Brogan, 9-2), 1; Airds Moss (J. Barrett, 5-4, f.), 2; Tayanglet (B. O'Neill, 8-1), 3. **Also:** Whelan, Church Hill, Shirley Lad, Fergus O'Farrell, Rockleigh, More Fun, Miss Franco. **Tote:** Win 10s., places—2s. 6d., 2s. 6d., 4s. Two and a half lengths; half a length. Osborne.

3.15.—Royal Down (M. O'Reilly, 10-1), 1; Shevardagh (T. Hyde, 5-2), 2; Missing Link (V. Mooney, 20-1), 3. **Also:** Agag, Zog, Desert Star, Gentleman John, Romany, Mr Wilts (5-4, f.), Glen of Hawthorn, Uplander, Wild Wheat, Weigh In, Tangius. **Tote:** Win £3 8s.; places—16s., 3s. 6d., £2 3s. 6d. Length and half, one length. Lenehan.

3.45.—King of the Jungle (D. Morgan, 4-1, co-f.), 1; Hydora (B. O'Neill, 4-1, co-f.), 2; Pelorus (C. Sleator, 5-1), 3. **Also:** Mel's Abbey, Footpath, Martin Griffin, Sparkling Hock, Sporran, Dulahorne, Brownstown, Merenptah, Royal Yacht, Dismas, Sea Mist, Staplegrove, Pucka Kumar, Peepshow, Anderson, Numero, Cape Cart, Dr Dick, Royal Bridge, Johnny Pedler. **Tote:** Win 8s.; places—3s. 6d., 3s. 6d., 5s. 6d. One length, three lengths. B. Nugent.

4.15.—Tiverton (D. Morgan, 10-1), 1; Funny (M. Browne, 7-1), 2; Knight's Crest (M. Moloney, 6-1), 3. **Also:** Monk's Mistake (5-4, f.), Golden View II, Kai Lung, Red Wind, Barghora, Hamlet, Exile Warrior, Donohill. **Tote:** Win £1 11s., places—8s., 5s., 4s. Length and half, six lengths. D. Rogers.

4.45.—Slieve Dub (A. Brabazon, 7-1), 1; Yung Yat (D. Morgan, 6-1), 2; Smiling Marcus (J. Brogan, 6-4, f.), 3. **Also:** Milk Bar, Spot Cash, Hillbilly, Arden Loch, African Glen, Land's End, Golden Prince, Coal Queen, Roman Days, Red Quill, Cashier II, Ransboro, Rhodes, Dawn of Victory, Dunmahon, Phil Bland, Happy Home, Largo. **Tote:** Win 17s. 6d.; places—4s. 6d., 4s., 3s. One length; eight lengths. W. Kelly.

5.15.—Sen Toi (Mr. R. Browne, 7-1), 1; Drumbilla (Mr. J. R. Cox, 4-1), 2; Broken Promise (E. Newman, 20-1), 3. **Also:** Slacker, H.M.S. Sturgeon, Sir Sen, Pulcher, Kilstar, Double Flush, Sovereign (9-4, f.), Crickstown. **Tote:** Win 19s.; places—6s., 4s., 11s. 6d. Twelve lengths, three lengths. Browne.

5.40.—African Collection (Mr. J. R. Cox, 5-2), 1; Emerald (Mr. W. Davis, 5-1), 2; Timber (Mr. T. Nugent, 20-1), 3. **Also:** Wings of Song, Bennie's Battle, Knockfennel, Grand Jury, Two Drops, Fergus, Last Battle, Eileen Mary, Ballinacree Lass, Southern Lass, Captain Smith (4-5, f.). **Tote:** Win 5s. 6d.; places—2s. 6d., 3s., 14s. 6d. Neck; 25 lengths. Brabazon.

Tote Double.—£49 1s. 6d. Fifteen tickets.

That small grumble apart, I think everybody will agree that the fixture list is a good one. The circumstances of war transport make it impossible for the Midlands to get a fixture—Nottingham, with its excellent race-track, has been waiting and hoping for more than two years.

Many of the race names are being kept alive, even if in war substitute form, and in strange places.

I recall the enthusiastic crowds at Stockton last season for the Northern Cesarewitch, at Pontefract for the Substitute November Handicap, at Windsor for the Stewards (Cup) Handicap, and at Ascot for the Southern Cambridgeshire and Cesarewitch.

All the classic and semi-classic races will again take place at Newmarket, which stables two of the five classics in normal times. Epsom and Doncaster are not available.

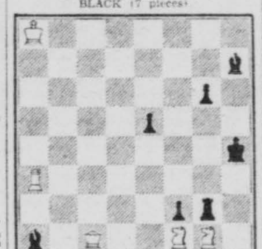
The result of Crossword No. 359 will be published next Sunday.

Children's Crossword on Page 5



CHESS:

Conducted by W. Hatton-Ward

PROBLEM No. 1,079A.

By P. Wenman (Bristol).

BLACK (7 pieces)

WHITE (5 pieces). MATE IN THREE.

Forsyth notation check on diagram: K 7; 7 b; 6 p 1; 4 p 3; 7 k; R 7; 5 p r 1; b 1 Q 2 KT KT 1.

PROBLEM No. 1,079B.

Two-mover, by G. F. Clark, Cleethorpes, Lincs.: White K on KR1, Q on K2, Rs on QKt2 and KKt3, Bs on KKt2 and KR8, Kts on Q6 and KB7, Ps on KR2, QR3, QB3, KB4 (twelve pieces). Black K on QB4, Rs on QKt4 and KB4, Bs on QR3 and KKt8; Kt on QR4, Ps on QKt3 and QKt6 (eight pieces).

In Forsyth notation: 7 B; 5 KT 2; b p 1 KT 4; kt r k 2 r 2; 5 P 2; P p P 3 R 1; 1 R 2 Q 1 B P; 6 b K.

Section A to solve both problems; Section B the two-mover only.

Key to Problem No. 1,078A (four-mover, R. Luke) was Kt—QB3; key to No. 1,078B (three-mover, by B. N. Lewis, the boy composer) was B—Kt2.

For the pocket chess wallet, given by Mr. R. G. Thomson, Aberdeen, a series of games by post is being played by three hospital patients—namely, F. E. Stocking, Ministry of Health Hospital, Chepstow, Mon.; C. P. Coatman, Baguley Sanatorium, near Altrincham, Cheshire; and Max Wilson, St. Ebbs Hospital, Epsom. They will play each other two games. Three points will be awarded for a win with black, two for a win with white.

pion, Jim Brady, for the right to challenge Johnny King.

The flyweight list includes a match between Joe Curran and Sammy Reynolds, who met at 8st. not long ago, Reynolds winning on a foul.

Tommy Plowright, of Nottingham, and Norman Lewis, also paired, have already fought three times and on March 28 they are a star attraction at Nottingham. The other contenders are Hugh Cameron, of Scotland, and Bunty Doran, of Ireland.

Special contests between members of the Polish Air Force, the Canadian Army, the Navy, the Army the R.A.F. and A.B.A. clubs will support a middleweight novices' competition at a tournament arranged by the Printing and Allied Trades A.B.A., at Beckenham Baths on March 18 (2.45 p.m.). The tournament is in aid of the Newspaper Press Fund.

Leopardstown Results

2.45.—Shaun Ogue (J. Brogan, 9-2), 1; Airds Moss (J. Barrett, 5-4, f.), 2; Tayanglet (B. O'Neill, 8-1), 3. **Also:** Whelan, Church Hill, Shirley Lad, Fergus O'Farrell, Rockleigh, More Fun, Miss Franco. **Tote:** Win 10s., places—2s. 6d., 2s. 6d., 4s. Two and a half lengths; half a length. Osborne.

Sturgeon, Sir Sen, Pulcher, Kilstar, Double Flush, Sovereign (9-4, f.), Crickstown. **Tote:** Win 19s.; places—6s., 4s., 11s. 6d. Twelve lengths; three lengths. Browne.

5.40.—African Collection (Mr. J. R. Cox, 5-2), 1; Emerald (Mr. W. Davis, 5-1), 2; Timber (Mr. T. Nugent, 20-1), 3. **Also:** Wings of Song, Bennie's Battle, Knockfennel, Grand Jury, Two Drops, Fergus, Last Battle, Eileen Mary, Ballinacree Lass, Southern Lass, Captain Smith (4-5, f.). **Tote:** Win 5s. 6d.; places—2s. 6d., 3s., 14s. 6d. Neck; 25 lengths. Brabazon.

Tote Double.—£49 1s. 6d. Fifteen tickets.

That small grumble apart, I think everybody will agree that the fixture list is a good one. The circumstances of war transport make it impossible for the Midlands to get a fixture—Nottingham, with its excellent race-track, has been waiting and hoping for more than two years.

Many of the race names are being kept alive, even if in war substitute form, and in strange places.

I recall the enthusiastic crowds, at Stockton last season for the Northern Cesarewitch, at Pontefract for the Substitute November Handicap, at Windsor for the Stewards (Cup) Handicap, and at Ascot for the Southern Cambridgeshire and Cesarewitch.

All the classic and semi-classic races will again take place at Newmarket, which stables two of the five classics in normal times. Epsom and Doncaster are not available.

Another two-way daylight air assault on Nazi Europe

London has fifth raid running

Nine bombers down

NINE raiders were brought down in last night's raid on London and the South-East.

In different parts of the London area—which had its sixth Alert in five nights—watchers saw several planes, in ones and twos, coned by searchlights and pursued by shellbursts.

One bomber swerved suddenly after a shell had burst just underneath it.

Broke in two

A second later the plane, a mass of flame, was seen falling from the sky.

Another plane seemed to break in two and was seen to fall.

Watchers in a Home Counties town saw at least two of the raiders brought down in flames. One fell apparently towards a village.

The second, which appeared to be a large bomber, was caught in a great cone of searchlights. It was set on fire, and crashed in the direction of the coast.

Fireguards cheered

Fire watchers in the streets of a South East market town cheered when they saw this plane—or possibly yet another—burst into flames and fall some distance outside the town, the flames lighting up the countryside.

Eye-witnesses say they saw two airmen bale out.

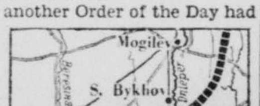
A feature of the raid was a concentration of about 50 flares dropped by German pathfinder planes on one particular corner of London.

Several miles away it was almost as light as day. Guns of all calibre were turned on the flares, and within a short while all were extinguished.

The raiders met with a terrific barrage from all the perimeter defence.

Crowds looked on

The raiders came in over the East, South and South-East Coasts.



Flames from a gas main illuminate the ruins of a building destroyed by a bomb in the raid on London last night

NEW SOVIET DRIVE TAKES ROGACHEV

LAUNCHING a new offensive in White Russia the Red Army forced crossings of the River Dnieper, broke through the defences on a front of 30 miles, advanced 12 to 16 miles and captured by storm the town of Rogachev.

These successes, results of three days' fighting, were announced by Moscow last night in an Order of the Day from Marshal Stalin to Gen. Rokossovsky.

Less than an hour earlier another Order of the Day had announced the capture of Dno, the rail junction 60 miles east of Pskov.

This was the opening of the real battle for Pskov. Dno, its major eastern outpost, was over-

Gotha, Schweinfurt and targets in France and Holland blasted

AMERICAN bombers based on Italy joined the great Allied force sent out from this country yesterday, in another smashing two-way attack on Germany and German-occupied territory.

This was the second co-ordinated air blow in three days.

First announcement of the new assault from this country—the fourth from British bases since Sunday—said that "strong forces" of heavy bombers of the Eighth Air Force were employed.

Aircraft factories hit

It was later disclosed that they were Liberators and Fortresses, which flew a round trip of nearly 1,000 miles to bomb the aircraft factories at Gotha—hit on Sunday—and the ball-bearing factory at Schweinfurt.

Other German targets were also attacked.

Meanwhile, American heavy bombers from Italy again attacked the Daimler factory at Steyr, in Austria—for the second day in succession.

They were escorted by Thunderbolts and Lightnings, and fought through a considerable fighter screen.

Steyr, 95 miles west of Vienna, is the centre of Hitler's aircraft industry in Austria.

The attack from Italy was reported earlier by Berlin radio, which stated that violent air battles took place.

From yesterday's operations from this country 49 bombers of the U.S. Eighth Air Force failed to return.

Ten fighters are missing.

The Allied fighters destroyed 37 enemy planes.

While the great force of U.S. Eighth Air Force bombers were pounding the objectives in Germany, B 26 Marauders of the U.S. Ninth Air Force attacked military objectives in the Pas de Calais and in Holland.

The R.A.F. was there

They were escorted and covered by R.A.F. and Allied fighters.

Earlier in the day R.A.F., Dominion and Allied Bostons, Mitchells and Mosquitoes of the Second Tactical Air Force, escorted and covered by R.A.F. Typhoons, attacked other objectives in Northern France.

Shortly before noon formations of R.A.F. fighters came in over the Straits of Dover from the direction of Northern France.

R.A.F. out in force again last night

LATE last night two more big forces of R.A.F. bombers flew from this country to the Continent.

One force took 45 minutes to cross the East Coast; the other went out over the South-East Coast, a 40-minute stream.

Explosions from the French coast shook windows and doors on the British side.

Berlin long - wave stations went off the air twice, and were still off in the small hours of this morning.

Budapest also shut down.

Rain and mud in the Anzio bridgehead

From VAUGHAN THOMAS (Representing the Combined British Press)

ANZIO BRIDGEHEAD, Thursday.

THE weather is still the main news on the Bridgehead. All yesterday heavy rain and high winds swept our position.

The light, sandy soil around Anzio was quickly churned into sticky mud and trucks splashed axle-deep through the deep pools along the roads.

Behind the screen of rain, the Germans are reorganising safe from the eyes of our Air Force.

Edging forward

The enemy's policy is always to remain active, even during the

ROOSEVELT VETO ON TAX BILL IS REJECTED

From ROBERT WAITHMAN News Chronicle Correspondent

WASHINGTON, Thursday.

CONGRESS appears today to be riding on a wave of exultation over Senator Barkley's resignation in protest against the veto imposed on its Tax Bill by President Roosevelt.

The Senate Democrats accepted Mr. Barkley's resignation, made speeches expressing their unshaken confidence in him, and then unanimously re-elected him as their leader.

Tonight Mr. Barkley notified the President that he was retaining his post at his colleagues' insistence, and said he hoped his resignation and re-election would work toward closer harmony between the White House and Congress.

In the House of Representatives the President's tax veto was triumphantly overridden by a vote of 299 to 95—which was 36 votes more than the required two-thirds majority.

If, as is now expected, the Senate also overrides the veto the Tax Bill, which the President has called a measure to provide relief for the greedy instead of the needy, will become law.

In that way, many members obviously feel, Congress will have reasserted its constitutional rights. The President will have been "put in his place."

But not everyone is rejoicing over this latest and most spectacular cleavage between Mr. Roosevelt and Congress.

Sober views, reflected in editorial columns today—and the newspapers give columns of space to the story—suggest a fairly wide conviction that there have been faults on both sides and that the damage created by the breach should be repaired as quickly as possible.

Senator's sole aim

Mr. Barkley's friends are ready to take the view that his break with the President was dictated solely by a desire to re-establish the rights of Congress and to save what he considered an adequate Tax Bill.

Mr. Harry Woodring, former Secretary for War in the President's Cabinet, who parted company with Mr. Roosevelt and is presently organising a movement within the Democratic Party designed to prevent the President's re-election, claims today that Senator Barkley's "revolt" will increase anti-fourth term sentiment.

But Senator Barkley said today that his action has "nothing to do with" a fourth term.

Ideal President

What the quarrel is all about

By the Diplomatic Correspondent

IN American constitutional practice the President has the right of veto on any Bill.

Bills which have been passed by both Senate and House of Representatives are passed to the President for signature before they can become law. If he exercises his right of veto and refuses to sign they may be brought up again in both Chambers.

If, when it is so brought up, each Chamber passes a Bill by a

1233

dropped on widely scattered districts in the London area. There were some fires.

Many people were unable to resist coming out to watch the amazing sky spectacle over London. Numerous flares hung in the sky, shedding a pale, brilliant light.

Tracer bullets and exploding A.A. shells, and here and there, the bursts of phosphorous incendiary bombs, added to the pyrotechnics of the night. West End crowds watched this display.

Fierce barrage

In one district, where the barrage was fiercer than on Wednesday, windows rattled continuously for minutes at a time under the incessant reverberation.

Searchlights picked up a raider flying in and retained it in their beams for a time. Shells burst around it.

Another raider was caught in a cone of about a dozen searchlights as it approached from the Thames Estuary. It was immediately pummelled by a fierce series of shell bursts, interspersed occasionally by bursts of rocket shells.

Violent evasive action by the plane failed to shake off the fingers of light, and it was pounded by an unceasing concentration of fire.

The Alert ended some time before midnight.

Digging for Wednesday night's victims: Page Three. Gun-site picture: Page Four.

Big Jap losses at Marianas —U.S. Report

From Our Own Correspondent

New York, Thursday.—An American correspondent at Pearl Harbour was permitted to say today that Tuesday's attack on Saipan and Tinian islands in the Mariana Islands by carrier-based planes was believed to have resulted in the wrecking of another considerable portion of the Japanese Fleet.

This correspondent says that the audacious blow at the Marianas re-enacted the American victory at Truk by catching the Japanese cruisers, destroyers, and possibly battleships and carriers, off their guard, and sending many to the bottom.

Allied destroyers have shelled the aerodrome and docks at Kavieng, New Ireland, said communique from Gen. MacArthur's headquarters.

The neighbouring Duke of York Islands were also shelled.

A Japanese warship and two cargo ships were sunk fleeing from the Bismarck Islands.—Reuter.

Thunderbolt's speed: 400 m.p.h.

Washington, Thursday.—The United States Thunderbolt fighter has a speed of over 400 miles an hour, can fly at 40,000ft., has a range of 350 miles and carries eight 50-calibre machine-guns.

These facts were disclosed by the United States War Department tonight, giving hitherto unpublished details of aircraft types.

Here are new facts about other United States planes:

Lightning fighter has a speed of 400 miles an hour, carries one 20mm. cannon and four 50-calibre machine-guns.

Medium Mitchell bomber is equipped with a 75mm. cannon and fourteen 50-calibre machine-guns.

Main bomber types—the Flying Fortress, Liberator, Havoc, Mitchell, Marauder and Ventura—all have a maximum speed of more than 300 miles an hour.

whelmed by two Russian armies in a one-day battle.

Impetuous attack

The Order, addressed to Gen. Govorov, Leningrad Front commander, and Gen. Popov, commander of the Second Baltic Front, said Dno was taken by "an impetuous attack."

Shortly before the Moscow announcement Berlin claimed that Dno had been evacuated in the course of a general withdrawal.

Another commentator said that the Russians were racing to cut off German defenders falling back on Pskov.

Berlin also admitted the abandonment of Rogachev, one of the southern buttresses of the White Russian front which narrowly escaped capture after the fall of Gomel nearly three months ago.

The town was destroyed by artillery fire, said Hammer.

Rogachev had been in German hands since July 11, 1941—19 days after the Germans attacked Russia.

Rogachev lies 14 miles north of Zhlobin. Its loss would open the southern defences of the Orsha-Mogilev-Vitebsk line and place the Russians astride the main highway to Bobruisk and the White Russian capital of Minsk.

Moscow celebrated with two salutes: 12 salvoes from 124 guns for Dno and 12 more for Rogachev.

Bridgehead wiped out

Moscow's night communique stated that the German bridgehead east of the Dneiper at Rogachev had been wiped out.

More than 100 places were captured in the break-through there.

South-west of Lake Ilmen also more than 100 places were taken, in addition to Dno.

North-east of Pskov the drive from Luga made more progress. The villages of Seredkino and Vladimirski Lager were among the places occupied.

South-west of Kholm also, several places were taken.—Reuter and B.U.P.

Russians hid in iron mines

From PAUL WINTERTON
News Chronicle Correspondent

MOSCOW, Thursday.

THE Russians have now had time to report on the situation in and around Krivoi Rog.

From a military point of view it is a great success, but the town is on fire from end to end.

The Germans, before leaving, blew up many of the best buildings—blocks of dwelling houses, the Mining Institute, bakeries, water supplies and power plants.

Great heaps of rubble and twisted metal are all that is left of big factories. All the valuable equipment of the factories and iron mines had been sent to Germany.

14 days underground

The Germans attempted to drive away the civilian population to add to their stock of slaves in Germany, but large numbers of the inhabitants took refuge in the iron mines.

The Germans knew they were hiding there and made one or two attempts to go down, but they were met by shots and came up again.

In the end they tried to seal up the mines with explosives, but they did not make a very good job of it.

When the Red Army arrived it helped to rescue many people who had been underground for 14 days and were at the point of exhaustion.

Seventeen thousand of the inhabitants were shot by the Germans.

Some time before a series of very heavy explosions on the other side shook buildings on the South-East Coast.

Small groups of R.A.F. planes had made sorties across the Straits from daybreak.

Berlin radio spoke of "extensive air battles" over North-Western and Central Germany, when hundreds of German fighters and interceptors attacked the U.S. bomber formations and their fighter escorts entering German territory.

The German News Agency stated: "First reports available indicate that a considerable number of bombers have been shot down on their way to the target."

The huge ball and roller bearing plants at Schweinfurt, which were damaged heavily by Eighth A.A.F. bombers on August 17 and October 15, had been repaired and reconstructed so that at the time they were assaulted yesterday their capacity approximated 40 per cent. of the total supply for the German war machine.

Schweinfurt once produced more than half of all ball and roller bearings available to the Axis. The city is 65 miles east of Frankfurt.

Mosquito attack

The aircraft final assembly and major components plant at Gotha, another of yesterday's targets, ranks next to those at Bernberg, which were largely destroyed by Eighth A.A.F attacks on Sunday and Tuesday, as a producer of twin-engined fighter plants.

Gotha is 65 miles from Kassel.

Yesterday's attacks followed a Mosquito attack—without loss—on Wednesday night on objectives in Western Germany.

Steyr, the Austrian aircraft manufacturing centre was also attacked on Wednesday, by Liberators, it was announced at Allied H.Q., North Africa.

Here is the Americans' record for the past four days, up to yesterday:

Sunday: Factories at Leipzig, Bernburg, Brunswick, Oschersleben and Tutow attacked by the largest force of bombers ever sent over targets in daylight.

Monday: In almost equal strength factories at Brunswick and aircraft parks and depots in North-West and Central Germany.

Labour holding vital talks on the truce

By IAN MACKAY

THE whole question of Labour's future relations with the Government—including the political truce and the position of the Coalition after the war—is to be thrashed out between the Labour Party Executive and the Labour Ministers in the Cabinet at Transport House this week-end.

Mr. Attlee, Mr. Bevin and Mr. Morrison will, I understand, attend the meeting which will last over tomorrow and Sunday.

The Ministers will be asked to "come clean" on the immediate issue of the political truce.

All three parties in the Government are pledged by their leaders to observe the truce. But only the Labour Party is pledged to it by rank and file decision.

Party is restive

As one party official put it to me yesterday: "The Labour Party Conference by democratic vote put us into the National Government, and at each successive conference since has reiterated that decision. Only the Labour Party Conference can pull us out."

The next conference meets in London at Whitsun.

I am informed that the National Executive and the Parliamentary Committee—who will make up the meeting—do not intend to shoot at their leaders in the Government.

They are disturbed, however, by the recent by-election results and the restiveness among Labour people in the constituencies who feel that their Socialist clothes are being stolen by Common Wealth.

Many Labour candidates, too, find it irksome to stand by and watch Labour M.P.s supporting their Tory rivals against an Independent who, in the end, walks off with the seat.

Attlee's pledge

That is the kind of thing the week-end conference will discuss.

The upshot may well be that the by-election truce may be broken while leaving the national unity of the Coalition unbroken.

Such an arrangement might annoy the political bosses in London, but it would probably be acceptable to all parties in the constituencies.

With regard to the continuance of the Coalition after the war, that also will be decided by the Labour rank and file. At last year's conference Mr. Attlee gave a specific pledge that as soon as the war is over there will be a special Labour Party conference summoned to decide the future relations of the party to the Government.

If that conference says "Stay in" the Labour Party will stay in. If it says "Come out" it will come out. And any Minister who stays in will go the way of MacDonald, Snowden and Thomas in 1931.

Mr. PAASIKIVI REPORTS —Says Vichy

THE Finnish Cabinet met in extraordinary session last night, according to Vichy radio, which stated that it was believed Mr. Paasikivi was to report on his mission to Stockholm.

One of the clearest statements yet made by a Finnish statesman on Finland's peace hopes came yesterday from Mr. Vaino Tanner, Finnish Finance Minister and Acting Premier during the recent illness of Professor Linkomies.

He told the Helsinki correspondent of "Stockholms Tidningen," according to the Finnish radio:

"If the peace terms are unacceptable we shall fight on with clenched teeth and await what the future holds in store. If the terms are acceptable we shall accept them immediately."

Leading Finns are reported to be profoundly disturbed by what is understood to be one of the Russian peace terms—that the Finnish Army should join forces with the Red Army in a drive to exterminate the seven German divisions in the northern part of the country.

Carrier planes attack Marshalls

Washington, Thursday.—Carrier-based planes of the U.S. Pacific Fleet have moved back to the Marshall Islands area to smash the remaining resistance there, Admiral Nimitz reported. Three islands were bombed.

100 Axis agents arrested in Chile

From Our Own Correspondent

New York, Thursday.—From an official source it was learned today that the Chilean police have arrested 100 Axis agents in an effort to uproot an espionage organisation said to operate in connection with a similar spy ring in the Argentine which formerly carried on its activities under the aegis of the Reich Embassy.

BARLOW GETS PRIORITY N

By the Political Correspondent

THE Barlow Report on the location of industry is now high on the list of priorities in the Government's examination of reconstruction problems.

I understand that a definite move is to be made at last to formulate a policy on this keystone of all reconstruction plans.

The first step will be to consult industrialists. They will be asked to pool their views on the post-war location of industry so that the Government can be certain of pretty general agreement when it is time to introduce legislation.

It is realised that without a policy for location of industry, plans for road development and other aspects of reconstruction will be held up indefinitely.

Industrialists will be asked for their views on the establishment of estates in areas that may be hard hit after the war of war work.

"The whole German anti-invasion defence system in Holland will be in operation very soon and the evacuation of the coast complete."

and now have, the deepest personal affection for the President," Mr. Barkley told newspapermen. "He stands personally and officially right along with Woodrow Wilson, my ideal of a President for the last generation."

Senator Barkley seems now to be anxious to take the olive branch the President offered yesterday.

comes law, regardless of the Presidential veto.

What President asked

The Tax Bill, which is the present subject of dispute between President and Congress, is a Bill to raise revenue and as such must originate in the House of Representatives (Lower House), though the Senate has the right under the Constitution to propose or concur in amendments.

Originally the President asked Congress to raise 10,500,000,000 dollars (£2,625,000,000) by taxation over and above the existing revenue.

In the Tax Bill as sent to the President Congress slashed the amount to little more than 2,000,000,000 dollars (£500,000,000).

Exercising his right of veto and returning the Bill to Congress without his approval, the President described it as "not a tax Bill, but a tax relief Bill providing relief not for the needy but for the greedy."

World will be short of meat

Col. J. J. Llewellin, Minister of Food, said in Birmingham yesterday: "The war may or may not be over soon, but even if it is I am afraid that our job is going to continue for some time.

"We have to look forward to a time when of certain things we should like to have, in particular meat and dairy products, there is going to be a world shortage of supply. So we have got to go on and make our plans to increase that production."

BARLOW GETS PRIORITY NOW

By the Political Correspondent

THE Barlow Report on the location of industry is now high on the list of priorities in the Government's examination of reconstruction problems.

I understand that a definite move is to be made at last to formulate a policy on this keystone of all reconstruction plans.

The first step will be to consult industrialists. They will be asked to pool their views on the post-war location of industry so that the Government can be certain of pretty general agreement when it is time to introduce legislation.

It is realised that without a policy for location of industry, plans for road development and other aspects of reconstruction will be held up indefinitely.

Industrialists will be asked for their views on the establishment of estates in areas that may be hard hit after the war by the withdrawal of war work.

Special inducements in the way of reduced taxation and rates may be held out to industrialists to set up factories in such areas; or to take over factories in more remote parts of the country not required for the production of munitions.

It is not expected, however, that Government policy will be defined for several months, and it is doubtful whether legislation could be put before Parliament this year.

ENGLISH ELECTRIC

INCREASED PROFIT

The 25th Annual General Meeting of The English Electric Co. Ltd. was held in London yesterday.

Sir George H. Nelson, M.I.Mech.E., M.I.E.E. (Chairman and Managing Director), in the course of his speech said:—The increase of £41,972 in the issued Ordinary Stock is a result of the completion of the exchange of shares with the holders of Ordinary Shares in D. Napier & Son Limited.

Creditors and Reserves are up by £602,427; this is largely due to additions to our Reserves for Taxation, which fully cover all taxation liabilities on the profits up to the date of the Accounts under review.

Our Liquid Assets amount to £2,957,603, which is slightly in excess of last year and is fast approaching the £3,000,000 mark. The General Reserve has been increased by a further £100,000 and now stands at £900,000. Fixed Assets are practically the same as last year after applying the Depreciation of £100,000 shown in the Profit and Loss Account.

I would draw your attention to the fact that the profit carried to the Balance Sheet is £11,786 greater than in the previous year.

Once again we have only been able to place £100,000 to General Reserve. The present incidence of taxation prevents any further allocation.

As to the activities of D. Napier & Son, Limited, I cannot speak, any more than I can of our own activities, but I can say that the great manufacturing facilities, engineering resources and accumulated managerial experience of your Company have played their part in the development, production, and the successful operation of the Sabre engine which is fitted to the Typhoon aircraft, which no doubt you have seen referred to in the National press, where its sorties are almost a daily feature of the official communiques. We congratulate all connected with this achievement.

In conclusion, on behalf of the Stockholders, he conveyed their sincere thanks to the Staff and Workpeople with a special word for the Committees of the Staff and Workpeople, whose help for so many years had been such an invaluable contribution to the moral success of the Company.

The report was adopted and a dividend of 10 per cent. approved.

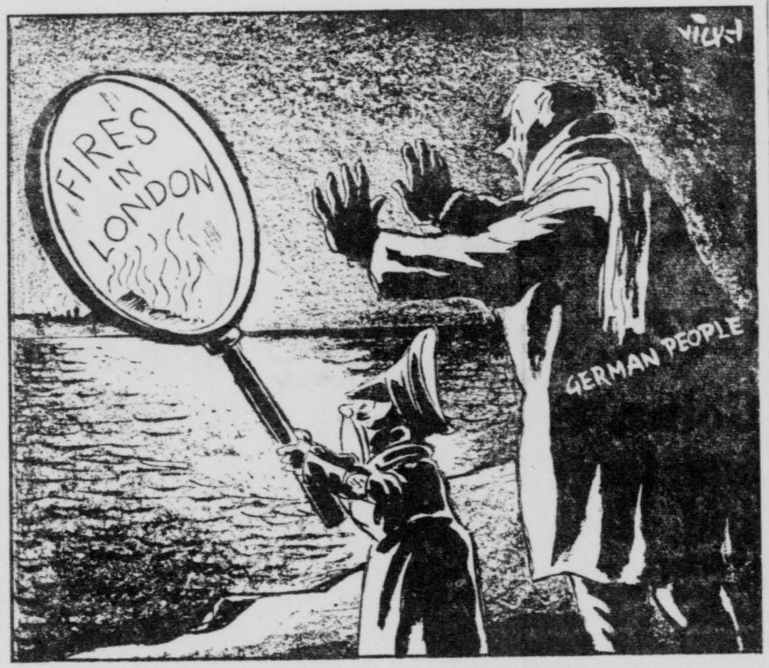
Finland Wants Peace

MR. PAASIKIVI, Finland's former Prime Minister, has returned to Helsinki from Stockholm.

He has been there since February 12. For what purpose? It is universally assumed that his object was to get in touch with Mme. Kollontay, the Soviet Minister to Sweden.



It is therefore reasonable to suppose that Mr. Paasikivi has brought back with him at least an indication of Russia's peace terms. There is no doubt whatever that Finland is anxious to get out of the war—if she can do so on terms which are not too onerous, and without having to pay too high a price in the form of immediate reprisals from Germany.

★

"We are ready to accept peace terms," said Mr. Tanner, Finland's acting Prime Minister, yesterday. "But in case the terms are not agreeable we have to go on fighting."

Finland's change of attitude has been markedly stimulated by recent warnings from America. Mr. Cordell Hull, who has been a good friend to Finland, has roundly advised her to get out of the war while she can still hope for a reasonable settlement.

It is premature to indulge in speculation about the substance of Russia's demands. For all enemy countries the Allies' terms are, in the first instance, "unconditional surrender." But once a country has agreed to place itself without conditions at our mercy, the appropriate armistice terms may vary according to the circumstances and needs of the occasion.

LETTERS

Larger families

AMONG many causes for the opinion disclosed by the recent Gallup Poll that most people prefer a family of one or two I would place the following foremost.

In general society is not friendly towards the larger family. Anyone, like myself, with three children is regarded with a mixture of pity and scorn that one should be so foolish and "improvident" as to have a "large" family.

It is difficult to get a suitable house for children. The modern middle-class villa has a garage but no nursery. It is impossible to get domestic help. The mother is a martyr to her children instead of enjoying them. Husbands are called up and hours are spent in solitary hard labour at home.

Today accommodation for confinements in hospitals and nursing homes is extremely limited.

My solution of the problem:

Children must be considered a great asset, not a liability.

Middle-class and working-class houses must be planned with every labour-saving device and a playroom or nursery. Mothers' helps are essential both to give the mother a chance to bring up her children properly and to have some relaxation.

At the time of confinements, adequate accommodation in hospital or help in the house should be provided.

More education in the function of motherhood (and fatherhood) should be given. During labour, suitable anæsthetics or analgesia should be to hand, if required, in all normal cases.

The financial burden must be lifted and equal opportunities in education, health services, etc., ought to be provided. Some form

SPOTLIGHT

By A. J. Cummings

IT is now pretty clear that the return of the Luftwaffe to London is dictated by the Nazi Government's urgent need to bring some sort of comfort to the German people.

The intention could scarcely be to destroy the capital or disorganise its administrative functions or to intimidate the population. What the German bombers were unable to do in great force in the prolonged blitz of 1940-41 they cannot hope to accomplish today.

Every German machine lost in these non-military raids means a wastage in the enemy's limited bomber strength, which up to the present has been carefully conserved in order to meet the coming invasion of Western Europe.

Useful wastage

Such wastage, which includes seriously damaged machines as well as those (with their crews) that do not return to base, must be severe and serious if there is an attempt to keep up the pressure continuously.

On the other hand, an early opening of the Second Front will compel the German High Command, which has no doubt agreed reluctantly to Goebbels's propaganda reprisals, to switch the random-raiders from London to targets of critical military importance.

embellishments designed to suggest that we may soon be better off with another and fitter Prime Minister.

Sinister whispers

These sinister whisperings—similar to the periodic malicious gossip about President Roosevelt's health—have originated, of course, among those who do not exactly love the Prime Minister. It is high time they were confuted and muzzled.

I am categorically assured by persons who certainly ought to know that there is no whit of truth in them and that Mr. Churchill is at the top of his form physically and mentally.

If for the time being he is a little more solemn of aspect, and less volatile in manner, that is to be attributed to his preoccupation with the gigantic enterprises that lie almost immediately ahead.

Now is the time to sustain him in these critical preparations rather than to imply without any sort of evidence that he is physically unfit to be in charge.

Something has happened in British Films

By RICHARD WINNINGTON

NEWS CHRONICLE FILM CRITIC

IN 1943, fifth year of war, a new Battle of Britain began—a savage, defensive struggle against the American stranglehold on that powerful instrument of propaganda and profit—the cinema.

Mr. J. A. Rank came into the open as the self-appointed champion of British films—by virtue of his acquisition of studios, distribution companies, cinemas and equipment-producing companies.

★

HE undoubtedly threatens and frightens the American film monopoly. His declared purpose is to put British films on the map.

He visualises a world market where by means of celluloid he can sell the British spirit—as conceived by a Methodist millionaire—and British goods. Trade follows films, he says, so good British films will do wonders for the general market. He is a determined and resourceful man of finance. His favourite film is "The House of Rothschild."

In describing his vision and purpose he uses a string of cliches—"lift up people's ideas," "give them a sense of responsibility," "the British character," etc.—tinged with uplift and emphasised with many gestures. Any argument about the future of British films inevitably ends at the enigma of Mr. Rank.

★

BUT a much more important event, to my mind, took place in that year, the significance of which has escaped many persons, including, I should say, Mr. Rank: nothing less than the astounding birth, after 25 years, of a native tradition in British film-making—a tradition owing little to Hollywood, Germany, Russia or France.

This occurred because a number of intelligent and imaginative young men, more or less cradled in the cinema, were left in the depleted studios of England and, by the exigency of the situation, allowed their heads.

They forged out something that kept pace with the true spirit of a blitzed and threatened Britain. They were driven back to the roots of film making and they seemed to be almost startled by the material they found. And then, when the threat had to some extent lifted, they emerged into fiction films and a tradition.

It took a war to shake the star dust of Hollywood from our lenses and the achievement was the wedding of documentary and fiction into a style, indigenous to Britain, containing all the seeds of an exciting future.

A curious thing this, that no one drew the obvious conclusions from our national flair for documentaries. Unexcelled before the war, they became truly magnificent in such films as "Britain Can Take It," "Target For Tonight," "The Silent Village." Here were the flavour and idiom we needed.

★

BUT the peak had been reached. The next step from documentaries was inevitable.

Three films mark this evolution—"Millions Like Us," "San Demetrio, London," and "Thursday's Child." With many crudities, much confusion and little polish they offer us something honest and warm and as native as Dickens, Trollope or Wells.

"Millions Like Us" is the work of two young script writers turned directors, Frank Launder and Sidney Gilliat. Into the account of a working-class family in war-time is threaded a simple love story of such rare sincerity that it ranks as among the most moving of all war films.

A feeling for the rhythm of working-class life, great atmospheric truth throughout and a tight grip by the directors on emotion and humour cause me to think of this film with gratitude and pride.

★

"SAN DEMETRIO, London," has little of the sparkling virtuosity of "In Which We Serve," misses several highlights of high dramatic value and seems shy of venturing outside the documentary frame. But Charles Frend, the young director, has given a composite portrait of British merchant sailors to warm the hearts of sailors all over the world.

"Thursday's Child," the first film venture of playwright Rodney Ackland, is slow, uneven and sometimes amateurish. Yet I have never before seen the lower middle classes of Britain so truthfully portrayed.

Here are their houses, their hopes, their loves and their accents; their absurd snobbery, their insecure dignity and their amazing goodness and courage.

★

I WOULD not attempt to claim these are "box office" in the sense of "Pygmalion," "Colonel Blimp," "Mr. Chips" or "The Four Feathers." These had a well-deserved success. They cost money and they earned money. Fine acting and directional skill and publicity ensured that.

But I must insist that, in the basic sense, they were not British any more than the string of epics promised us from Korda and M.G.M. look like being, and the visual idiom was imitative.

The shiny smoothness of production betrayed the inferiority complex which has cost us 25 years of stagnation and the fatal conviction that only Hollywood knows how to do it.

The cinema must always entertain, but any plans for the establishment of a market for British films which exclude entirely the development of this great native power we have found will only end in the destruction of the British cinema.

★

HOWEVER fumblingly we have found our feet in these three films—the thing is that we have done so.

The possibilities are staggering. With a detached imaginative approach, with a lyrical realism, we can project the movement, sound and shape of this island, the emotional nuances of the people, its subtleties of atmosphere and architecture.

For us the American approach is wrong. The best way of selling British films is to make films that could be made nowhere outside Britain and by nobody but British directors and writers.

But the film is an art unlike any other in that it has a ready-made public clamouring to pay. With such rich loot involved Big Business has automatically from the start stifled, vulgarised and kept it backward. Can it be different in Britain?

THIS PAGE IS DECLASSIFIED IAW EO 13526

An exact parallel is the case of Italy. She surrendered "unconditionally" to the Allies; but at the same time they communicated to the Italian emissaries their terms of surrender.

It may be presumed that the armistice with Finland will be concluded on the same basis.

The Red Army's spectacular successes on the Leningrad front have given point to Mr. Cordell Hull's advice to Finland. It is obvious that the longer she delays the harsher are the terms which the Allies are likely to impose. From Finland's point of view, the time factor is important.

Anzio

CORRESPONDENTS at Allied H.Q., North Africa, have now protested against Mr. Churchill's suggestion that they are in part responsible for "alarmist" reports about the position in the Anzio bridgehead.

Their indignation is justified. The reports which they give faithfully reflect the content and tone of the information supplied to them. Why cannot the Allied authorities be honest in this matter and admit that, if reports on the Anzio situation were unduly pessimistic, the responsibility is theirs, and not that of war reporters who get their information from—and have it censored by—the military on the spot?

... of family allowance, together with cheap school meals, milk, etc., is necessary.

With these reforms, there is a hope that the one- or two-children families may become four-children families.

Brockenhurst, Hants.

★

AS one who is hoping to get married in the near future, I experienced a certain amount of annoyance when I read your comments.

Do you know that the Board of Trade does not allow enough furniture coupons for a newly-married couple to obtain a complete bedroom suite, and that a utility bedroom suite, if you could obtain the whole of it, would cost £40?

One must add to this the cost of two pairs of sheets at £8, one pair of blankets at £8, and one overlay at £10. To add the cost of a dining room suite is unnecessary as sufficient coupons are not allowed for such a luxury.

When I am living in one room (if I can find one) for which I shall have to pay upwards of £1 weekly, what is going to be my attitude, and the attitude of millions like me, to having children?

D. F. BELLAIRS

Oxford's "No"

WHATEVER may be the cause of the refusal of the gift of valuable books from Spain, it is much to be regretted that such bad taste should be exhibited by Oxford University towards a scientific society in Madrid.

It is to be hoped that some other university will accept the gift, offered no doubt in good faith by those making it.

W. A. JORDAN
Blackheath, S.E.3.

From Dickens

IN a recent B.B.C. Brains Trust session the speakers appeared somewhat at a loss to contribute an apt phrase or motto suitable to commend to a young man or woman just starting out in life.

May I suggest to the listener responsible for the question that Miss Betsy Trotwood's advice to her nephew seems to offer the inspiration required? "Never be mean; never be false; never be cruel." In this message Dickens gives three guiding principles which could scarcely be bettered.

(Mrs.) DOROTHY A. CANNELL
Shepperton.

It has been known for a long time that the Germans, driven though they were by the Allied strategic air offensive to concentrate on the production of fighters, were also building up a relatively small force of heavy bombers for retaliatory purposes.

When I mentioned this officially ascertained fact several months ago in "Spotlight," and pointed out that we must be prepared for the temporary return of a minor blitz, I was surprised to receive abusive letters from various people who accused me of telling lies about the enemy's intentions in order to divert attention from the Second Front and of playing the Government's game in helping to delay it!

London reactions

Londoners seem to be reacting sensibly to the renewal of the attacks on their great city. Many who endured the incessant ordeal of the first blitz may be inclined to feel some resentment at the thought of having once again to fortify their spirit and adapt their lives to the menace of the air.

But they will soon make the necessary adjustments in their habitual existence and will outride the storm.

Londoners, however, will watch with shrewd understanding the degree of efficiency revealed by the anti-raid defences on the ground and in the air. They are alert-minded and experienced on the subject of the blitz in all its aspects, and would certainly not be deceived by smooth reassurances unrelated to observed facts.

The final answer

They will also expect with newly stimulated eagerness a rapid approach to the Second Front zero hour; for they know well enough that a successful assault on Western Europe provides the final answer to the problem of defending Britain against the intrusions of the Luftwaffe.

Meanwhile, though I am heartily in favour of making known air raid incidents which do not impart information to the enemy, there is much to be said for not playing up the raids in such a manner as to supply Goebbels with valuable material and give the enemy a false impression of what he has accomplished.

Premier's health

In his Parliamentary review of the war situation Mr. Churchill spoke vigorously and well — without flamboyancy, with a proper sense of perspective and in the spirit of a leader deeply conscious of the fact that the nation must soon brace itself for the supreme climax of the European struggle.

Since his return to London, after a brief convalescence at Marrakesh, there has been a kind of whispering campaign about the state of Mr. Churchill's health.

It has been said, with significant headshakes, that he is not fully recovered; that he tires easily; that he has not quite his former grip of affairs; that he is unusually testy and meddles in small departmental affairs in a manner foreign to his nature; and so forth, with numerous

precisely what he meant by his attack on the British Press in this week's war debate.

Annoyed, it would seem, at being proved wrong about the traitor Mihailovich, for whom he put up a defence in the last ditch, he appeared to think the British Press had been largely to blame for throwing its weight on Marshal Tito's side. (In fact, for a long time, the "Daily Worker" was the only paper to utter a warning about Mihailovich.)

At all events, Mr. Pickthorn has come to the patriotic conclusion that "on the whole English newspapers are now inferior to those of almost any other country."

This is due partly to "the ignorance or incompetence of the newspaper proprietors"; but in part also it has been

> gleichschaltung [an almost untranslatable Nazi word which means roughly a compulsory bringing into step] and especially a form which has been not so wicked in the perpetrators but is more contemptible in the victims which is done by asking journalists to luncheon or even introducing them to a peer for dinner.

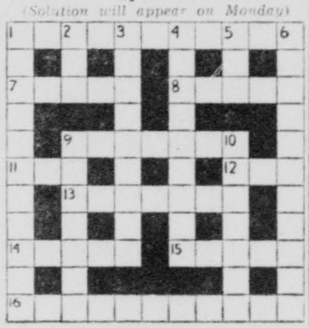
Nobody, assuredly not Mr. Pickthorn, would make me believe that Mr. Churchill at any time invited the editor of the "Daily Worker" to lunch at 10, Downing Street, in order that he might meet Lord Cranborne and be fed and dazzled into boosting Tito against Mihailovich.

Read Hansard

But what did Mr. Pickthorn really mean? Did he mean anything at all? Or was this stupid attack on the Press in general merely the usual Pickthorn tripe?

It would be impossible to compete with another member's devastating remarks on Mr. Pickthorn's speech and alleged spiritual affiliations. But I strongly recommend Hansard.

★



I learn that General Montgomery, who has been addressing vast numbers of Second Front Anglo-American invasion troops in all parts of the country, has made a tremendous impression no less on the Americans than on the British.

"Already," says one of his admirers, "Monty seems to have the invasion army in his pocket."

BEYOND THE HEADLINES

SLAP-BANG in the middle of a recent City company meeting the Chairman recited John of Gaunt's piece on England from "Henry V," we read. Hardly an eye was dry, we guess; hardly a Big Business paunch unheaved. Our City spies report that this growing practice began with Sir Nero Gowle, of Globular Gold Concessions, Ltd., breaking off suddenly and saying: "Before getting on to the rough stuff, saps, I will recite you Shelley's Ode to a Skylark. Fishy, lock them doors."

It's psychological, our spies add.

Revolt

"Mr. —— pays a tribute to his publisher, Mr. ——, whom he has 'watched with much interest' since he was at Oxford."—(Book Review.)

O HEART, be still,
Mind, cease your labour.
I am sick of watching
Faber and Faber.

The heartless blaze
Of a heedless sun—
Where does it get you,
Weary one?

I will break free
Beyond their ken,
And take a gander
At Methuen.

Or seek that place
Where in silent ranks
The doomed ones stare
Upon Gollancz.

S-sh!

"The fat will rise to the top in a hard white lid."
(Min. of Food manifesto).

WE stared at this for some time before realising it was a secret message. Decoding is not difficult. "The fat will rise to the top" means "The Big Boy will take over as Britain's Man of Destiny." "In a hard white lid" obviously means "in Ascot Week," when white or grey toppers abound.

When the Wooltonian coup d'état is over, don't say Old Partisan-Shy didn't pass the word on.

Look here, sir

"Indeed, I prophesy with some confidence. . . ."
(Military Commentator)

"SOME day," a jaundiced member of the brotherhood said to us recently, "one of the boys may prophesy not with confidence but with accuracy, and thus blow the racket sky-high."

Timothy Shy

RAID VICTIMS STILL BURIED

Many were children: they did not go to shelters

GERMAN bombers showered thousands of incendiaries together with high explosives in almost a straight line across London on Wednesday night, wrecking middle and working class homes and flats, burying old people and young children alike beneath masses of rubble.

But of the fires which were started few traces were left by the morning, when a few planes, apparently on photographic reconnaissance, set London's sirens going for the first daylight Alert in seven months.

The night raid, on a smaller scale than the previous attacks, cost the Luftwaffe five planes. Four were brought down in this country and one over enemy territory. Members of crews who baled out were captured at points on London's outskirts and between Cambridge and London.

Stayed indoors

A number of people are believed to be buried beneath tons of the debris of working-class flats in one London district. Most of one block and a great part of one adjoining crashed, carrying down a large number of people who had remained in their rooms.

Late last night, although some dead had been pulled from the debris, searchers were still trying to account for many other people who had lived there, a large proportion of them children.

One of the men who had been almost blasted from his flat told a News Chronicle reporter:

"If only the residents had had more faith in the underground shelters around the buildings, many of them would have been saved. The shelters actually stood up under the great weight of debris which covered them."

Clung to a doorway

Rescued from her third floor flat after the walls had fallen away, Mrs. Robinson told a News Chronicle reporter: "I heard one bomb come down and the doors in the flat and all the windows were blown away. I was thrown to the floor.

"Then there was an explosion which I cannot describe and the whole building seemed to collapse. I was clinging to the edge of the doorway and could feel the heat of flames coming close to me.

"But almost at once rescue workers were on the spot. If it hadn't been for all the men who rushed to help, many of us would have been burned to death."

This incident, one of the biggest since the 1941 blitzes against London, called for all the resources of the A.R.P. services, but within minutes of the bombing hundreds of people, many of them almost naked, children who could not find parents and parents looking for children, were taken to rest centres.

Lost voice regained

In one of these lay a woman robbed of her voice by the shock of the bomb and unable to control violently shaking limbs. A short while later another bomb fell near the rest centre, blasting the windows—and the shocked woman regained almost miraculously control of voice and limbs.

A large section of a working-class housing estate in another London area was very badly

A SHELTER PROTEST

PUBLIC concern at the non-opening of a local deep air raid shelter was referred to at a meeting of one London borough council last night.

An alderman asked: "Will the Civil Defence Committee give early consideration to this matter, so that if they feel the shelter should be open they can make representations to the Minister of Home Security?"

The mayor, who is chairman of the C.D. Committee, agreed, adding that the question had been raised by the C.D. Committee before, and had been told the local authority has no standing or responsibility in the matter.

Buried treasure is under London debris

MANY thousands of pounds' worth of pictures and other art treasures are in a 30ft. deep wine cellar beneath the debris of a fine art dealer's premises almost blotted out by a bomb in a London district. Smoke was still creeping from the rubble yesterday.

One of the heads of the firm who has been in business there for many years said to a reporter last night:

"Beneath that pile of debris is a wonderful pair of candelabra by Guthier I am keeping for Queen Mary. I hope it will be saved.

One worth £15,000

"There is also a Franz Hals painting worth £15,000, Rembrandts and Van Dycks. There are over £10,000 worth of pictures from another gallery.

"I was keeping two valuable tapestries for Lord Halifax just removed from the Foreign Office to be cleaned. One is destroyed. Another, a Beauvais, sold previously for £6,000, has been saved.

Police last night picketed the roped-off approaches to the site of the buried treasure. People entering the area were closely questioned.

The dealer's son, a director of the firm, went into the bomb-shattered premises soon after the raid and was arrested and taken to the local police station. He was allowed £5 bail. His case was deferred till March 2. He is consulting his lawyer.

Charles, 17, free-lance rescuer

After being blown out of bed, through the window and into the yard, Charles Dennis (17), began his "free-lance" rescue work.

It happened in Wednesday night's raid, when his house was wrecked.

Charles knew that beneath a 50ft. high mound of debris 100 yards away was an underground shelter. Pulling stones and rubble to one side, he managed to dig his way through.

He helped to rescue four people from the wrecked shelter, then continued his search for survivors all through the night and all next day.

Typhoon squadron gets 25 in month

Led by Sqdn.-Ldr. J. R. Baldwin, D.F.C. and Bar, a Typhoon fighter squadron based in England destroyed 25 German aircraft over Northern France during January.

This was a record for any Typhoon squadron.

The squadron also damaged over 10 other German planes, shot up four barges and made a daring attack on a large merchant ship in Boulogne harbour, despite heavy flak from ships and shore batteries.

News Chronicle picture of A.R.P. men working last night by floodlight in the search for victims in the debris of working-class flats in the London area bombed during Wednesday night's raid.

The work was suspended when the Alert was sounded.

Cigarettes for Italy inquiry

INVESTIGATIONS into the loss of cigarettes sent by relatives and friends to troops in Italy are to be extremely thorough.

The inquiry, which may take a long time, is being conducted jointly by the War Office and the Army postal authorities.

A War Office official pointed out yesterday that cigarettes pass through a great many channels before reaching their destination and that there are a large number of opportunities for pilfering.

Reports from Italy put losses of cigarettes as high as 75 per cent. of the total sent, but the official view is that this estimate is too high.

Bax overture for factory workers

The work was suspended when the Alert was sounded.

Cigarettes for Italy inquiry

INVESTIGATIONS into the loss of cigarettes sent by relatives and friends to troops in Italy are to be extremely thorough.

The inquiry, which may take a long time, is being conducted jointly by the War Office and the Army postal authorities.

A War Office official pointed out yesterday that cigarettes pass through a great many channels before reaching their destination and that there are a large number of opportunities for pilfering.

Reports from Italy put losses of cigarettes as high as 75 per cent. of the total sent, but the official view is that this estimate is too high.

Bax overture for factory workers

The first performance of a new orchestral overture, "Work in Progress," by Sir Arnold Bax was

PLANNING BETTER WATER SUPPLY

THE Government's proposals for improving water supplies throughout Britain are to be published in a White Paper before Easter.

In giving this assurance to the House of Commons yesterday, **Mr. Willink** (Minister of Health) said that the supply in rural districts was the most urgent aspect of the problem and would therefore be dealt with first. The Bill he proposed to introduce would deal with sewerage in rural districts as well as water.

Although conceding that much had to be done, he pointed out that 95 per cent. of our people were supplied with pipe-line water, and that our typhoid deaths were the lowest in the world.

National Board plea

He was replying to a debate during which the need for improving water supplies on a national basis was stressed from all parts of the House.

Mr. T. Levy (Con., Elland)) called for a National Water Board with regional control of the various water-shed areas. The Minister of Reconstruction should direct the whole matter. What was the use, he asked, of talking about the building of houses, the location of industry, or the dispersal of population, without water?

Mr. Levy drew attention to what he considered "a great potential danger in our swimming pools." The water supply was such today that we could not spare the 100,000 or 150,000 gallons necessary to refill the baths. Now an open-air bath filled at the beginning of the

Extra hour of daylight 'special need'

DOUBLE Summer Time this year will run from Sunday, April 2, to Sunday, August 13.

Elaborating Mr. Herbert Morrison's announcement in the Commons yesterday, the Home Office stated last night:

"The Government has had in mind the special need this year for the utmost effort in the production and supply of munitions and in accelerating all the services required for the armed forces.

"Freight traffic is marshalled and dispatched mainly towards the end of the day when the extra hour of daylight gives the maximum advantage.

"The avoidance of delay and traffic congestion is not only vital to production but of paramount importance for forthcoming military operations. Moreover, the saving of fuel has been found to be

21 gns. a week four-room flat

COUNTRY RAMP TOO

News Chronicle Reporter

TO find a furnished flat in the West End at a reasonable rental is as likely as finding domestic help. At an unreasonable rent, the chances depend upon how high the bidder will go.

Anyone willing to pay a 100 per cent. increase on 1941 values can rent a four-room luxury flat at 21 guineas a week (without linen).

This, and a 15-guinea-a-week three-roomer in the same district, were all one of the largest letting agents had to offer in Mayfair. Two other large agencies said they had no West End flats on their books, and another was loth even to discuss the possibility without first knowing "how much would you pay?"

The investigator, with luxurious indifference, said that for her purposes the rent didn't matter: she would like some to choose from. "But my dear woman," remonstrated the letting agent, "you must know your income!"

SNAPPED UP

Barely furnished two-room flats on the upper floors of old-fashioned Mayfair houses that were advertised in a newspaper yesterday morning had already found tenants willing to pay seven guineas a week by the afternoon. Four of the largest blocks of flats and apartments have no vacancies.

Exploitation of the scarcity of furnished dwellings is not confined to London districts. Small furnished country houses within a 50-mile radius of London are also being let in some cases at rents quite out of proportion to their value.

An instance is reported from Sussex where, for a four-room thatched cottage, three miles away from the shops, a family is paying six guineas a week.

The four rooms are barely furnished and the tenants have since learned that the previous rent was 25s. a week.

If the need for new homes is not to be met for a long time to come, tenants are likely to find themselves increasingly a prey to the greedy landlord.

Jew-baiting in "a minor form"

When Denis Share, described as a Jew, of Victoria Park Square, E.2, was fined £5 at Marlborough Street yesterday for absenting himself from work at Messrs. Waring and Gillow, he said he was suffering from acute migraine (headache) accentuated by Jew-baiting in the factory.

The chief engineer of the factory said there was some Jew-baiting in a minor form

Education Bill's slow progress

THE leisurely progress of the Education Bill was resumed in the House of Commons yesterday, when members found themselves still faced with 64 pages of amendments.

Before the debate started **Mr. R. C. Morrison** (Lab., Tottenham) asked if it was intended to allow the Bill to drag on for the rest of the session—nearly 12 months.

Mr. Eden (Leader of the House) replied that the Government was very anxious to make progress with the Bill but did not wish to have to ask the House to resort to the guillotine—a device for ruthlessly limiting discussion.

600 amendments

So the debate continued on the basis that members were free to talk as long as they liked, and to move as many amendments as they liked, however obvious it might be that the amendments had no chance of being accepted.

So far the progress made appears to be illusory. As soon as amendments are disposed of others take their place. They now total about 600. If fresh amendments are added at the present pace progress will tend to be backwards.

Pensions go up

Increases in the smaller pensions of retired civil servants, teachers, police, firemen, Royal Irish Constabulary, local government officers and certain collectors of taxes are provided for in a Bill issued yesterday.

The proposed new scales give a 25 per cent. increase in some cases and 20 per cent. in others.

THEY HAVE TOO MANY ORANGES

SEVERAL Edinburgh shopkeepers with large stocks of bitter oranges are advertising in newspapers in the hope of getting rid of them in areas which have not had allocations.

An advertisement in the personal column of a Midlands newspaper has brought a brisk response from the Manchester area to one enterprising tradesman.

In the past fortnight about four million pounds of bitter oranges for marmalade making have been on sale in Scotland.

"In Scotland people have to eat more sugar because of the colder weather," one shopkeeper said, "and that is why they are unable to take full advantage of these supplies"

CLASSIFIED ADVERTISEMENTS

Each advertisement is inserted in one-half of the circulation of the Main Edition of the News Chronicle. Equal area distribution is ensured mechanically.

SALES BY AUCTION

By Order of Trustees at low war-time reserves.

H. S. HAWLEY & CO.

WILL AUCTION AT THE MART, E.C., in Lots, on TUES., 29th FEB. SMALL HOLDING, comprising 2 Cottages (one with possession) and 30 acres of arable and rough woodlands for sale. Apply Messrs. NICHOLAS, 1, Station-rd., Reading.

damaged when three heavy H.E.s fell in three neighbouring streets. In some cases whole families were destroyed, a large number were seriously injured and many houses were devastated.

Squads of rescue workers with powerful cranes worked all through the night and all day yesterday and were still at the task last night.

New evacuation

Canvassers went from house to house in one London borough yesterday compiling new lists of women and children wishing to leave London.

"We are compiling new lists in preparation for a new evacuation of the City," said a Civil Defence official.

Montgomery meets railwaymen

Railway men and women, representative of every grade of railway worker from all over the country, have been addressed by Gen. Montgomery.

given last night at a factory near London by the London Symphony Orchestra, under George Weldon.

This work, written at the request of Ensa, is conceived in a single span of eight or nine minutes of music.

It is capable and workmanlike music, though neither particularly diverting nor arresting from the hearer's point of view.

It appears that the overture was deliberately designed to provide the type of opening to a concert which would whet the audience's appetite for more. Of that standard it falls appreciably short.

The performance probably was not of the best, and it may be that a second hearing will prove the work to have more in it than at first appears. **Scott Goddard**

The refugee

A boy fined 4s. at Trowbridge juvenile court for a cycling offence yesterday said his father had been deported to Germany, his mother was in Guernsey, while he was a refugee in England.

season need not have its water changed till the end. Covered baths, open all the year, need be cleaned only once a year.

Baths "menace"

It was thought that chlorination cleaned the water, but a distinguished medical man had told him about the potential menace of swimming baths today. The organic materials in the water decomposed. There was the discharge from ear, nose and throat, containing various germs. There were the organisms of venereal disease. Chlorination did not kill that lot.

As for the water position in country districts, Mr. Levy declared that in a number it was worse than in South African villages.

Miss Megan Lloyd George (Lib., Anglesey), who had the satisfaction of seeing the Anglesey Water Bill given a second reading, insisted that an adequate water supply was essential for a prosperous agriculture.

Bold policy for Post-war—Woolton

"The policy of restoration is not enough. We must aim at something better than in the past, and I believe we are ready for a bold and courageous approach to the post-war world."

Lord Woolton, Minister of Reconstruction, who said this at Manchester yesterday, claimed that the Government's record during the past four years showed that it was not likely to be failing in capacity, courage or enterprise when the war was over.

Fire float that was a welding ship, too

MOST of the Home Office inquiry into the fire, police and civil defence services of Newcastle-on-Tyne yesterday was concerned with the purchase of a drifter for use as a fire float. Mr. Roland Burrows, K.C., is conducting the inquiry.

Mr. Mortimer Chadwick (former fire brigade superintendent) said Councillor Embleton (chairman of the Watch Committee) was looking for a boat for the Premier Welding Company. When the drifter was found the councillor said if it was not suitable as a fire float he would purchase it.

Mr. Chadwick said he declined Councillor Embleton's offer to provide his own crew and put on board firemen, who went with it on welding operations.

Mr. Duncan (counsel for the Treasury): It was an extraordinarily unsatisfactory arrangement? You know that now?—Yes.

Could have it any time

Councillor Embleton said he was looking for something much better than the drifter for the corporation. "I said to Supt. Chadwick that if I bought it he could have it at any time, so long as we were allowed to use it on the few occasions we needed it. As Supt. Chadwick wanted to get the boat at once I gave him authority to buy it for me."

Asked by Mr. Duncan why no report of the inspection of the boat was made to the Emergency Committee, Councillor Embleton replied that it was "irritating" to him to hear that a little thing like that should have been put before the committee.

Mr. Duncan: Let me give you a word of advice. Don't get irritated.

Referring to the purchase of the boat, Mr. Duncan said: "Looking back on it now, you can see that it is open to misconstruction?"

"Misconstrued"

Councillor Embleton: Not only open to misconstruction but apparently it has been misconstrued.

Mr. Duncan spoke of a document signed by Mr. Chadwick to the effect that the boat had been purchased by the Newcastle Fire Brigade authorities, and asked Mr. Embleton: "Were you not horrified to find that that document, having regard to the grossly misleading terms, was in the private file of the Premier Welding Co. and was not where it ought to have been—in the file of the fire brigade superintendent?"

Councillor Embleton: I fail to see anything horrifying about it.

The inquiry was adjourned

Phillips beats Scot for fourth time—By Fred Dartnell

THERE was a persistent sound of fury at the Lime Grove Baths, Shepherd's Bush, last night. This was caused by the battle between Al Phillips, of Aldgate, and Tommy McGlinchey of Glasgow.

Both men are in the new B.B.B.C. eliminating series for Nel Tarleton's feather-weight championship. They had three contests previously, Phillips winning each of them, and the Londoner continued his conquering way with McGlinchey retiring in the 8th round after putting up a characteristic fight.

The loser, with his persistent right swingers, kept up a good end for the first four rounds. Then Phillips, short-arm hitting with both gloves, took a heavy toll of his rival. McGlinchey became wild in his efforts and was sent more than once into a sitting position on the ropes.

He fought on against the odds until the eighth round when with a gesture of infinite weariness he made his token of submission, one of the hardest things a gallant fighter can bring himself to do.

Phillips boxed splendidly, and his hitting was most effective. The programme was for the Red Cross Prisoners' Fund and a ringside collection produced nearly £200 from a crowded house.

Other results were: Jackie Rankin (Southall) beat Marcel Lodovena (France) in third round; Ritchie Shinn (America) outpointed Johnny McManus (Glasgow).

CYCLE MEETINGS IN 1944

Arrangements are being made by the N.C.U. for twelve cycle race meetings in London, in addition to numerous evening fixtures and seven on the outskirts during the coming season.

Provisionally they begin with the Southern Counties C.U. meeting at Paddington on Easter Monday, April 10, and close with London Centre meetings on September 3 and 10.

London Section of the British League of Racing Cyclists will open the season with a cross-country race over a 15 miles Kent course in the neighbourhood of Downe and Cudham, organised by the Southern Coureur Club, on March 5.

Verity's grave

Capt. Leonard Hobbs, son of Jack Hobbs, the England cricketer, has discovered Hedley Verity's grave in a civilian cemetery in Italy and arranged for the name to be engraved on it.

Lt. Marmaduke James Hussey, who was in the Oxford cricket team against Cambridge in 1942, is reported missing in Italy. Hussey also played Rugby football for Rosslyn Park.

J. B. Lees has withdrawn, through injury, from the Scotland Rugby side to oppose England in the Services international at Murrayfield. J. D. H. Hastie (Melrose), who played three times for Scotland in 1938, becomes hooker with R. Cowe and J. H. Campbell on either side of him.

There will be no racing at Wimbledon greyhound track on Saturday. The Spring Cup, first rounds of which were to have been run, is cancelled.

P.T. winger returns

Wilson, Crystal Palace winger, took part in the Army P.T. "toughening" display at Wembley last Saturday. Tomorrow he returns to outside-left in his club's team against Brighton in the South Cup game at Selhurst.

With R. White assisting the British Army at Dulwich Tottenham Hotspur will include Howe at right-half for their home game with Portsmouth.

Chelsea's attack at Watford will be selected from Spence, Bowie, Payne, Fagan, Tennant and Mitten.

given last night at a factory near London by the London Symphony Orchestra, under George Weldon.

This work, written at the request of Ensa, is conceived in a single span of eight or nine minutes of music.

It is capable and workmanlike music, though neither particularly diverting nor arresting from the hearer's point of view.

It appears that the overture was deliberately designed to provide the type of opening to a concert which would whet the audience's appetite for more. Of that standard it falls appreciably short.

The performance probably was not of the best, and it may be that a second hearing will prove the work to have more in it than at first appears. **Scott Goddard**

The refugee

A boy fined 4s. at Trowbridge juvenile court for a cycling offence yesterday said his father had been deported to Germany, his mother was in Guernsey, while he was a refugee in England.

season need not have its water changed till the end. Covered baths, open all the year, need be cleaned only once a year.

Baths "menace"

It was thought that chlorination cleaned the water, but a distinguished medical man had told him about the potential menace of swimming baths today. The organic materials in the water decomposed. There was the discharge from ear, nose and throat, containing various germs. There were the organisms of venereal disease. Chlorination did not kill that lot.

As for the water position in country districts, Mr. Levy declared that in a number it was worse than in South African villages.

Miss Megan Lloyd George (Lib., Anglesey), who had the satisfaction of seeing the Anglesey Water Bill given a second reading, insisted that an adequate water supply was essential for a prosperous agriculture.

Bold policy for Post-war—Woolton

"The policy of restoration is not enough. We must aim at something better than in the past, and I believe we are ready for a bold and courageous approach to the post-war world."

Lord Woolton, Minister of Reconstruction, who said this at Manchester yesterday, claimed that the Government's record during the past four years showed that it was not likely to be failing in capacity, courage or enterprise when the war was over.

material.

Corporal crossed the bridge alone

Acting Cpl. Alfred Harry Hawes, of the Hampshire Regt., whose home is in Clapton, is a man of "calculated bravery."

In Italy he led an assault detachment with great dash and determination, seized a bridge and then recrossed it under heavy fire to report on the situation.

He brought up a party of reinforcements, who were unable to cross owing to enemy fire. After engaging the enemy with small arms fire, Cpl. Hawes recrossed the bridge alone to demonstrate that it was feasible to a determined man.

"As a result of this act urgently needed reinforcements were led across the bridge," says last night's "London Gazette."

Hawes receives the Military Medal.

Your war garden

It is of course too early to spray with lime-sulphur to check apple and pear scab, but a preliminary preventive is to cut out any shoots having swollen or blistered bark, and to burn them right away. Fallen leaves found on the ground should also be consigned to the fire, as these too are responsible for carrying over the disease.

Wall fruits, such as peaches, soon suffer from frost, so give protection. Netting, light sacking, or even old lace curtains suspended over the trees will often save damage. The material may be lifted during the day **ALBERT GURIE**

Phillips beats Scot for fourth time—By Fred Dartnell

THERE was a persistent sound of fury at the Lime Grove Baths, Shepherd's Bush, last night. This was caused by the battle between Al Phillips, of Aldgate, and Tommy McGlinchey of Glasgow.

Both men are in the new B.B.B.C. eliminating series for Nel Tarleton's feather-weight championship. They had three contests previously, Phillips winning each of them, and the Londoner continued his conquering way with McGlinchey retiring in the 8th round after putting up a characteristic fight.

The loser, with his persistent right swingers, kept up a good end for the first four rounds. Then Phillips, short-arm hitting with both gloves, took a heavy toll of his rival. McGlinchey became wild in his efforts and was sent more than once into a sitting position on the ropes.

He fought on against the odds until the eighth round when with a gesture of infinite weariness he made his token of submission, one of the hardest things a gallant fighter can bring himself to do.

Phillips boxed splendidly, and his hitting was most effective. The programme was for the Red Cross Prisoners' Fund and a ringside collection produced nearly £200 from a crowded house.

Other results were: Jackie Rankin (Southall) beat Marcel Lodovena (France) in third round; Ritchie Shinn (America) outpointed Johnny McManus (Glasgow).

CYCLE MEETINGS IN 1944

Arrangements are being made by the N.C.U. for twelve cycle race meetings in London, in addition to numerous evening fixtures and seven on the outskirts during the coming season.

Provisionally they begin with the Southern Counties C.U. meeting at Paddington on Easter Monday, April 10, and close with London Centre meetings on September 3 and 10.

London Section of the British League of Racing Cyclists will open the season with a cross-country race over a 15 miles Kent course in the neighbourhood of Downe and Cudham, organised by the Southern Coureur Club, on March 5.

Verity's grave

Capt. Leonard Hobbs, son of Jack Hobbs, the England cricketer, has discovered Hedley Verity's grave in a civilian cemetery in Italy and arranged for the name to be engraved on it.

Lt. Marmaduke James Hussey, who was in the Oxford cricket team against Cambridge in 1942, is reported missing in Italy. Hussey also played Rugby football for Rosslyn Park.

J. B. Lees has withdrawn, through injury, from the Scotland Rugby side to oppose England in the Services international at Murrayfield. J. D. H. Hastie (Melrose), who played three times for Scotland in 1938, becomes hooker with R. Cowe and J. H. Campbell on either side of him.

There will be no racing at Wimbledon greyhound track on Saturday. The Spring Cup, first rounds of which were to have been run, is cancelled.

P.T. winger returns

Wilson, Crystal Palace winger, took part in the Army P.T. "toughening" display at Wembley last Saturday. Tomorrow he returns to outside-left in his club's team against Brighton in the South Cup game at Selhurst.

With R. White assisting the British Army at Dulwich, Tottenham Hotspur will include Howe at right-half for their home game with Portsmouth.

Chelsea's attack at Watford will be selected from Spence, Bowie, Payne, Paran, Tennant and Mitten.

WATERLOO CUP SURPRISE

THE first real sensation of the Waterloo Cup came yesterday afternoon when the Wembley track greyhound, Hylton, beat the original favourite, Countryman, in the fourth round, although odds of 5-1 were laid against him doing so.

Hylton is owned by a Harrow licensee, Mr. E. J. Brett, and had never seen a hare in the flesh until he was sent to the Southern Coursing meeting at Druids Lodge last month and there divided the Wilton Stakes, which was confined to track dogs.

He was quicker out of the slips than Countryman and scored all the early points. The favourite went by him brilliantly once, but Hylton got in again to win a gruelling course.

In spite of this performance Hylton was the outsider of the four survivors at the end of yesterday's coursing, odds of 20-1 being offered against his chance. Lord Lieutenant won two short but brilliant courses, and is a hot favourite at 7-4 on—he was, in fact, installed favourite after the third round and before Countryman's defeat.

Lord Lieutenant's speed may be judged by the fact that he finished his two trials yesterday in 9½ sec. and 10sec. respectively, and in his four courses has run only for 73½sec.

Jazz Record, who meets Hylton in the first semi-final, is quoted at 4-1, and Dutton Swordfish, who opposes Lord Lieutenant, at 9-2.

THIRD ROUND.—**Countryman** (8-15) beat Congress. **Hylton** (10-11) beat Valentine Castle. **Jazz Record** (5-4) beat Peerless Sight. **Trade Test** (11-10) beat Junior Cornette. **Right A Head** (13-2) beat Lotus Lily. **Dutton Swordfish** (1-2) beat Bryn Festal. **Lord Lieutenant** (1-4) beat Cyclopedia. **Heddon Water** (10-11) beat Shan Van Voght.

FOURTH ROUND.—**Hylton** (5-1) beat Countryman. **Jazz Record** (9-4) beat Trade Test. **Dutton Swordfish** (7-4) beat Right A Head. **Lord Lieutenant** (2-11) beat Heddon Water.

TORIES FIGHT "CIRCUS" WITH OPERA

News Chronicle Reporter

BURY ST. EDMUNDS. Thursday.

"Hark, hark, the dogs do bark,
The beggars are coming to town.'

THE first of them will be arriving tonight. Between now and polling day there will be 25 of them—a whole Beggar's Opera, all M.P.s, with two Cabinet Ministers and an Under Secretary heading the cast—all singing for Major Keatinge.

This is the up-to-the-minute reflection of the Conservative Central Office's concern at the progress now being made by Mrs. Corbett Ashby in the electoral fight which will end at the polls next Tuesday.

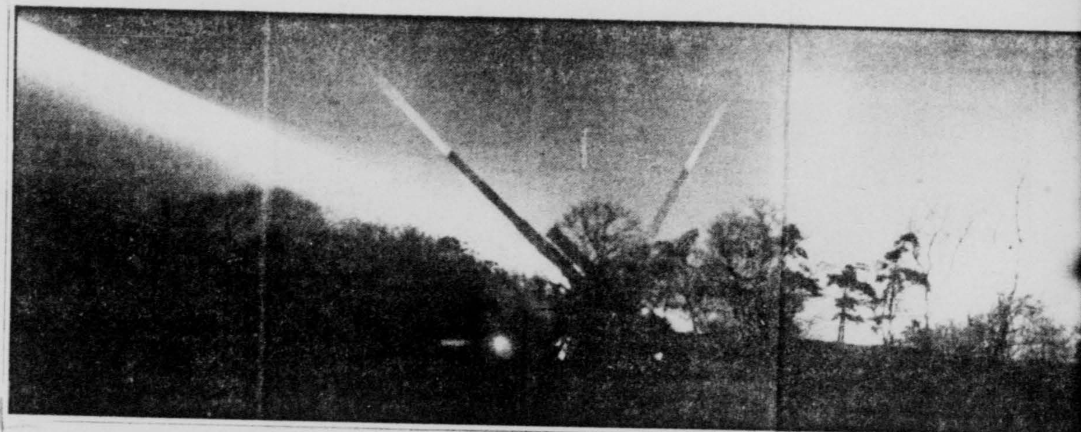
The minor song birds are already here. Mr. H. Willink, Minister of Health, and Sir Walter Womersley, Minister of Pensions, are on the way.

"Party politics"

Going to Major Keatinge's committee rooms to inquire if this was to be regarded as part of the official Tory equivalent of the so-called Acland Circus, I was told: "Not at all: It is a matter of party politics."

Now it seems the same label can be used for the announcement made earlier in the week that several hundred Liberals had signed the Conservative nomination paper. Mr. Halliley, the Tory agent, told me he had the names but he point-blank refused to mention any of them.

Against the Conservative Opera Mrs. Corbett Ashby will have had by polling day the support of four Independent M.P.s, one Common Wealth M.P., and two Liberal M.P.s. They are Mr. Vernon Bartlett, who is due to speak on Saturday, Mr. Tom Driberg, Mr. Clement Davies, Mr. Tom Horabin, Mr. George Reakes, Mr. John Loverseed and Mr. Charles White (coming tomorrow).



Claims cancel

Getting an authoritative estimate in a division which has not divided for 15 years is difficult. Mrs. Corbett Ashby's chances are now rated at evens, and if 15,000 to 18,000 voters out of the 31,000 eligible go to the poll the Conservatives believe their candidate will get in. If the vote goes higher, however, Mrs. Ashby's chances will improve.

Half the whole population of the constituency is accounted for by Bury St. Edmunds itself and Newmarket. It is this urban vote which is uncertain. Claims on both sides tend to cancel each other out.

In this respect, pending the arrival of the operatic stars, the song which appears to be most apposite just now is Captain Macheath's:

"How happy could I be with either
Were t'other dear charmer away;
But while they both tease me together,
To neither a word will I say."

Coalowners accused of "racket"

FUND EXPLOITED TO MAKE HIGH PROFITS, SAYS M.P.

IT was alleged in the House of Commons yesterday that the fund from which coalowners make up average profits if they fail to make those profits has become a racket. The charges went unanswered.

"Colliery managers, probably instructed by the directors, are taking advantage of every opportunity to reduce costs of production at the expense of this fund," said Mr. W. Foster (Lab., Wigan).

"Unless there is some effective check at the source the colliery companies can exploit this fund to their heart's content, and they are doing it."

There were 84 "necessitous undertakings" in the British coalfield to which approximately £4,500,000 had been paid from the fund.

Men sent home

This exploitation was not to be compared with the exploitation which was going on in the payment of the guaranteed wage to men when work was not available and the men were available for work.

"There is not a pit in the whole of the mining industry in the British coalfield," he declared, "that is not exploiting that fund in order to reduce their costs of production, and in order to make at those collieries which are not necessitous undertakings the highest possible profits."

He instanced two occasions on which, he said owing to shortage of coal waggons, men were sent out of the pit and from the surface because, had they been left down the pit, their wages would have had to be paid by the colliery company and by sending them home they could recover by applying to the Guaranteed Wages Fund.

"Inefficient"

The public were paying 8s. a ton on the price of coal to guarantee this fund which was being exploited by the coalowners for their own purposes.

"I am not satisfied," he added, "that the Ministry of Fuel's check

Mopping up the enemy in Arakan

From STUART EMENY
News Chronicle War Correspondent

SOUTH-EAST ASIA H.Q., Thursday.

VICTORY is in sight for the Fourteenth Army in its jungle battle with the Japanese on the Arakan coast of Burma.

In the closing stages of the battle our troops are fast mopping up the enemy. Already something like 3,000 Japanese, or about half the force which originally penetrated behind our lines north of Buthidaung, have been killed or wounded.

The enemy are being driven from the Ngakyedauk pass, on which they have had a road block, and it should be clear again for mechanised traffic within the next few days.

Closing in

Troops of the Seventh Indian Division east of the Mayu range and of the Fifth Indian Division west of it are now converging on the top of the pass.

British and Indian wounded are being evacuated by baby aircraft from under the very noses of the Japanese behind our lines.

At the height of the battle, when British and Japanese forces were fighting in a mosaic of pockets and boxes, tiny two-seater Tiger and Piper Cub aircraft dropped on paddy fields and 60-yard strips cut out of the jungle.

New York, Thursday.—In the ten years following the war, the U.S. will have approximately 500,000 civil airplanes, most of them privately owned, Mr. Charles I. Stanton, Administrator of Civil Aeronautics, predicted here tonight.

They throw the ball back

By the Industrial Correspondent

LEADERS of the coalowners and the miners yesterday discussed the Government's proposal that they should get together to consider a general overhaul of the industry's wage structure.

Both sides agreed that the Government's overture was too vague, and they decided to ask Major Lloyd George, Minister of Fuel, to define more clearly what the Government means by the "wage structure of the industry."

In other words, the owners and miners have thrown the ball back to the Government.

E-boat sunk —and convoy raid fails

DETERMINED attempts by several groups of E-boats to attack a small convoy off the East Coast early yesterday were driven off by light naval forces.

Poles are cri[tical of] Mr. Chur[chill]

THE "Dziennik Polski," an organ [...] ment in London, said yesterday:

"The paragraphs in Churchill's T[...] were devoted to Poland were inspire[d ...] for the Polish nation—a friendship a[...] lishing a strong and independent Poland as 'one of the leading Powers in Europe.'

New danger

"The Prime Minister's sincere and undoubted desire to protect Poland from the great new danger threatening her and to open ways for her towards unlimited independent existence was also evident from those paragraphs.

"The principle of real independence for the Polish State is undoubtedly a definite principle of British policy and of that policy's chief steersman.

"On the other hand, as far as the ways towards securing Poland's actual independent existence are concerned, there is a marked difference on important points between Churchill and the British Government on the one hand and the Polish Government on the other. The assertion of

Poles are criticising Mr. Churchill

THE "Dziennik Polski," an organ of the Polish Government in London, said yesterday:

"The paragraphs in Churchill's Tuesday's speech which were devoted to Poland were inspired by basic friendship for the Polish nation—a friendship aiming towards establishing a strong and independent Poland as 'one of the leading Powers in Europe.'

New danger

"The Prime Minister's sincere and undoubted desire to protect Poland from the great new danger threatening her and to open ways for her towards unlimited independent existence was also evident from those paragraphs.

"The principle of real independence for the Polish State is undoubtedly a definite principle of British policy and of that policy's chief steersman.

"On the other hand, as far as the ways towards securing Poland's actual independent existence are concerned, there is a marked difference on important points between Churchill and the British Government on the one hand and the Polish Government on the other. The assertion of Britain's foreign policy was guided by Lord Curzon himself. . .

"It is on the basis of these historic facts and these Allied documents that the Polish Government has taken the determined stand of refusing the so-called Curzon Line as the future Polish-Soviet frontier. The Polish Government will hold fast to this attitude.

Real peace

"As in the further paragraphs of his speech Churchill spoke of securing Russia's western frontiers and considered that in that respect Russian demands would not exceed the bounds of what is 'rational and just,' we must point out not only that the whole of Poland—which is so very anti-German—protects Russia from Germany, but also—and this we stress most emphatically—that if Poland is deprived of almost half her territory and nearly 11 million of her people to the advantage of another of the United Nations, it cannot be regarded by the Polish people as a just act or a rational solution of Polish-Russian relations on a really peaceful and permanently

AMERICAN DIARY by *Robert Waithman*

World team is favoured

WASHINGTON, Thursday.

THIS is the present state of mind of the American people on U.S. membership in a world organisation after the war.

By far the largest majority (68 per cent.) want to see the country take an active part in international organisation.

Only a few (less than 13 per cent.) take the Isolationist or keep-away-from-foreign-countries view, and still fewer (less than eight per cent.) put their faith in a separate alliance.

Britain stands highest on the list of countries Americans want as fellow-members of an organisation. Forty per cent. of the people think a few countries—the U.S., Britain, Russia and China—should have a bigger say than others in whatever post-war organisation emerges.

But 50 per cent. would let all member-coutries have the same say.

These are skeleton results of the latest "Fortune" magazine poll throughout this country.

Shangri-La

OBSERVE how fiction merges into real life. There was James Hilton, an English novelist.

One day, casting around for a name for a fanciful land he had invented, he devised Shangri-La.

His story about Shangri-La, "The Lost Horizon," was published, and among those who read it was President Roosevelt. War began.

American planes bombed Tokio, and the President, asked from where they had taken off, said, on the spur of the moment, "From Shangri-La."

"Hour may come"

MUCH later, when the Japanese could gain no benefit from the knowledge, it was revealed that the planes had flown from the deck of the aircraft-carrier Hornet.

Then the Hornet was sunk. Thousands of Americans bought war bonds and the money went to build a new carrier to take her place. She slid down the ways at Portsmouth, Virginia, today.

Her official name was Shangri-La.

The Governor of Virginia said at the launching: "I hope the hour may come, as the thunder of aerial battle rolls across Tokio, when we shall be able to say 'the planes that struck the mortal blow came from Shangri-La'"

The South protests

IN the same philosophical mood: In the threadbare thirties I wrote something from Lancashire saying how bitterly cotton people were complaining over the fact that idle mills were being dismantled and spindles sold and shipped to India where they would kill Lancashire's own markets.

Today, from Charlotte, North Carolina, there comes the precisely similar complaint of Southern American cotton men

They are protesting against a proposal that spindles shall be shipped to China to help rehabilitate that country. The American argument is the Lancashire argument, with differences only of phrasing. We are willing to supply milk to China, they say, but not to give her the cow.

Two objectives

WHAT the British and American raids are now seeking to do, Mr. Patterson, Under-Secretary for War, implied at a Press conference today, is to capture command of the air over Europe.

Two objectives, he said, are to hit the Nazi fighter formations in the skies and destroy the fighter factories on the ground.

We are making progress, since German resistance is declining as attacks continue, Mr. Patterson noted. The air war, however, is still in an early stage.

Losses have not been light, but they are "not severe in view of results." In the last three days American planes from Britain have destroyed 310 German aircraft and American planes from Italy have added another 33 to the total.

That pistol

ONLY recently have the strains of the song "Lay That Pistol Down, Babe" ceased to come by night and day from American radio sets.

But perhaps it will have a bigger future yet as the motto of delegations from countries which are going to negotiate over the oil of the Middle East.

"Life" magazine today thus concludes an editorial on the proposed American Government pipeline across Saudi Arabia: "Like Britain's Anglo-Iranian and Russia's State Oil Trust, it is a pistol carried to a poker game.

"When the players all have identical interests in the rules, or when the stakes are lower, we can all throw our pistols away. But not yet."

The lessons

MANY honest Americans are honestly troubled over the question whether the victorious democratic nations should control teaching in Nazi and Japanese schools after the war.

The case for control was well put last night in an address before the American Association of School Administrators. Dr. Stoddart, Superintendent of Philadelphia schools, said any international Office of Education must have powers to supervise the school programmes of Axis countries.

Not to make such provision "would be as foolish as to leave their armament factories in good working order."

1245

THIS PAGE IS DECLASSIFIED IAW EO 13526

says an Admiralty report.

During one of four short actions with the enemy the destroyer H.M.S. Garth (Capt. C. R. L. Parry, R.N.) obtained repeated hits on one E-boat, which was seen to blow up.

A group of E-boats, intercepted by light coastal forces, retired at high speed on being engaged.

Part of the E-boat's bows, pieces of wreckage, and a German ensign were picked up by H.M. ships and brought into harbour. We suffered no damage or casualties.

SWEDISH AID FOR P.O.W.

Count Folke Bernadotte, Vice-President of the Swedish Red Cross and a nephew of the King of Sweden, stated yesterday that Sweden is prepared to look after sick and wounded of both sides until the end of the war, if there is no further exchange of prisoners.

"Should further repatriation not come about," he said, "the Swedish Red Cross offers hospitality to sick and wounded prisoners until exchange is possible or, if necessary until the end of hostilities."

Asked if the Swedish Red Cross had taken any steps concerning prisoners under Japanese control, Count Bernadotte replied: "Not so far." He added that his organisation worked in close co-operation with the Swiss.

upon the payment of this money ... efficient or sufficient.'"

Mr. Sloan (Lab., S. Ayrshire) maintained that there was more output lost through men being denied work which they were capable of undertaking than there was from all the stoppages. There should be some guarantee that the fund was to be tightened up before the 3s. a ton was added to the price of coal.

Mr. Tom Smith, Parliamentary Secretary, Ministry of Fuel, said the Coal Charges (Amendment) Order increased coal charges from 5s. to 8s. a ton and was made concurrently with the average increase of 3s. in the price of coal granted with effect from February 1.

Check on abuse

The Order was approved before the recent award of Lord Porter and was not intended to cover that award, so that as time went on it might be necessary still further to increase coal charges.

It was true there was not a subsidy and that the price was being borne by the consumer. The extra 3s. was needed because there were additional costs to be met from the Coal Charges Account.

"Instructions have been sent to regional controllers to put their production and labour directors to an examination where there is the slightest possibility of the Essential Work Order being abused," said Mr. Smith.

this truth is painful for every Pole: nevertheless it cannot be concealed.

The past

"While speaking of the past, the following facts should be stated: The Resolution passed by the Supreme Council of Allied Powers on December 8, 1919, concerning the temporary eastern frontier did not deal at all with the territory of the Galicia of that time; it began at the point where the former Russian and Austro-Hungarian frontiers had met and thus affected only former Imperial Russian territories.

"As Churchill especially raised the subject of Vilno, it should be mentioned that in the Vilno area the population shows either an absolute or a relative Polish majority.

"Above all tower the facts that on March 15, 1923, the Council of Ambassadors took a resolution on behalf of Great Britain, France, Italy and Japan recognising the whole eastern frontier of Poland and that the U.S.A. did the same on April 5, 1923. The Polish eastern frontier was recognised in this way at a time when Great

notably at Deipholz, near Bremen, bombed.

Tuesday: The attack continued in strength against important units of the aircraft industry at Bernberg, Oschersleben and Halberstadt. At the same time the Fifteenth A.A.F., operating from Italy, made a co-ordinated assault against factories at Regensberg.

Wednesday: The Fifteenth A.A.F. bombed factories at Steyr, Austria, which contributed to aircraft production.

Stockholm radio reported last night that an American Flying Fortress flew in over the coast of Blekinge at noon yesterday.

Anti-aircraft guns opened fire, causing it to change course. Over Southern Sweden it gave distress signals and shortly afterwards landed.

The crew is reported to be unhurt.

Reports last night of the early raid by Marauders indicate that they made their deepest penetration into Europe.

One formation drove within 10 miles of the German border to attack Deelen, a fighter base near Arnhem, while other waves were bombing the fighter airfield at Leeuwarden and the fighter and bomber base at Gilze-rijen.

There were no Allies losses.

R.A.F. Spitfire pilots who flew with the Marauders to Leeuwarden reported a column of smoke 10,000ft. into the air after the medium bombers scored hits on two oil tanks.

OSCAR R. HOBSON, City ...

THE Stock Exchange, whose performance ... affected this week by the more sombre to... war statement, yesterday came under a ne... namely, the renewal of air attacks on London...

This made itself felt in lower quotations for the shares of London property companies, for various public utility stocks and for the shares of all entertainment enterprises. Movements were nowhere appreciable though none the less significant. In the industrial market most of the attention was centred on anticipations of the Courtaulds dividend and profit figures. The market did not harbour undue hopes of a larger dividend and shares were marked down by 6d. to 53s. 6d. during the day.

It was announced well after the close of the market that the final dividend on the Ordinary stock would be 5 per cent. actual, making 7½ per cent. for the year, thus repeating the distribution for 1942. The profits for 1943, after taxation, are returned at £1,133,000, or about £130,000 lower than the figure for 1942.

The main exception to the prevailing Stock Exchange weakness was provided by mining markets, the dominant factor here being the South African Budget, which Mr Hofmeyr, the Minister for Finance, opened yesterday. The main points of interest to investors on this side are the taxation on gold mines and on the diamond industry. The special tax on gold mining profits is to remain unchanged at 22½ per cent. That had been generally anticipated and Mr Hofmeyr pointed out during the course of his speech that gold mining taxation had about reached its economic margin. He added that in estimating the revenue from gold-mining taxation for the coming year he had to allow for a further reduction of £1,400,000, not in consequence of any concession to the industry, but because war conditions inevitably affected its output and profits. That decline in profits, added Mr. Hofmeyr, should prove temporary and the figure he gave provided no basis for pessimistic conclusions as to the future of the industry.

By contrast with gold the diamond industry has been booming, and Mr.

Mr. Sloan (Lab., S. Ayrshire) maintained that there was more output lost through men being denied work which they were capable of undertaking than there was from all the stoppages. There should be some guarantee that the fund was to be tightened up before the 3s. a ton was added to the price of coal.

Mr. Tom Smith, Parliamentary Secretary, Ministry of Fuel, said the Coal Charges (Amendment) Order increased coal charges from 5s. to 8s. a ton and was made concurrently with the average increase of 3s. in the price of coal granted with effect from February 1.

Check on abuse

The Order was approved before the recent award of Lord Porter and was not intended to cover that award, so that as time went on it might be necessary still further to increase coal charges.

It was true there was not a subsidy and that the price was being borne by the consumer. The extra 3s. was needed because there were additional costs to be met from the Coal Charges Account.

"Instructions have been sent to regional controllers to put their production and labour directors to an examination where there is the slightest possibility of the Essential Work Order being abused," said Mr. Smith.

...this truth is painful for every Pole; nevertheless it cannot be concealed.

The past

"While speaking of the past, the following facts should be stated: The Resolution passed by the Supreme Council of Allied Powers on December 8, 1919, concerning the temporary eastern frontier did not deal at all with the territory of the Galicia of that time; it began at the point where the former Russian and Austro-Hungarian frontiers had met and thus affected only former Imperial Russian territories.

"As Churchill especially raised the subject of Vilno, it should be mentioned that in the Vilno area the population shows either an absolute or a relative Polish majority.

"Above all tower the facts that on March 15, 1923, the Council of Ambassadors took a resolution on behalf of Great Britain, France, Italy and Japan recognising the whole eastern frontier of Poland and that the U.S.A. did the same on April 5, 1923. The Polish eastern frontier was recognised in this way at a time when Great...

The Diplomatic Correspondent writes: If this "semi-official" comment in the leading Polish daily newspaper published in London truly reflects the views of the Polish Government in exile, then it must be said that any hopes for a settlement of the dispute between it and the Soviet Government are very faint indeed.

Nor does the tone of its references to Mr. Churchill's speech reflect very much gratitude for the unceasing and unselfish efforts he and Mr. Eden have made during the last few weeks to heal the breach between the Soviet and Polish Governments.

Mr. Eden sees Polish Minister

The Polish Foreign Minister, Mr. G. Romer, called upon the Foreign Secretary, Mr. Anthony Eden, yesterday and presented the views of his Government on Mr. Churchill's speech.

Grandfather wins the A.F.C.

The R.A.F.'s oldest pilot on regular flying duty, Sqdn.-Ldr. S. R. Sunnucks last war submarine commander, who earned his Wings in the R.A.F. after he had been placed on the Navy retired list, has been awarded the A.F.C.

He is 52 and a grandfather. He has taught more air crew members practical navigation than any other man.

ONE-MINUTE SERMON

They . . pulled away the shoulder

Zechariah 7.11

GOD'S charge against His priests and people was that while observing their ceremonial fasts they gave Him the cold shoulder. Our colloquialism exactly interprets the Bible phrase.

Read the whole chapter and compare it with Isaiah 58.1-12, contrasting the last four verses of each portion.

Never surely was timelier lesson. This year of all years, Lent should be a time of intense spiritual preparation. A world at war is moving towards Easter. And the greatest by far of its many perils is that its plans for resurrection may cold-shoulder its risen Lord.

Hugh Redwood

S. African Budget

OSCAR R. HOBSON, City Editor

THE Stock Exchange, whose performance has been somewhat affected this week by the more sombre tones of Mr. Churchill's war statement, yesterday came under a new adverse influence, namely, the renewal of air attacks on London.

This made itself felt in lower quotations for the shares of London property companies, for various public utility stocks and for the shares of all entertainment enterprises. Movements were nowhere appreciable though none the less significant. In the industrial market most of the attention was centred on anticipations of the Courtaulds dividend and profit figures. The market did not harbour undue hopes of a larger dividend and shares were marked down by 6d. to 53s. 6d. during the day.

It was announced well after the close of the market that the final dividend on the Ordinary stock would be 5 per cent. actual, making 7½ per cent. for the year, thus repeating the distribution for 1942. The profits for 1943, after taxation, are returned at £1,133,000, or about £130,000 lower than the figure for 1942.

The main exception to the prevailing Stock Exchange weakness was provided by mining markets, the dominant factor here being the South African Budget, which Mr Hofmeyr, the Minister for Finance, opened yesterday. The main points of interest to investors on this side are the taxation on gold mines and on the diamond industry. The special tax on gold mining profits is to remain unchanged at 22½ per cent. That had been generally anticipated and Mr Hofmeyr pointed out during the course of his speech that gold mining taxation had about reached its economic margin. He added that in estimating the revenue from gold-mining taxation for the coming year he had to allow for a further reduction of £1,400,000, not in consequence of any concession to the industry, but because war conditions inevitably affected its output and profits. That decline in profits, added Mr. Hofmeyr, should prove temporary and the figure he gave provided no basis for pessimistic conclusions as to the future of the industry.

By contrast with gold the diamond industry has been booming, and Mr. Hofmeyr pointed out that last year the sales of stones exceeded £20,000,000. This is easily a record. The producers, therefore, can stand some additional taxation, and the special war-time contribution which they have to pay over and above the basic taxation has been raised from 3s. to 4s. in the £. This is expected to produce additional revenue of £180,000, and was naturally regarded as "very small beer" by the markets in diamond shares. These were active yesterday. De Beers Deferred rose by 7s. 6d. to £13, Consolidated Diamonds by 2s. to 36s. 6d. and Anglo-American Investment Trust by 2s. 6d. to 51s. 3d. The rest of the Budget had little direct interest for London though some notice was taken of Mr Hofmeyr's proposal to reduce the super-tax limit from £2,000 to £1,775. Here is a reminder that our own Chancellor of the Exchequer still has similar shot in his locker.

Out of total expenditure of £180,000,000 of which £102,500,000 is for defence, South Africa will borrow only £58,000,000. The expenditure for next year will not only meet South Africa's current requirements for defence, but also wipe out certain liabilities to the British Government in respect of aircraft and other war material and for the maintenance of South African Forces in North Africa.

8 MILES FROM RUMANIA

Russians Sweeping On To The Pruth

PROSKUROV TAKEN BY STORM

'Soviet Troops Breaking Into Kamenets And Nikolaev

On the First Ukrainian Front the Russians are within 70 miles of Ruthenia, the Czechoslovak province seized by Hungary. Soviet troops on the Second Ukrainian Front are in sight of the River Pruth, and the Third Ukrainian Army is fighting in the outskirts of Nikolaev

The Red Army is now only eight miles from the frontier of Rumania and its guns, said Moscow Radio last night, are firing on the foothills of the Carpathians.

The Soviet communiqué announced last night the capture of 50 places in Bessarabia, including Stolnychany, Bratuseni and Edinita, respectively eight, 12 and 13 miles from the upper reaches of the River Pruth.

These captures were made in the area below Mogilev Podolsk. Fifty miles higher up the river the Russians have reached the Dniester on a front of 50 miles.

Here they are fighting in the outskirts of the important junction and crossing of Kamenets Podolsk, 25 miles north-east of Cernauti, which guards Ruthenia, the province that Hungary seized from Czechoslovakia.

Sixty miles to the north-north-east of Kamenets Podolsk, the Russians yesterday captured Proskurov and other places between the two towns. They have wiped out a large salient on the eastern bank of the Dniester and have trapped many Germans—probably large forces—that could not escape.

An Order of the Day by Marshal Stalin last night said that Marshal Zhukov's

Last night's news from Moscow may be summarised as follows:

Proskurov: After taking the town Soviet troops took more than 150 places in the area.

Kamenets - Podolsk: Russian troops have closed in on the town and are fighting in its outskirts. In this area the Red Army has reached the Dniester on a front of 50 miles.

West and South of Mogilev-Podolsk (in Bessarabia): The Russians occupied the district centres

Two Envoys Dismissed By Budapest

From Our Own Correspondent

STOCKHOLM, Saturday.

Dr. Reviczky and M. Ambro, who resigned their posts as Hungarian Ministers in Stockholm and Madrid, have been "deprived of their Hungarian citizenship" by the new Hungarian cabinet, reports the German Overseas News Agency to-night.

Though he refuses to recognise the quisling regime in Budapest, Dr. Reviczky indicated to-day that he has no intention of working for the formation of an exile Hungarian Government.

"The question of a legal Government can wait until Hungary is again free," he declared. "Our duty is to work to make the country free, and not amuse ourselves forming governments."

The Hungarian Ministers in Berne and Lisbon have also announced their refusal to join the quislings.

RESISTANCE REPORTS

Reports of resistance in Hungary continue to reach Stockholm. One report has it that in some districts fighting became exceedingly bitter, patriots checking German progress when the sporadic fighting of the first few days became organised.

The Wilhelmstrasse still insists that there is no question of the occupation of Hungary. But

ALLIES CLOSING ON BURMA RAILHEAD

FROM OUR SPECIAL CORRESPONDENT

CALCUTTA, Saturday.

Allied troops are steadily closing in on Myitkyina, the Japanese railhead and airfield in Burma, about 250 miles north of Mandalay.

To-day's South-East Asia Command communiqué reveals that Brig.-Gen. Merill's American and Chinese force operating in the Mogaung Valley have occupied Shaduzup.

They are now within 45 miles of Mogaung, which lies immediately west of Myitkyina, on the railway running south to Mandalay.

Stiff pockets of Japanese resistance are being reduced in the Mogaung Valley, where the battle is now in its fifth day.

Fighting has ranged from sustained artillery duels to fierce hand combat. The Japanese are making extensive use of artillery in an attempt to halt the Allied advance.

At the same time a British commando force of Gurkhas and Kachin levies is advancing from the north towards Myitkyina, down the road from Sumprabum.

The Kachins, who inhabit these hills in the extreme north of Burma, are first-class troops, from whom the Burma rifle regiments are largely recruited

Two Allied columns are closing in from the north on the railhead of Myitkyina, below which airborne troops are reported to

FIERCEST BATTLE YET FOR BERLIN

Air Defence Stronger

Bomber Command's attack on Berlin on Friday night, the first major raid at night on the city since February 15, led to the fiercest battle yet fought for the German capital.

For its defence the Germans, says the Air Ministry, had brought up every gun, searchlight, and fighter they could muster. From the reports of the R.A.F. crews it seemed that the enemy had used the pause in the offensive to strengthen the capital's defences.

The raid, in which more than 2,500 tons of high explosive and incendiary bombs were dropped, was the heaviest so far made in the Battle of Berlin.

Altogether more than 1,000 aircraft of Bomber Command were over the Reich during the night, other objectives being Kiel and targets in West Germany. Seventy-three planes are missing.

Only once before has the R.A.F. paid so heavy a price. That was on the night of February 19, when Leipzig was the main target for over 1,000 planes, of which 79 were lost.

The German News Agency claimed yesterday that Nazi night fighters scored their biggest success of the war on Friday night. It said that "well over a quarter" of all the raiding planes were destroyed. The German communiqué claimed that 112 four-engined bombers were shot down.

MASSED DEFENCES

The attack on Berlin was made by Lancaster and Halifax bombers.

"From the moment we crossed the enemy coast," one Lancaster pilot said, "massed guns and searchlights opened up on us. Fighter flares were floating down, sometimes singly and sometimes in twos and threes. There was no question of foxing. We were going right into the den last night, and we knew it and they knew it."

There was one dense belt of searchlights which extended for more than 20 miles. "The glare was so intense," said a Halifax rear-gunner, Flt.-Sgt. M. Barling, an Australian, "that I daren't look down on the capital. I was afraid of being dazzled and losing my night vision just at the critical moment. I kept my eyes rigidly on the sky.

"The bombs went down, we turned for home, and only then did I allow myself to look down. There was a large area carved out of the city by the red, angry fires which were concentrated round the ground markers dropped by the Pathfinders; the fires were spreading and getting fiercer all the time."

Biggest Week Of Raids

The past week has seen the greatest air attack in history. Nearly 7,000 sorties were flown over Germany and France by Allied planes based in Britain during the 72 hours to yesterday morning.

WEDNESDAY

Day (Americans).—Berlin: 1,600 planes; 1,400 tons.

Night (R.A.F.).—Frankfurt: Over 1,000 bombers; 3,000 tons.

THURSDAY

Day (Americans).—Hamm, Münster, Brunswick, and other targets; 1,600 planes.

Night (R.A.F.)—Laon and Lyons, France; and Dortmund, Germany.

FRIDAY

Day (Americans).—Schweinfurt and Frankfurt, Germany, and airfields in France; more than 1,000 planes; 1,000 tons.

Night (R.A.F.).—Berlin and Kiel; over 1,000 bombers; 2,500 tons.

Friday night's raid on Berlin was the fifth time in the 72 hours that more than 1,000 planes had struck at Germany in single attacks.

DAY RAIDERS MEET MORE OPPOSITION

Crews of Marauder medium bombers of the United States Ninth Air Force which continued the daylight attack on Northern France yesterday met the most intense fighter opposition encountered for several weeks.

The Marauders, escorted by Thunderbolt fighters, attacked the railway yards at Hirson, near the Belgian border, a key point for supplies moving from [illegible]

Political Notes

ATLANTIC CHARTER REVIEW

Land Policy: A New Register Soon: Equal Pay

By Our Political Correspondent

Apart from the over-riding tension of impending operations, three topics are specially in the minds of Members of Parliament. They are land policy as a fundamental of planning, the Atlantic Charter as a basis of post-war international settlement, and ordered demobilisation as an essential of reinstatement in civil life.

In his speech in the House of Lords last week, Lord Beaverbrook was far from satisfying the critics of delay in the announcement of the Government's land proposals. I understand that these were before the Cabinet a few days ago, and are still under consideration. A suggestion that Ministers are divided on them is denied in authoritative quarters. There is said to be unity on principles, but extreme difficulty in putting the principles into legislative practice.

Both Houses are now on the Government's track on this issue; and if last week's promise of proposals after Easter is not redeemed within a reasonable time after that date there will be trouble.

Allied Consultation

The Atlantic Charter may be the subject of debate in the Commons after Easter in the light of Mr. Churchill's reference to it in the House last week. He said that as changing phases of the war succeed one another some further clarification of the position under the Charter will be required; and that this must be the subject of renewed consultation among the principal Allies. The Charter stood, he added, as a declaration of the spirit and purpose in which its signatories were waging this war, and it implied no pact or bargain with our enemies.

It is the qualification in the latter part of this sentence which arouses a section of the House of Commons.

Forty or fifty of the seventy M.P.s who put down a provocative motion, which the Prime Minister regarded as a vote of censure, met privately in the House last week and decided **to seek a debate either on a Supply day or on an innocuous motion.**

Americ... [illegible] ...ition.

Front carried Proskurov by storm. The place is described as "a large railway junction and powerful enemy stronghold."

With Tarnopol, on the Lvov railway, it formed a "bolt" position guarding the approaches to the Carpathians.

100-MILE WEDGE

Stand on Pruth Unlikely

These latest gains mean that the Red Army has now thrust a wedge of 100 miles between the northern and southern parts of the German armies of the south.

The Moscow correspondent of Reuter stated yesterday that the Germans were not expected to stand on the Pruth and may have to fall back to the River Seret, running west of Cernauti and Jassy to the Danube.

LOWER BUG CROSSED

Threat to Nikolaev

To the south-east, the Russians are now within two miles of Nikolaev, the big port on the River Bug estuary and a large outpost of Odessa.

Berlin reports said that Gen. Malinovsky's troops crossed the Lower Bug in the Nikolaev sector.

other localities, including Stolnychany, eight miles from the Pruth, and places outflanking the big junction of Balti, in which fighting was reported on Friday.

South-west and South of Gaivoron Soviet troops occupied more than 40 places, and are closing in on Balti.

Nikolaev: Overcoming stubborn enemy resistance and counter-attacks the Russians captured three powerful strongpoints and several railway stations, one within two miles south-east of Nikolaev.

GUERRILLAS IN CARPATHIANS

RENEWED ACTIVITY

German troops are being sent to the north-eastern and eastern frontiers of Czechoslovakia to occupy the Carpathian passes, now that the Red Army is less than 70 miles away from Ruthenia, which was annexed by Hungary.

News from Czechoslovakia, received in London yesterday, was that in Slovakia and Ruthenia guerrillas are coming into the open. They are attacking German communications through the passes.

Himmler has visited Bratislava to prod the puppet Slovak Government into taking more effective measures against these partisans. Reports say that he has ordered the Slovak State Security Police to compile lists of potential partisans who must be "rendered harmless."

GERMAN RESERVES MUST BE DRAINED INTO BALKANS

By BRIG. E. C. ANSTEY, D.S.O.,
"The Sunday Times" Military Correspondent

The Battle of the Ukraine, stretching from the distant approaches to Lvov away to Nikolaev, is taking a new shape and a composite character.

Bitter street fighting rages in Tarnopol, probably in Nikolaev and possibly in Balti; on the road to Cernauti the German retreat is almost a rout; between the Dniester and the Bug Marshal Koniev builds up his strength and expands his bridgeheads against a reinforced enemy; on the Bug one suspects that Gen. Malinovsky is getting his breath for a great surge forward across the river to Odessa, possibly without waiting for the fall of Nikolaev.

Thus in the centre and south the pursuit, which has achieved immense destruction in men and material to the German armies, has come to an end and is again a fighting advance; on the right wing there is an offensive towards Lvov and a pursuit towards Cernauti; while on the extreme left wing the storming of Nikolaev is imminent.

There are other intriguing features in the intricate pattern of this tremendous battle. Tarnopol is almost surrounded and the escape of its garrison is already doubtful.

Finally, a Russian line from Pervomaisk to the Dniester at right angles to the Bug, facing south, suggests a combined operation with Gen. Malinovsky's men on the Bug aimed at Odessa, which might repeat the German disaster to their extreme right wing north of Kherson but on a larger scale.

To all this remarkable tale of victory rumour adds an unconfirmed story of Russian paratroops landing on the Carpathian passes. If this is true, it is a most incredible thing that the Germans should not have got there first. For the passes were one of the prizes for which Germany occupied Hungary.

Therefore if paratroops were dropped it seems very unlikely that they were in sufficient numbers to secure the passes or hold them until Marshal Zhukov's main columns could relieve them.

A fair deduction from the run of the battle and from Germany's action in Hungary and Rumania is that:

(1) The magnitude of the defeat took the German High Command completely by surprise;

(2) That they are determined to hold Rumania and the Ploesti oilfields;

(3) That to do this they must hold the River Pruth and the Carpathians;

(4) That, in consequence, they must secure their communications behind those lines by holding them themselves to avoid delays, misunderstandings, friction and treachery;

(5) That as a further consequence Greece and Jugoslavia on their Balkan flank and rear become of great importance and a potential danger as the spring comes on and that, therefore, more troops must be poured from somewhere or other into the Balkans

DESPERATE EFFORT

All these new demands for troops have arisen in the last three weeks as a result of the Ukrainian catastrophe. Consequently German plans in Europe needed some change. The drain on their reserves could be met only in one of two ways.

Hitler could evacuate certain occupied countries such as Finland, Norway or Southern Italy, which might save 30 divisions; or he could abandon his offensive plans against an Allied landing in the west and revert to a defensive plan. Either of these methods would confess defeat and hasten his downfall.

Thus Germany is condemned, willy-nilly, to fighting it out in the outworks in the desperate hope that we, in Gen. Montgomery's words, shall drop the rope.

by reporting that five concentration camps for political prisoners have already been set up in Hungary.

With the occupation of Hungary and Rumania now accomplished facts, the occupation of Bulgaria is believed to be not far off. Turkey is reported to be beginning to feel uneasy about her position.

HITLER IGNORED ARMY'S ADVICE

HUNGARY'S FOOD

ZURICH, Saturday.

Hitler ordered the invasion of Hungary against the advice of his generals, according to a diplomatic report reaching here from Germany.

Thousands of "specialists," who immediately requisitioned all food supplies throughout Hungary, accompanied the German occupation forces, says a report from Rumania.

In Germany the public received the news of the occupation with the utmost apathy. People shrugged their shoulders, implying, "as if that will make any difference," and took no further interest. This, an informant says, is typical of the German public's reaction to all war news nowadays. The only events which seem to touch them personally are air raids.—Reuter.

RAID ON SOFIA

Sofia, the Bulgarian capital, was again raided on Friday night, the German News Agency announced yesterday. No details of the attack have come so far from Allied sources.

Berlin also announced that the Bulgarian Parliament, in session for five days, had heard a statement on home and foreign policy, and had passed a law reorganising the army.

SIR F. WALL DEAD

40 YEARS WITH F.A.

Sir Frederick Wall, former secretary of the Football Association, died last night at his home at Sutton, Surrey. He was 85. He had been in poor health for the past few years.

A football enthusiast from his youth, when he kept goal for a now defunct London club, the Rangers, Sir Frederick became a member of the London F.A. in 1881.

After representing Middlesex on the Football Association Council from 1891, he was appointed secretary in 1895. At that time the membership numbered about 1,000; by the time he retired in 1934 it had reached 750,000.

In 1929 a testimonial fund to him was organised under the patronage of the Prince of Wales, and in the following year he was knighted. He was also presented with a gold medal from the United States F.A. in recognition of his services to the game.

On his retirement Sir Frederick received a grant of £10,000 from the Football Association in recognition of his services as secretary.

Although a staunch friend of the professional player, he always believed that football must in the main be an amateur sport.

Sir Frederick was a founder of the British Olympic Association and helped to found the Referees' Association, of which he became president. He is survived by Lady Wall.

Until he became confined to the house, Sir Frederick regularly attended football matches, and the Arsenal club, of which he was elected a director, still has two seats in its stand bearing his name.

kyina area, which is believed to be the division that captured Singapore, is in a dangerous position, with its rear th[illegible]atened by the airborne troops which landed in the Katha region two weeks ago.

It is reported that these airborne troops have already cut the Mandalay-Myitkyina railway in the vicinity of Indaw and Mawlu.

BATTLE FOR ROAD

On the Manipur front, about 150 miles to the south-west, the Japanese are attempting to isolate and destroy the British and Indian forces covering our base at Imphal. Heavy fighting is taking place in this jungle country on the Indian border, where the road runs south to Tiddim.

The Japanese have followed their usual practice by descending on the road at a number of points and setting up blocks in their effort to isolate our forces. The latter are fighting back strongly, not only on and near the road itself but in the areas bordering it.

The defensive box system, one of the keys to our recent victory in Arakan, is again being used to counter Japanese tactics, and at the moment certain British and Indian troops are in a selected tactical area, being supplied from the air.

The Japanese forces are being severely punished at every stage of their advance. Whenever they bump into one of our outposts or strong-points they receive a heavy blow.

In one brilliant delaying action Indian troops of the Frontier Force Regiment caused havoc among the recklessly advancing Japanese before withdrawing under cover of carriers. The enemy do not seem to have realised how much we have learned of the art of jungle fighting, for they are using the old, familiar moves and "jitter" tactics.

JAPANESE GUESSING

That the Japanese are often guessing is shown by several attacks they have made on positions long since vacated by us. Once they put down an artillery barrage on a deserted post, and on another occasion a company marched in to attack our forward troops and found themselves in a carefully laid trap

On the Arakan front fighting also continues, with our troops striking to eliminate the remaining enemy strong-points in the Maungdaw-Buthidaung area.

BLACK-OUT: 7.53 P.M. TO 6.17 A.M.

LATE NEWS

R.A.F. OFFICERS IN PLANE CRASH

Wing-Cmdr. Gaubert, British Air Attache to Colombo, three W.A.A.F. officers, and an R.A.F. squadron leader were killed in an air crash in Florida, British Embassy in Washington announced last night.

DEATH PENALTY IN PALESTINE

Death sentence was reintroduced in Palestine yesterday for series of offences which since 1940 have been punishable only by life imprisonment. Offences include discharge of firearms, deposition of bombs and explosives, carrying firearms, ammunition, or bombs, and interference with or damage to transport, water, electricity, or telephone services.

CORVETTE LOST

Admiralty announced that corvette H.M.S. Asphodel has been lost. Lt. Halliday, commander, is missing, presumed killed.

GERMANS GET MORE TANKS INTO CASSINO

From **JAMES McDOWALL,**
"Sunday Times" Special Correspondent

ALGIERS, Saturday.

The Cassino battle seems to have slackened slightly and there is no specific mention here to-day of any Allied attacks. Enemy opposition is described as still "fairly stiff."

The Germans have got three more tanks near the Continental Hotel—where two have already been reported destroyed—and these have been engaged by our artillery and tanks. Both this hotel and the Hotel des Roses remain in enemy hands.

Enemy harassing fire continues and Allied artillery and mortars have been busy on counter-battery work, starting several fires in German positions.

Invader pilots are still dropping daily supplies to the beleaguered Allied garrisons holding points on Abbey Hill, and more than 50 tons have been dropped in the past six days.

BEACH-HEAD SHELLING

On the Anzio beach-head, east of Carroceto, Allied guns knocked out two German tanks. A group of five was fired on north-west of Cisterna, and it is believed that all were destroyed. The enemy has renewed heavy shelling of the Anzio and Nettuno areas.

Patrol and artillery activity is reported from the Eighth Army front.

Defence Aided by Secret Passages—Page 5

"NEW ATTACK BY FIFTH ARMY"

ROME REPORT

After claiming that German troops had won back most of the ruins of Cassino, Rome Radio reported last night that the Fifth Army had started a new offensive.

"After regrouping his forces and bringing up reinforcements," it said, "Gen. Clark has resumed his attempt to break through the German defences. The battle is continuing with renewed violence, particularly in the northern and western parts of the ruined city."

Earlier, Berlin Radio had reported that hundreds of bombers and massed artillery have been used in further Allied bombardments of the northern and eastern parts of the town, in preparation for an attack by New Zealand units. The radio claimed that separate tanks which penetrated the German positions were wiped out, 19 by close-range weapons and 23 more by artillery fire.

V.C. TO STAND FOR PARLIAMENT

WING-CMDR. GIBSON

Wing-Cmdr. Guy Penrose Gibson, V.C., who led the R.A.F. Mohne Dam raid last May, and who took part in the first air raid of the war—on Kiel—was yesterday recommended as prospective Conservative candidate for the Macclesfield Division of Cheshire.

The recommendation, made by the Advisory Committee, will be considered soon by a full meeting of the Divisional Conservative Association. The present Member, Mr. Garfield Weston, is not seeking re-election.

V.C. TO STAND FOR PARLIAMENT

WING-CMDR. GIBSON

Wing-Cmdr. Guy Penrose Gibson, V.C., who led the R.A.F. Mohne Dam raid last May, and who took part in the first air raid of the war—on Kiel—was yesterday recommended as prospective Conservative candidate for the Macclesfield Division of Cheshire.

The recommendation, made by the Advisory Committee, will be considered soon by a full meeting of the Divisional Conservative Association. The present Member, Mr. Garfield Weston, is not seeking re-election.

...another pilot said: "They looked as if they were all stationary. It was as if one were looking at an immense forest, with all the trunks of the trees floodlit.

"I got the feeling that nothing in this world could get through them without being spotted; but the fact is that we did get through."

Flt.-Sgt. J. A. Clyne, of Melbourne, a Lancaster rear-gunner, described his trip as "sticky." "Coming back," he said, "we were coned by searchlights for 43 minutes and dropped to as low as 4,000 feet before we got clear. They were shooting at us the whole time, but our aircraft was only slightly hit.

"When we escaped from the searchlights and started to climb, they really began on us with predicted flak. All the guns seemed to be firing at us. It was then that we really got damaged.

"We were all lucky to escape, but the pilot and flight engineer were the most fortunate of the lot. The flight engineer was not standing up as he often does, and a piece of shrapnel passed just where his head would have been. The pilot was wearing a protective jacket when a piece of shrapnel caught his shoulder. The jacket saved him."

HUGE EXPLOSIONS

A pilot who flew in the vanguard of the attack said: "About five minutes after the bombing started there was one of the biggest explosions I have ever seen.

"There was a rush of flame which spurted up to nearly 4,000 feet. Two minutes later it was followed by another one. The first explosion was right in the centre of the target indicators, and the second just to the east of it."

YORKSHIRE PIT PEACE HOPE

OWNERS' OFFER

The strike of 80,000 Yorkshire miners over deductions from their wages for "home coal" is expected to end to-day, following an agreement reached at a meeting in Sheffield last night. It is hoped that work will be resumed to-morrow.

The meeting was attended by Mr. J. H. Hall, president of the Yorkshire Mineworkers' Association, representatives of the owners, and officials of the Ministry of Fuel.

After two hours the agreement was announced in the following statement which was issued to the Press:

"Negotiations to revise the existing agreement shall commence as soon as the men are back at work and any adjustment necessary as regards men in receipt of home coal will be made immediately a revised agreement has been concluded.

"The owners are prepared to meet the Yorkshire Mine-workers' Association on Monday afternoon if there is a general resumption of work on Monday morning."

Immediately after the meeting, miners representatives left for the districts to arrange for meetings of branches to-day. Delegates from 11 collieries, representing 25,000 miners in the Doncaster area, have already decided to recommend acceptance of the owners' offer and an immediate resumption of work.

PREMIER'S BROADCAST

The Prime Minister will speak for about 35 minutes when he broadcasts to the nation to-night.

The broadcast begins at 9 p.m. and will be given on both the Home and General Forces programmes. Home Service news will follow at approximately 9.35 p.m.

BROADCASTING: PAGE 2, COLUMN 4

...escorts, were engaged in fi... battles with German fighters.

Three of the Marauders are missing. Thunderbolt pilots claimed four German aircraft destroyed. The American fighter pilots reported that they could see black smoke billowing up 50 miles from Hirson.

Marauder gunners said that German fighters came down at them out of the sun at a steep angle to attack the last planes in their formation. Two enemy fighters, an Me.109 and an F.W.190, were shot down by Capt. Thomas Montag, of West Bend, Iowa.

NIGHT BOMBERS OUT AGAIN

R.A.F. heavy bombers were out again last night. They began to pass over the East Coast as darkness fell. The force over one area seemed smaller than on Friday night, but planes were going out steadily for an hour, though not all apparently, in the same direction.

At nine o'clock last night the German Radio said: "Several nuisance raiders are flying over north-west Germany in the direction of Central Germany." An hour later the radio said: "Several nuisance raiders now over Central Germany. Other nuisance raiders over Western and South-western Germany."

AMERICANS SINK U-BOAT

The destruction of a German submarine by American destroyers in the Mediterranean in a twilight battle lasting over an hour was announced in Washington by the Navy Department last night.

...that America has come into the war since the Charter was drawn up. The Prime Minister attaches considerable importance to the issues involved, and he may make reference to it in his broadcast to-night.

On the question of demobilisation there is marked reluctance on the part of Ministers to discuss it now.

A NEW LEAGUE OF NATIONS

REPORTED U.S. PLAN

WASHINGTON, Saturday.

Senator Tom Connally, chairman of the United States Senate Foreign Relations Committee, announced to-day that Mr. Cordell Hull, Secretary of State, will seek Congressional aid in drafting a plan for an international peace organisation, to which the United States pledged itself at Moscow.

He understood that the preliminary outline worked out by the State Department contemplated the creation of a body somewhat similar to the League of Nations, but with more power to prevent aggression.

Senator Joseph H. Ball said that he was informed that the State Department had had preliminary talks with Great Britain.

Mr. Cordell Hull to-day complained to newspaper men of the "garbled and inaccurate" accounts published of his confidential conference with Republican members of Congress on American foreign policy.—Reuter.

CITY NOTES

A Policy for Sterling

By NORMAN CRUMP, City Editor

LAST Tuesday Mr. Cordell Hull, in his statement on United States foreign policy, said, "equally plain is the need for making national currencies freely exchangeable for each other at stable rates of exchange." In principle, few people in this country would disagree. Any kind of exchange control is incompatible with London's position as the world's financial centre. Nor can our merchants and manufacturers easily make their long-term plans for the revival of our export trade unless they can have some assurance that the pound will maintain a stable value in overseas markets.

First things, however, must come first. After the war our primary needs will be the reconstruction and rehabilitation of our industries; the promotion and maintenance of full employment; and the provision of an adequate standard of living, including housing, for our own people. If we are to achieve these ends, we must make every effort first to replenish our stock of foreign exchange, and next to reserve it for the purpose of paying for essential imports. Both our internal financial policy and our foreign exchange technique will be governed by these considerations, as well as by our desire to co-operate with other countries for the revival of international trade.

Cheap Money

In the past, the chief instruments for rectifying an adverse exchange position were the raising of interest rates and the restriction of credit at home. Even before the war, these instruments were becoming obsolescent. It is most unlikely that they will be employed in the future. Cheap money will be the basis of recovery finance, as it is of war finance to-day. Credit must be made available in quantities sufficient to foster recovery and maintain employment. The only limiting factor should be the need to prevent internal inflation.

This means that new instruments will be required for regulating our foreign exchange position, and these instruments must be of a type calculated to interfere as little as possible with home economic and financial policy. That is one reason why, even as the Keynes plan admits, some kind of exchange control will be needed after the war.

Case for Control

Radio

By DESMOND SHAWE-TAYLOR

CINEMA and radio having become in our time the rivals of Church and university, we cannot afford to be indifferent to the doctrine and the curriculum which they provide. Their first job, of course, is to entertain us; but in doing so they are bound, for better or for worse, to affect our standards and our values. To a dehumanised, machine-ridden, war-weary generation like ours, the best service they can render is to restore some sense of the variety and richness of human life as it should be and could be lived. All the characteristic forces of the age conspire to crush that sense; war only accelerates the tendency of industrial civilisation to turn us all into robots.

Whatever its shortcomings in other respects, it is the great merit of the B.B.C. that it has been consistently aware of its social responsibilities. It is true that radio is just another machine which can never take the place of original creative labour or thought or play. It is also true that, in many homes and most places of assembly, it is treated purely as a machine: a mere purveyor of non-stop background noise. Nevertheless, this machine contains, paradoxically, the power to counteract the deadening influences of all the other machines. I build great hopes on that steady trickle of civilisation, humanity, intelligence, and beauty which has persisted for so long in B.B.C. programmes amid mountains of triviality and stupidity. There are times, after all, when the trickle broadens into an ample stream: observe the vast new public for orchestral music, the unfailing popularity of the Brains Trust.

The fashion of sneering at the Brains Trust seems to me a foolish one. Of course, some nonsense is talked (just try the game yourself), but the proportion is remarkably low, while the standard of good humour, wit and intellectual alacrity is (let's face it) very much higher than most of us can enjoy in our immediate circle. What a surprising and important discovery it is that abstract intellectual debate should rank high among the pleasures of the British race. And how good for six million people, increasingly exposed to mass-produced opinion on all subjects, to learn once a week that the cleverer you are the less you take for granted.

A word of welcome to two recent English symphonies heard during the past week: Vaughan Williams's Fifth—all serenity, visions, shifting clouds; and Lennox Berkeley's First—elegant, lyrical, blessedly unportentous. Note, by the way, if you are an early riser, that the excellent "Composer of the Week" series reaches this week a notable English couple—William Walton and Benjamin Britten.

The Least

By JAMES

A Murder for a Valentine. Lyric
Salute the Soldier. Stoll

"A MURDER FOR A VALENTINE" has an excellent first act, a middling second, and a third which is nonsense. Delia Channing (Miss Cathleen Nesbitt) is a maiden lady of uncertain age with a strength of character like that of Lady Macbeth, Medea and the Medusa combined. When she speaks, little serpents fall from her mouth on to the floor and coil themselves on their tails to add their venom to hers. But Mr. Sylvaine would have us understand that Delia has not been bad from the beginning, that she is essentially a starved woman whose first and only sweetheart has married her sister. It is true that she has a paramour, one Ernest Motford (Mr. Malcolm Keen), dashing if middle-aged, and built rather on the lines of Thomas Wainewright. We gather, however, that it is a passionless liaison, and one thinks of Cayley Drummle's picture of the first Mrs. Tanqueray "all marble arms and black velvet," and how Aubrey hoped in vain that she would thaw. Not that this play's Mr. Motford can entertain any such notion, his Delia being shrouded in blackest silk from top to toe with nary a snatch of marble visible.

Let me, however, get back to the eighteen-seventies. To Delia has been bequeathed Veronica, her orphaned niece and heiress to a fortune. Now Motford resembles Wainewright in ways other than love of poetry and the fine arts; he is hard up. Why not murder Veronica asks Delia, who, inheriting the money, will hand it over to Motford? But Motford deems murder at best a tricky business. Very well, says Delia, no need to put Veronica away. Let her be kept in the bedroom Delia prepared for her marriage thirty years ago, and which she has preserved *à la* Miss Havisham. The pair agree to pretend that Veronica—who, by the way, is about to have a baby by a soldier-lover—has thrown herself into the river. (What they are going to do with her after the suicide story has been accepted we are not told.) But here Motford makes a slip. He falls for Veronica, and promises, if she will marry him, to forget all about that bag of bones which is Delia. Alas for Motford, the bag overhears.

* * *

And then Motford overreaches himself. Did this unfortunate young lady make any effort to save herself, asks Scotland Yard's affable representative (Mr. Julien Mitchell). But, of course, says Motford, that inveterate quoter across whose memory now float some lines from his favourite poet:

> There is a willow grows aslant a brook,
> That shows his hoar leaves in the glassy stream.

He describes how Veronica-Ophelia clutches at a willow plainly to be seen from the drawing room window, and how alas, an envious sliver broke. Whereupon the detective says that this is all his eye since the willow is twenty [illegible]

The Least Said . . .

By JAMES AGATE

A Murder for a Valentine. Lyric
Salute the Soldier. Stoll

"A MURDER FOR A VALENTINE" has an excellent first act, a middling second, and a third which is nonsense. Delia Channing (Miss Cathleen Nesbitt) is a maiden lady of uncertain age with a strength of character like that of Lady Macbeth, Medea and the Medusa combined. When she speaks, little serpents fall from her mouth on to the floor and coil themselves on their tails to add their venom to hers. But Mr. Sylvaine would have us understand that Delia has not been bad from the beginning, that she is essentially a starved woman whose first and only sweetheart has married her sister. It is true that she has a paramour, one Ernest Motford (Mr. Malcolm Keen), dashing if middle-aged, and built rather on the lines of Thomas Wainewright. We gather, however, that it is a passionless liaison, and one thinks of Cayley Drummle's picture of the first Mrs. Tanqueray "all marble arms and black velvet," and how Aubrey hoped in vain that she would thaw. Not that this play's Mr. Motford can entertain any such notion, his Delia being shrouded in blackest silk from top to toe with nary a snatch of marble visible.

Let me, however, get back to the eighteen-seventies. To Delia has been bequeathed Veronica, her orphaned niece and heiress to a fortune. Now Motford resembles Wainewright in ways other than love of poetry and the fine arts: he is hard up. Why not murder Veronica asks Delia, who, inheriting the money, will hand it over to Motford? But Motford deems murder at best a tricky business. Very well, says Delia, no need to put Veronica away. Let her be kept in the bedroom Delia prepared for her marriage thirty years ago, and which she has preserved *à la* Miss Havisham. The pair agree to pretend that Veronica—who, by the way, is about to have a baby by a soldier-lover—has thrown herself into the river. (What they are going to do with her after the suicide story has been accepted we are not told.) But here Motford makes a slip. He falls for Veronica, and promises, if she will marry him, to forget all about that bag of bones which is Delia. Alas for Motford, the bag overhears.

◆ ◆ ◆

And then Motford overreaches himself. Did this unfortunate young lady make any effort to save herself, asks Scotland Yard's affable representative (Mr. Julien Mitchell). But, of course, says Motford, that inveterate quoter across whose memory now float some lines from his favourite poet:

> There is a willow grows aslant a brook,
> That shows his hoar leaves in the glassy stream.

He describes how Veronica-Ophelia clutches at a willow plainly to be seen from the drawing room window, and how alas, an envious sliver broke. Whereupon the detective says that this is all his eye since the willow is twenty yards up a stream running with

point before the detective does. The second act is taken up with the trial of Motford, the bag of bones snatching its revenge by refusing to give evidence.

The disastrous third act? Sir Max Beerbohm once told the London dramatic critics that they were as fine a body of men as the Metropolitan Police. Let me return the compliment and say that the Metropolitan Police are at least as intelligent as the Critics' Circle. Put the youngest member of that august body in a room in which a living person is known to be concealed, and I think he will find that person, even if it means pulling down all panels and measuring the thickness of the wall at all points. I take it to be a libel on the Yard that this play's detective does not think of this. And now Motford, having escaped from the van which is taking him to Broadmoor, enters in time to hear Delia thank her peculiar gods for eight o'clock on a fine sunny morning. Whereupon Motford, who has not been hanged and deciding that he may as well go to Broadmoor for two murders as for one, throttles Delia.

Why is this an unsatisfactory thriller? Not because the facts will not bear examination when we get home, but because they do not stand up while we are still in the theatre. Mr. Keen's urbanity in all circumstances is very pleasant, Mr. Mitchell is superb whenever he has the chance, and once more Miss Nesbitt puts to bed ninety-nine out of every hundred of our other so-called actresses.

◆ ◆ ◆

Since "Salute the Soldier" is put together without ingenuity, eloquence or wit, one had to find entertainment in one's self. What does the shade of Cromwell feel about those Restoration dramatists of his provoking? Wolfe's "Gentlemen, I would rather have written Gray's 'Elegy' than take Quebec"? But is the dilettante spirit quite what we want to foster? I imagine that most of Stalin's generals are more interested in the new push than in the old Pushkin. Also that our modern British commanders are keener about the second front than the Second Symphony of Elgar or anybody else. In the matter of those Scotch pipers would de Vigny have written

> Dieu! que le son du cornemuse
> est triste au fond des
> Trossachs?

These and other fancies whiled away an entertainment about which one would only say what an earlier critic said about Mr. Shaw's poetry: "We salute an honest effort." Honest but mistaken, and much of it embarrassing.

THEATRE DIARY

George Black's next production in London will be "The Rest Is Silence," a play based on the Scottish trial of Madeleine Smith, with Ann Todd and Karel Stepanek. Also coming to the West End soon is Jack Hylton's production of Priestley's latest play, "How Are They at Home?" "The Quaker Girl," with Jessie Matthews, is being revived this summer by Emile Littler. This week's first nights are:

TUESDAY.—Reginald Long's comedy, "One Room": Gene Gerrard, Winifred Shotter (APOLLO).

WEDNESDAY.—Thomas Job's thriller

Old and New Films

By DILYS POWELL

ONE of the best "New Yorker" jokes in recent years was Charles Addams's drawing of an elderly gentleman with an umbrella fighting a losing battle against a large octopus which is emerging from a manhole in the pavement; a bored onlooker turns away with the remark: "It doesn't take much to collect a crowd these days." This reminds me of the blissful early days of the cinema, when a film called "The Travelling Bed" was all the rage. The piece commemorated the plight of an evicted tenant whose bed, taking charge of him and the situation, moved smartly out of doors and down the street. The audience was in a condition of mingled rapture and mystification, and nobody guessed that a party of stage-hands were pushing the bed from behind.

It didn't, indeed, take much of a film to collect a crowd in the early years of the cinema. A favourite in the cradle days was a scrap showing an orphan perishing in the snow at the church door and being removed by angelic lift. A heavily-clad lady observed swimming in the company of a couple of fishes was received with transports and encores. And one of the most sensational of early films told the story of a tipsy workman who takes a nap in the middle of the road, has his legs cut off by a passing taxi, and is restored by the passenger, a doctor, who replaces the pieces with perfect success and amidst general handshaking. The cast for this film demanded one able-bodied man and one legless player. The able-bodied actor lay down in the road and the taxi was photographed approaching. The camera was stopped while the cripple, equipped with artificial legs, was substituted in the path of danger; then the taxi proceeded and ran over its victim, sending his legs flying. A second substitution, and the first actor was photographed complete with real legs; and the audience went home flummoxed.

◆ ◆ ◆

Looking back (since there are no new films this week to keep my eyes on the present) at the films of the past year or so, I notice, of course, a certain change in the choice of subjects since the days of "The Automobile Accident." Angels no longer call to collect homeless orphans, it is true, and a pair of breakaway legs no longer provide the climax of a drama. And yet there are times when I should hesitate to claim for the cinema any great raising of intellectual standards. I recall, for instance, a piece called "Ship Ahoy," in which the talents of Eleanor Powell were spent on a

COMPANY MEETINGS

HOOVER LIMITED

Record Turnover

The ordinary general meeting of Hoover, Limited, was held on Saturday at Perivale, Greenford.

Mr. C. B. Colston (chairman and joint managing director), in the course of his speech, said: It is certain that in the not too distant future we shall have to devote our energies to peace-time products.

What then is going to be the position of your company during the transitional period and thereafter? When war broke out the only thing we manufactured, and sold, was the Hoover electric cleaner. During these peace-time years we created a highly efficient manufacturing organisation and built up a fine production team with the most modern equipment at its disposal.

Our change-over to war production was smooth and rapid. We have manufactured a variety of war products, very different from our peace-time production. Our manufacturing costs have compared favourably with other companies. We have made a number of striking contributions in the field of design and have instituted economies in manufacture which have saved the Exchequer very substantial sums.

When the country has come victoriously through this long period of struggle your company will be faced with an enormous task. We shall have four or five years' normal replacement sales to catch up, and many users who have rightly refrained from having their machines serviced will require service.

I am confident that we shall be able to change back to peace-time products with the same speed as we switched over to war production.

This year our turnover is a record, many times our pre-war turnover. But your company has not become liable for E.P.T. owing to the very small margin of profit which has been made (and rightly so) on the war goods we manufacture.

The report was adopted.

BRITISH THOMSON-HOUSTON

Contribution to War Effort

The forty-ninth ordinary general meeting of the British Thomson-Houston Company, Limited, was held on Monday in London.

Mr. H. M. Sporborg (the chairman) said that the profit for the year, after deducting all expenses and charges other than interest on Debentures and loans and after providing for taxation, was £580,362 as compared with £562,883 for the previous year. The directors recommended the payment of a dividend on the Ordinary shares at the rate of 7 per cent. for the year, less income-tax.

Their manufacturing plants had been maintained during the year in as high a state of efficiency as possible under existing conditions. Their capital expenditure on manufacturing equipment and buildings during the year had been necessarily curtailed by the prevailing conditions, but they had fully maintained their established practice of past years by writing off to depreciation of their plant account £226,435.

It was, of course, not possible for him to refer in any detail to the company's great contribution to the war effort, but he would like to express to the authorities concerned their satisfaction at their permission to refer through the technical press to the company's work with Group Capt. Whittle and the Power Jets Company in the development of the Jet Engine.

He would not detain them with a long dissertation on the many aspects of the problems of post-war industry which were now being discussed by so many people, but the Board was fully alive to the many urgent problems that would need to be dealt with as soon as a change in the war situation permitted.

The report was adopted.

...wholly desirable in itself. It may easily interfere with the restoration of our world-wide ... houses and insurance companies arising out of their overseas business bring us in foreign exchange just as surely as do the efforts of British exporters. Any post-war system of exchange control must never lose sight of that fundamental fact.

We cannot, however, leave the pound at the mercy of sudden international capital movements, whether inspired by passing fears or by a desire to snatch a quick profit on some foreign security market. Until we have built up our foreign exchange resources, we must earmark all available supplies of exchange for productive purposes.

Finally we cannot commit ourselves to the maintenance of an unalterable rate of exchange for sterling. If we did, the time might arise when such an undertaking might threaten us with the evils of either inflation or deflation at home.

San Paulo Bonds

Article 12, paragraph 1, of the Decree 6019, relating to the Brazilian debt settlement, states clearly that "Under Plan A the total annual service for interest and amortisation established for each debtor shall remain constant until the final redemption of all the bonds issued by that debtor and actually outstanding."

Nevertheless it has been said in some quarters that there is doubt as to whether the service moneys of the San Paulo Coffee Bonds will, under Plan A, be applicable to other bonds issued by the State of San Paulo, when the former have been retired. In reply to inquiries, it is understood that the Brazilian authorities are considering the matter.

Unless the Brazilian authorities do not wish to implement the agreement, which they have so recently made, there can be only one interpretation of the decree. Meanwhile my advice to holders of San Paulo bonds is not to opt for Plan A or B until the doubt is finally cleared up.

THE WEEK'S MARKETS

General conditions again exercised restraint upon markets. While business was far from brisk, prices in the main were steady. The main interest was in Industrials, but this was limited to a few specialities. Brazilian Tractions were strong around 28 dollars, on hope of the April dividend being raised to one dollar against 75 cents.

Courtaulds were not affected by the full accounts, which showed that almost 70 per cent. of profits went in taxation. British Celanese gave way on the latest Debenture proposals, but buyers appeared around 27s. 6d.

RAILWAY EARNINGS

The case for a revision of the 1941 Railway Agreement is strengthened by the results for 1943, as well as by the latest report of the Select Committee on National Expenditure. The net revenue of the railway pool has risen from £89,126,000 in 1942 to £105,568,000 last year. With the railways' rental fixed at £43,469,000, Government's share has increased from £45,657,000 to £62,099,000.

It is small wonder that the Select Committee finds that that arrangement is "of undoubted advantage to the State," which during the past three years has received nearly £130,000,000 from the railways. The companies

Continued in next column

Continued from preceding column

ought to be given their 1921 standard revenue of £56,900,000 a year, but I doubt if the Government will reopen the question.

RAND WAGES

As I had expected, the Mine Native Wages Commission has recommended an increase in native wages in the South African gold mines. The actual award announced by the Union Government will cost £1,850,000 a year but as this additional burden would cause certain low-grade mines to close down, it has been decided that it will be met out of the gold realisation charge of £2,000,000 a year, which the mines already have to bear.

This wage increase, therefore, will not add to production costs. The mines must now await the outcome of the strike ballot among white miners. This I expect to result in some increase in white wages. The encouraging point so far is that the Union Government realise the importance of the gold mining industry being able to pay its way.

WALL STREET

NEW YORK, Saturday.

The Stock Exchange opened firm and fairly active. Timid buying centred on rails and specialities. Pivotal stocks contended with more profit-taking, but selling was not urgent, and there was sufficient investment demand to keep trends balanced. The close was irregular. The turnover of 448,000 shares comprised 698 issues, of which 229 advanced, 224 declined, and 245 remained unchanged.

Music for t...

By RALP...

THE necessity for cultural entertainment for members of the Forces is gradually being recognised by the authorities. A fair percentage of the millions of young men and women serving in the Forces are not content with the usual forms of flippant popular entertainment. They want something more intelligent and cultural, something that appeals to the mind as well as the emotions. A timely reaction, I presume, to the maudlin inanities of Hollywood and Tin Pan Alley.

A senior naval officer recently said to me: "Our fellows have a tough and exacting job to do, and a tougher one in prospect. When they have their free time by all means let them have their ordinary amusements, but if we can guide their interests into really worthwhile channels, we have accomplished something of vital importance. Whatever the hard times they may go through in the future they will have the experience, the memory, of something bigger than themselves." In other words, they will be provided with a mental life-line.

• • •

Now E.N.S.A. has been quick to realise that the enthusiasm for great music on the part of the civilian public and of members of the Forces since the war has immense possibilities—the possibilities of creating a new and really intelligent musical public.

Concerts by our leading symphony orchestras have been given at numerous naval, air force, military, and factory centres all over the country with always one result: a packed hall and the keenest appreciation. The important thing, however, about these concerts is the fact that no concession is made to what is wrongly supposed in commercial circles to be "popular taste." The great classical masterpieces of Handel and Corelli to those of Beethoven, Berlioz, and Wolf line up with the best music of our time: a symphony by Sibelius or Walton, a new overture by Bax, Vaughan Williams, or Alan Rawsthorne.

Walter Legge, liaison officer to the Musical Advisory Committee of E.N.S.A., who has been largely responsible for this progressive policy, says that these concerts are "the justification of the plain man, who is free from the nonsense so often put over in lectures on musical appreciation and in text-books on musical form, for he has no preconceived ideas on what is good or bad taste. He is simply a person whose natural reactions come into immediate contact with greatness."

My personal experience as a lecturer and journalist bears this out. The impossible type of plain man of music is he who has a little text-book knowledge and a fair experience of commercialised music-making. He is full of prejudices and hopelessly egotistical. He knows what he likes and likes what he knows.

The future of this new musical public is not entirely in the hands of E.N.S.A. or any other non-commercial musical organisation. A considerable responsibility rests on those who are concerned with musical education in one form or another. So long as professionalism with its parochial system of examinations continues to be the ideal of musical educationists, then a healthy and intelligent musical life in Britain is likely to prove a will-o'-the-wisp. Organisations like E.N.S.A. may plot out the land to the best advantage, but solid foun-

Music for the People

By RALPH HILL

THE necessity for cultural entertainment for members of the Forces is gradually being recognised by the authorities. A fair percentage of the millions of young men and women serving in the Forces are not content with the usual forms of flippant popular entertainment. They want something more intelligent and cultural; something that appeals to the mind as well as the emotions. A timely reaction, I presume, to the maudlin inanities of Hollywood and Tin Pan Alley.

A senior naval officer recently said to me: "Our fellows have a tough and exacting job to do, and a tougher one in prospect. When they have their free time by all means let them have their ordinary amusements, but if we can guide their interests into really worthwhile channels, we have accomplished something of vital importance. Whatever the hard times they may go through in the future they will have the experience, the memory, of something bigger than themselves." In other words, they will be provided with a mental life-line.

◆ ◆ ◆

Now E.N.S.A. has been quick to realise that the enthusiasm for great music on the part of the civilian public and of members of the Forces since the war has immense possibilities—the possibilities of creating a new and really intelligent musical public.

Concerts by our leading symphony orchestras have been given at numerous naval, air force, military, and factory centres all over the country with always one result: a packed hall and the keenest appreciation. The important thing, however, about these concerts is the fact that no concession is made to what is wrongly supposed in commercial circles to be "popular taste." The great classical masterpieces of Handel and Corelli to those of Beethoven, Berlioz, and Wolf line up with the best music of our time: a symphony by Sibelius or Walton, a new overture by Bax, Vaughan Williams, or Alan Rawsthorne.

Walter Legge, liaison officer to the Musical Advisory Committee of E.N.S.A., who has been largely responsible for this progressive policy, says that these concerts are "the justification of the plain man, who is free from the nonsense so often put over in lectures on musical appreciation and in text-books on musical form, for he has no preconceived ideas on what is good or bad taste. He is simply a person whose natural reactions come into immediate contact with greatness."

My personal experience as a lecturer and journalist bears this out. The impossible type of plain man of music is he who has a little text-book knowledge and a fair experience of commercialised music-making. He is full of prejudices and hopelessly egotistical. He knows what he likes and likes what he knows.

The future of this new musical public is not entirely in the hands of E.N.S.A. or any other non-commercial musical organisation. A considerable responsibility rests on those who are concerned with musical education in one form or another. So long as professionalism with its parochial system of examinations continues to be the ideal of musical educationists, then a healthy and intelligent musical life in Britain is likely to prove a will-o'-the-wisp. Organisations like E.N.S.A. may plot out the land to the best advantage, but solid foundations are needed for the creation of worthwhile buildings that will stand the test of time.

NEW ORATORIO

A successful first performance of Michael Tippett's oratorio "A Child of Our Time" was given at the Adelphi Theatre last week by the London Philharmonic Orchestra with the London Region Civil Defence and Morley College Choirs, and Joan Cross, Margaret McArthur, Peter Pears and Roderick Lloyd as soloists, conducted by Walter Goehr. The texture of the music, which shows the work of a highly skilled polyphonist, is as disarmingly simple as the orchestration is economical and effective. As a whole, the music has great distinction and expressiveness.

There is, however, a feeling of incongruity in the composer's use of certain negro spirituals, beautiful as they are. To quote in the programme note the precedent of Bach and that master's use of the German chorale is not a good parallel, for Bach was steeped in the chorale tradition, whereas Mr. Tippett's style bears no relation to the tradition of the negro spiritual. The text, which is by Mr. Tippett himself, is rather naive and too obviously sentimental in treatment: it might have been written by one of the lesser German romantic poets of the nineteenth century.—R. H.

Mr. Newman, who is indisposed, hopes to resume his articles soon.

as hand luggage while retaining its magnetism. Like me, you may not have ... old mesmerism malarkey at the climax of which Anne Crawford sat in a chair on a tight-rope holding a length of drainpipe over a roaring bonfire. Only the other day in "Phantom of the Opera" we saw Claude Rains in a Paris sewer playing a grand piano whose means of transport from the upper world was, to me at any rate, at least as mysterious as the movement of any travelling bed; playing it, what is more, in perfect synchronisation with the good Liszt on the Opera stage. In "Tarzan's Desert Mystery," again only the other day, Johnny Weismuller was released by a herd of elephants from a contracting sundew roughly six feet high, the rescue taking place just in time for our athlete to save a blonde in a cave from a giant spider built, apparently, of black felt and japanned ware and moving (somewhat jerkily) on wheels.

Or, if we leave aside the realm of the supernatural or semi-natural, how are we to accept the standards of the contemporary war film, where emphasis on realism might be expected? Let me recall to memory "Assignment in Brittany," in which a party of British Commandos landed armed with bows and arrows; and "Mademoiselle France," in which Joan Crawford defeated the Gestapo with no weapon to speak of except her eyelashes. I will not speak of the long series of British comedies: of George Formby's highjinks in the Home Guard or Arthur Askey's frolics in Nippy costume in "Bees in Paradise." I will keep silence on Hollywood's musical adventures with Technicolor volcanoes. I will not even dwell on "Hitler's Madman." I will simply leave you with the question: which would you rather see, "The Travelling Bed" or "Happidrome?"

PASSION

By the REV. R. F. V. SCOTT

IN our common usage nowadays, the word "passion" generally means either "ardent desire" or "great rage." We seldom use it to convey its root meaning, which is "the power of feeling pain or suffering." But to-day is called, in the Christian Calendar, Passion Sunday, and in that title the old meaning of the word lives again. From now until Easter Day, the minds of the faithful (and incidentally of many who would not number themselves amongst the professed believers) will be directed specially to the Passion of our Lord—to His sufferings and death upon the Cross. He was, indeed, no stranger to passion in its active sense. It was a blazing passion of His life, to fulfil in word and deed the will of God. Neither misunderstanding, nor threats, nor pain, nor temptation, nor treachery could cause Him to swerve one inch from the path to which the Father called Him. Just because of this, the passion of anger blazed up in Him against those of the Scribes and Pharisees who used their religion as a cloak to cover their cruel extortions and exploitations. They hindered the fulfilment of God's will and purpose. They were the chief enemies of His kingdom. No passage in literature is more terrible in wrath than that in which Our Lord inveighs against those hypocrites.

Yet it is, above all else, as the Supreme Sufferer that Our Lord has drawn the longing and loving gaze of men. The greatest of the Prophets foresaw Him as "a man of sorrows and acquainted with grief." That is not the whole truth about Him, but it is a great part of it.

His utter sincerity; His passion for God's righteousness; His refusal to compromise with selfishness and sin led Him step by step to the Cross. He suffered. From the wilderness of temptation to the garden where they buried Him, His story is of buffeting and wounds. His words and deeds are wonderful, but more wonderful still is what He endured.

Had He been only a man His example would steady and cheer us amid the trials and terrors of our time. We should see in Him the great exemplar. In our stand for right against might, for freedom and truth against tyranny and lies He would march in the van of our endeavour, leading us to ever greater heights of service and sacrifice. We should give praise and thanks to God for the memory of such a man.

But He was not only man. He was God; rather He is God. His sufferings and endurance are not only a picture of what man ought to be, they are a picture of what God is. In Jesus Christ we know that God suffers with us and for us. The story is not just of a man, enduring bravely to his end in the grave. It is of God, by the resurrection of Christ from the dead, vindicating to all eternity the cause of righteousness and freedom and truth. This is the truth that does more than call men to be courageous. It is the truth through which courage and endurance are given even to the tired and timid.

DO YOU KNOW ?

1. What sport is suggested by the words "mews," "eyas," "tercel"?
2. Whence comes the term "Palladian" architecture?
3. Who is the author of the aphorism: "A constitutional statesman is in general a man of common opinions and uncommon abilities"?
4. What were the Christian names of (a) Erasmus (b) Cardinal Newman?
5. What does the technical term "establishment of a port" mean?
6. What is a palindrome?

COMPANY MEETING

MAPPIN & WEBB, LTD.

8 p.c. Dividend Maintained

The thirty-fifth annual general meeting of Mappin and Webb, Limited, was held in London on Wednesday, Mr. Herbert J. Mappin (the chairman) presided.

The following are extracts from the chairman's statement, issued with the report and accounts.

The profit at branches, etc., is £325,834 and is a considerable increase over the previous year, but, owing to the incidence of taxation, this increase must be largely set aside for this purpose, which is the reason why the provision for taxation requires £254,000 compared with £125,000.

The net profit for the year is £50,601, being a slight increase over the previous year.

We again recommend a dividend on the Ordinary stock of 8 per cent., less tax, which, after providing for the Preference dividend, will, if the directors' proposals are adopted, leave a balance of profit to be carried forward to next year of £89,410, which is an increase of £15,301 compared with the amount brought in. For some years we have steadily built up our carry forward, which will be available to meet any future contingencies.

QUALITY MAINTAINED

Stocks on hand show a reduction, which reflects the increased demands made upon us by our customers, as a consequence of which our supplies are more readily disposed of. Whilst supplies for other than war purposes are difficult to produce, we are hopeful that we shall be able to continue to meet the requirements of our retail customers without any lowering of the high standard of quality upon which the business has been founded.

Sundry debtors show a considerable increase, due to the expansion of our turnover.

WAR OUTPUT OF FACTORIES

I have, on previous occasions, referred to the war output of our factories, which, during the last year, was largely increased, and, doubtless, is consistent with the country's total production for the war effort. Our London retail businesses have shown satisfactory results, and our overseas' businesses have made a material contribution to our profits.

The report was adopted.

Here and There

New Writing and Daylight. Winter, 1943-44. (Hogarth Press. 8s. 6d.)
Introducing Modern Poetry: An Anthology. By W. G. Bebbington. (Faber. 6s.)

By DESMOND MacCARTHY

IN a "Bodega" years ago, among those black portly barrels which, though empty now, continue to preside over such resorts, I listened once to a respectably gifted literary journalist bewailing his career: he seemed to me an old man trying to be wise. And when, for my benefit, he spread his experience out, it all looked small and far below me, for I was floating high in youth's pink silk balloon. Then, as if afraid he had sketched too dark a forecast for me, he added, "Of course, it's a pleasant, interesting job compared with many. I believe I'd be a contented man myself, even now, if only I could be paid for instantly re-writing everything I write. Talk about *l'esprit d'escalier!* With me thoughts blow in too late, and the moment I have read myself in print I see how matters could be better stated. And then I have to turn to something else. Believe me, you'll find journalism nothing but incessant practice in initial sprints. You'll learn to be quick at taking off, but never how to stay a course. If you're thinking of running for fame, get out." This voice came back to me across the years while I was wishing that I could continue my last week's article on James Joyce, and introduce the work of a young Greek poet-journalist, whose recent and untimely death was commemorated in last week's SUNDAY TIMES, and whose essay on Dostoievsky now appears in Mr. John Lehmann's cosmopolitan miscellany, "New Writing and Daylight." I could see a connection.

It lay between the terror and disgust that underlies the verbal exuberance of "Ulysses" and Demetrios Capetanakis himself, who understood with great penetration such a background and was adept in tracing its effects upon imaginative work. His essay in this issue of "New Writing and Daylight" on Dostoievsky is remarkable in this respect. If his other contributions, his Rimbaud, his Stephan George, his study of "philosophic anxiety" in writers as different as Virginia Woolf, Spender, Auden, Day Lewis, Isherwood, and John Lehmann are collected, they will make a memorable little book of criticism, with a theme.

* * *

Mr. Bebbington has put together a selection from twenty-one "modern" poets with the aim of encouraging in boys and girls (he is a schoolmaster) a love of modern poetry. It is educationally most important to do this, not because "modern" poetry is superior to the poetry of the past or to contemporary poetry traditional in manner and matter, but because all experiment in form and diction being prompted by an urgent need to absorb contemporary aspects of life, the results may appeal to the experience of youth. Such poetry will reflect the emotional bewilderments, hopes, distress, and fears of creatures moving about in a world not understood, and to which they have not yet got habitually accommodated. Thus they may be also brought to feel poignantly the relation of all poetry to life—the reality of poetry, if you like to put it that way, and avoid the mistake of thinking that poetry is (to quote Mr. Bebbington's preface) "an old-fashioned habit of certain famous men and women of the past and certain elderly or queer gentlemen and ladies of the present," but, on the other hand, that it is "still what it has been and always must be, ever young and dynamic."

I protest, however, against this superstitious use of the word "dynamic" which covers to-day so much bad thinking. Dynamic! As if movement, change, energy were good things in themselves apart from direction. Dynamic is a Nazi watch-word. The Germans glory in being a "dynamic" race, and we are trying to induce them for everybody's sake, their own included, to be a little more static in future. (Just before I wrote the above sentence a magnificently dynamic event took place near enough to shake this room in which I am writing. I hope, however, to remain statically occupied.)

This anthology contains a hundred and twelve poems, none of them long. Some are remarkably beautiful, others not; either because they aim at being only interesting and spontaneously sincere, or because they express moments of vision imperfectly focused, or because they suffer too much from that penitential mood which seems to have overcome many painters, musicians, architects, as well as poets to-day, driving them to embrace bleakness rather than richness, as though they hoped that everything would be added unto them if only they renounced the pomps and vanities of this wicked world (of Art). The mood is that in which a poet says, let my Muse go in rags and slippers rather than in singing robes.

* * *

The difficulty (only partially surmounted) has been to select "modern" poems which are likely to be understood by the young. Let the compiler compare his own anthology with "The Chiswell Book of Verse," composed by Robert Bridges for the same audience. He hotly denies that "modern" poetry is obscure, which is like denying that the verse of the Augustan Age was formal. Some of it may be most rewarding in spite of its difficulty, but that does not prevent its syntax often being more ambiguous than would have been tolerated in any other age, and its metaphorical allusiveness excessively perplexing. There are some poems in this anthology of which I, a practised reader, cannot see the point. There are some (Miss Edith Sitwell's, for example) in which I perceive it would be foolish to try—they are invitations to a dance of words. (By the way, I have also discovered in her lately a beautiful poignancy of pity.) But some of these poems are nothing if they do not enshrine a thought, a thought often illusive. More, of course, express moods, moments, impressions. I should have thought many of these were over-subtle for the young, needing a more complicated expe-

A Philosophy of Freedom

Slavery and Freedom. By Nicolas Berdyaev. (Bles. 25s.)

By THE DEAN OF ST. PAUL'S

This book confirms my opinion that Berdyaev is one of the most important of modern thinkers, and it does something also to support the view that he is one of the most exasperating. He condescends to no argument; he rarely notices possible objections; he philosophises by the method of oracular utterance; but he covers an immense field of speculation, he displays an overwhelming knowledge of European literature, and he deals always with living problems.

This is a book which is worth the pains of earnest attention because it is the work of a man who has felt the imperative need to penetrate by thought the mystery of existence. He does not claim to have constructed a perfectly consistent system, but he believes that he has attained the central insight. Such men are worth listening to, even if we finally disagree with them. The name which he chooses for his philosophy is "Personalism," and it is well chosen, because the foundation theme of the whole of his thinking is the supreme reality and value of the person. "Man, human personality, is the supreme value, not the community, not collective realities which belong to the object world, such as society, nation, state, civilisation, church." He goes farther than this and repudiates the platonic type of idealism, which exalts impersonal "eternal values" above persons. It must be confessed that Berdyaev calls on us to make drastic alterations in our normal assumptions. We are accustomed to regard the objective, that which seems to exist apart from us, as real and the "subjective" as illusory, or at least as the seat of illusion. The objective is, on the contrary, for Berdyaev the illusory and the objectivisation of the thoughts and activities of the person is the source of the different "slaveries" to which mankind is subject.

Berdyaev pursues the subject of freedom far beyond the political sphere and finds enemies for it which had perhaps been unsuspected by most of us, eroticism, aestheticism, and revolution; but the last enemy which must be destroyed is history and the subordination of the person to the historical process. Not the least interesting and challenging part of the book is the final pages where the author gives his interpretation of the "End of the World" and of history. Some personalist philosophies have dispensed with God. It need hardly be said that this is not Berdyaev's position. The whole of his thought moves within the framework of Christian Theism, and his concept of personality is that the divine energy breaks into the course of evolution, so that the person is not the product of temporal process.

Perhaps it would be only fair to the intending reader to give one example of the kind of conundrum which will confront him. "It might be said," remarks Berdyaev, "that the peasant is nearer to the sources of the world while the proletarian is nearer to the end of the world: there is something eschatological in him." Is that nonsense or wisdom? Wisdom, I think.

Weapons for Victory

New Novels

The Valley of Decision. By Marcia Davenport. (Collins. 12s. 6d.)
Without Orders. By Martha Albrand. (Chatto and Windus. 7s. 6d.)
Let Thy Moon Arise. By Anna Sebastian. (Cape. 7s. 6d.)
On the Edge of the Sea. By F. L. Green. (Michael Joseph. 9s. 6d.)
St. Martin's Beads. By Margaret Brash (Jarrolds. 9s. 6d.)

By RALPH STRAUS

MRS DAVENPORT has written yet another of those immensely long novels which trace out the growth of a great American commercial house, and lively and most interesting though it is, "THE VALLEY OF DECISION" on what is its purely business side does not differ markedly from a dozen other records of the kind. In the early eighteen-seventies the Scott Iron Works in Pittsburgh is a purely family concern, with William Scott as its benevolent despot; in the nineteen-forties, after labour troubles and financial battles, the Scott Steel Company, with strange names on its directorate though the largest shareholder is William's great-grand-daughter, is pursuing a policy which would certainly have astonished an earlier generation.

On its more domestic side, however, the novel has some agreeably unfamiliar features. There is, for instance, the story of William's daughter Constance, who at an early age insists on going her own wild way and becomes the notorious (but likable) Countess of Melling. There is, later, the very different story of her grand-daughter in a Europe becoming uneasily aware of Hitler. There is the astonishing rise of the Liska (Czech) family. Above all and dominating the whole book, there is the figure of Mary Rafferty who in 1873 comes as 'tween maid to the Scott mansion, and in 1941 is still there, alone, a much-loved and much-travelled old lady and faithful friend of all the Scotts. To her, indeed, the family owes more than it can ever repay, and the story of her long devotion to its interests is most sympathetically told. It is, I think, a very good if over-long novel.

* * *

THE new book by the author of "No Surrender" makes excellent reading. It is short and fast-moving, and for a story of espionage in Italy during the war queerly unlike what you might expect. When an American airman wakes up in a private asylum near Rome and finds himself regarded by everybody as an Italian aristocrat it is hardly surprising that he begins to doubt his own sanity; but "WITHOUT ORDERS" he sets out to solve the mystery, and after the most exciting adventures, which include a sentence of death and a happy little romance, he not only succeeds in escaping from the Germans, but also manages to bring away with him highly important [illegible]. Altogether a most enjoyable yarn.

* * *

IT is difficult to know how to describe Miss Sebastian's "LET THY MOON ARISE." Allegory? Intoxicated fairy-tale? Whimsy? Sheer nonsense? I don't know. The odd thing about the book is that although Stephanie's most nightmarish adventures—after her father's death in Vienna she becomes successively a thief, a dressmaker's assistant, and a landlady's companion—bring chuckles in their wake, there lurks in the background a suspicion of genuine pathos. Letters to the Editor

Continued from Page 4

The Demand For Music

Sir,—Your article, "Demand for Music," leaves no room for doubt as to the immense and growing appreciation of orchestral music throughout the country.

Seeing that the phenomenal growth in this appreciation in recent years is entirely due to the wireless having taken orchestral music to the fireside of millions who had probably never attended an orchestral concert in their lives, it is simply deplorable that the B.B.C. fails continuously in its programmes to respond adequately to the newly developed taste, whether by "direct" concerts or, if there are financial obstacles to any extension of this method, by gramophone records.

Take, for example, the programme for a current week. Between 9 a.m. and 11 p.m., which might be called normal listening-in time, or a total of 196 hours for the two services, only approximating eight hours are devoted to orchestral music of the following composers: Bach (55 m.), Beethoven (85 m.), Brahms (nil), Mendelssohn (118 m.), Mozart (82 m.), Schubert (50 m.), Tchaikovsky (60 m.), Wagner (45 m.). I have omitted the more modern composers.

This works out at little over four per cent. of total time, and is I submit, entirely inadequate.

CLIVE GARSIA (Lt.-Col.).
Army and Navy Club.

Sir,—The writer of the article "Demand for Music" says "that in most of the orchestral concerts throughout the country a pianoforte concerto is almost invariably an indispensable part of the programme."

Whatever may be the state of affairs in London, it is possible in the North of England to attract large audiences for a purely orchestral programme, and in support of this statement I would like to say that between July 5, 1943, and March 13, 1944, Mr. John Barbirolli conducted 138 concerts with the Halle Orchestra, at which only nineteen of the programmes included a pianoforte concerto.

Manchester. R. J. FORBES.

'Amerigo' or 'Ameryk'

Sir,—The theory that America owes its name, not to Amerigo Vespucci, but to the Englishman Richard Ameryk, has been exploded by Professor Williamson and others.

I write away from reference books, but the facts are that the ascription to Vespucci comes from Waldseemuller's "Cosmagraphiae Introductio" published in 1506, while the alleged authority for a derivation from Ameryk is Maurice Toby's Chronicle written as late as 1565.

In any case, the derivation from Ameryk or anyone else as early as 1496-9 is unlikely, as at that date it was unknown that a new continent had been discovered, which was not so in 1506.

Deganwy. D HARRISON

Sir,—The Customers Accompts for the Port of Bristol covering the years 1496-1499, and referred to by your correspondent Mr. Arthur Colborn as being among the Abbey Archives, consist of three sheets of paper roughly stitched together to form a roll about 4 ft. long. The entries on each sheet contain the payments made by the two Collectors of Customs, Arthur Kemys and Richard Ameryk, for a complete year running from Michaelmas to Michaelmas.

It is interesting to note that while on the first two sheets the name is given as Richard A. Meryk, on the third sheet it is given as Richard Ap' Meryke. On the first sheet, which refers to the years 1496-7, Cabot's name does not appear, for it was in the latter year that he discovered Nova Scotia. But on the second and third sheets the fifth item records the payment of £20 in 1497-8 to "John Coboot," and the same amount in 1498-99 to "John Cabot."

This interesting document, which brings the names of Ameryk and Cabot into such intriguing contiguity, is normally on view in one of the exhibition cases in the [illegible] House at Westminster but

absorb contemporary aspects of

tolerated in any other age, and its metaphorical allusiveness excessively perplexing. There are some poems in this anthology of which I, a practised reader, cannot see the point. There are some (Miss Edith Sitwell's, for example) in which I perceive it would be foolish to try—they are invitations to a dance of words. (By the way, I have also discovered in her lately a beautiful poignancy of pity.) But some of these poems are nothing if they do not enshrine a thought, a thought often illusive. More, of course, express moods, moments, impressions. I should have thought many of these were over-subtle for the young, needing a more complicated experience. Mr. Clifford Dyment's "Tango" is a marvellously exact piece of emotional description, but it is distinctly adult. On the other hand, such a triumphant character portrait in verse as Mr. Louis MacNeice's "Gardener" is accessible to all.

Czech Struggles

A History of the Czechs and Slovaks. By R. W. Seton-Watson. (Hutchinson. 15s.)

By ALAN H. BRODRICK

Inevitably, perhaps, this book gives both more and less than its title seems to promise. One feels that the author would hardly have added "and Slovaks" to the appellation had not "Czechoslovakia" been the name chosen for the Succession State with its capital at Prague. The Slovaks are, indeed, an example of an unhappy people with no history.

On the other hand, this book is much more than a mere history of Bohemia and Moravia. Not only are the fortunes of the Czechs presented against a background of general European story—and, in particular, that of the Holy Roman Empire—but when we come to the nineteenth century we are provided with an excellent and reliable guide to the political history of the whole Dual Monarchy.

The origins of the Bohemian State go back to about the eighth century, and during the Middle Ages the realm at the centre-point of Europe, although both surrounded and influenced by the Empire, was not a part of it. The Czech people early developed a sense of nationality, one manifestation of which was the strong swing towards Protestantism in the sixteenth and seventeenth centuries. The Czechs were re-Catholicised by the ferocious repressions of the emperors.

When we come to the relation of the last 100 years and of the inspiring story of the Czech Renaissance, Professor Seton-Watson leads us along very skilfully, although it cannot be denied that the book is tightly packed and no light reading.

FOR YOUR LIBRARY LIST

... kind of conundrum which will confront him. "It might be said," remarks Berdyaev, "that the peasant is nearer to the sources of the world while the proletarian is nearer to the end of the world; there is something eschatological in him." Is that nonsense or wisdom? Wisdom, I think.

Weapons for Victory

By HAROLD HOBSON

Mr. E. R. Stettinius, Jnr., in **"Lend-Lease: Weapon for Victory"** (Macmillan. 18s.), is concerned with the relations of the United States with all her allies, but especially Britain; Sir John Marriott, in **"Anglo-Russian Relations: 1689-1943"** (Methuen. 8s. 6d.), confines himself to considering the interaction of Britain and Russia. Sir John's outlook is historical, impartial, and realistic. The Anglo-Russian path has up to now been a stony one; the Crimea, Tsarist languishments after India, British intervention in the Russian civil war, and the whole tale of the Communist International have tripped up many a statesman. Sir John gives, of these and other things, a plain, straightforward, and valuable account, and comes to the cheering conclusion that the main causes of disagreement between Britain and Russia need no longer be active.

Lend-Lease, on the other hand, is a matter that might easily breed acrimony in the future, unless it is fairly presented, and properly understood now. Mr. Stettinius's book, an extract from which has already appeared in THE SUNDAY TIMES, does so present it. The author was responsible for the direction of Lend-Lease affairs and his book is partly autobiographical. All along Lend-Lease has been a two-way business; in the early days the United States, with its munitions, bought time, the least purchasable of commodities, as many an elderly and ailing millionaire has discovered. Now Lend-Lease is extended to cover all the Allies, and even in the material sense it is reciprocal. Mr. Stettinius's work is a magnificent summary of a masterly experiment, and a contribution to Anglo-American friendship.

So is Mr. John Michael Townend's **"Overture to Life"** (Rich and Cowan. 7s. 6d.). Mr. Townend spent his time training in the Fleet Air Arm in Canada and the United States. He says he expected to get a dime, and was given a dollar; he repays in words of gold.

Mr. P. P. Howe

Mr. P. P. Howe, who has died at the age of 57, will be long remembered for his classic life of Hazlitt, and for the scholarship which he brought to his great edition of that author. He will be remembered, too, as a publisher who cared passionately for literature: some of the notable authors of our time owe a debt to Howe for the encouragement he gave them in their early days. In 1938 he became a director of Hamish Hamilton Ltd., and in Great Russell Street possibly the happiest years of his life were spent. Before that he had a valued association with Martin Secker in John Street, Adelphi.

enjoyable yarn.

* * *

IT is difficult to know how to describe Miss Sebastian's "LET THY MOON ARISE." Allegory? Intoxicated fairy-tale? Whimsy? Sheer nonsense? I don't know. The odd thing about the book is that although Stephanie's most nightmarish adventures—after her father's death in Vienna she becomes successively a thief, a dressmaker's assistant, and a landlady's c o m p a n i o n—bring chuckles in their wake, there lurks in the background a suspicion of genuine pathos. Everybody the girl meets is more than a little mad, as she is herself, but—you read on and are left wondering whether, perchance, rather more of the world's workers than you had imagined are not so sane as they might be.

* * *

MORE than once Mr. F. L. Green has shown how skilfully he can conjure up an atmosphere of frightening suspense. In "ON THE EDGE OF THE SEA" he gives us the story of an English merchant who just before the war becomes involved in a plot to kill Hitler. The scene is a town in the North of England (where the Gestapo are less successful than they seem to be in their native haunts), and, as you expect, the story itself is carefully written and neatly worked out.

* * *

IF "ST. MARTIN'S BEADS" is a romance on rather old-fashioned lines, it reads very well and ends on a note that is new. Hilary breaks off her engagement to the nice but elderly Sir Chris when she falls in love with the ambitious Dorne who is managing the baronet's Yorkshire works. Then Dorne's past rises up against him, and he goes too far. Politics and commerce play equal parts in a story which, if slightly improbable, is adroitly told.

Some Sportsmen

Golden Miller, greatest of steeplechasers, finds a fitting biographer in his trainer, Basil Briscoe (**"The Life of Golden Miller,"** Hutchinson. 9s. 6d.), from his first unpromising appearance at Southwell in 1930 to his later triumphs. Mr. Briscoe, with liveliness and point, also gives a good deal of information about himself and his family. It would be wrong to judge either Eton or Cambridge by Mr. Briscoe's experiences, but these are both entertaining and good-humoured pages. A. Henry Higginson, author of **"A Tale of Two Brushes"** (Collins. 6s.) is also a devotee of horses. He has a Trollopian enjoyment in hunting, and a shrewd eye for character. His sketches of South Dorset meets are well done.

A. R. Harris Cass, in **"Budding Angler"** (Jenkins. 8s. 6d.) foresees a boom in fishing after the war, and gives the beginner much useful instruction. His manner is at times pugnacious, but his advice is helpful. Captain C. W. R. Knight's **"All British Eagle"** (Hodder and Stoughton. 10s. 6d.) also does not lack the fighting spirit; nor does his eagle, who thought little of being torpedoed in the Atlantic, and is always ready to moult a feather in aid of "Wings for Victory" weeks.

THIS PAGE IS DECLASSIFIED IAW EO 13526

... kind of conundrum which will confront him. "It might be said," remarks Berdyaev, "that the peasant is nearer to the sources of the world while the proletarian is nearer to the end of the world: there is something eschatological in him." Is that nonsense or wisdom? Wisdom, I think.

Weapons for Victory

By HAROLD HOBSON

Mr. E. R. Stettinius, Jnr., in **"Lend-Lease: Weapon for Victory"** (Macmillan. 18s.), is concerned with the relations of the United States with all her allies, but especially Britain; Sir John Marriott, in **"Anglo-Russian Relations: 1689-1943"** (Methuen. 8s. 6d.), confines himself to considering the interaction of Britain and Russia. Sir John's outlook is historical, impartial, and realistic. The Anglo-Russian path has up to now been a stony one; the Crimea, Tsarist languishments after India, British intervention in the Russian civil war, and the whole tale of the Communist International have tripped up many a statesman. Sir John gives, of these and other things, a plain, straightforward, and valuable account, and comes to the cheering conclusion that the main causes of disagreement between Britain and Russia need no longer be active.

Lend-Lease, on the other hand, is a matter that might easily breed acrimony in the future, unless it is fairly presented, and properly understood now. Mr. Stettinius's book, an extract from which has already appeared in THE SUNDAY TIMES, does so present it. The author was responsible for the direction of Lend-Lease affairs and his book is partly autobiographical. All along Lend-Lease has been a two-way business; in the early days the United States, with its munitions, bought time, the least purchasable of commodities, as many an elderly and ailing millionaire has discovered. Now Lend-Lease is extended to cover all the Allies, and even in the material sense it is reciprocal. Mr. Stettinius's work is a magnificent summary of a masterly experiment, and a contribution to Anglo-American friendship.

So is Mr. John Michael Townend's **"Overture to Life"** (Rich and Cowan, 7s. 6d.). Mr. Townend spent his time training in the Fleet Air Arm in Canada and the United States. He says he expected to get a dime, and was given a dollar: he repays in words of gold.

Mr. P. P. Howe

Mr. P. P. Howe, who has died at the age of 57, will be long remembered for his classic life of Hazlitt, and for the scholarship which he brought to his great edition of that author. He will be remembered, too, as a publisher who cared passionately for literature: some of the notable authors of our time owe a debt to Howe for the encouragement he gave them in their early days. In 1938 he became a director of Hamish Hamilton Ltd., and in Great Russell Street possibly the happiest years of his life were spent. Before that he had a valued association with Martin Secker in John Street, Adelphi.

... enjoyable yarn.

* * *

It is difficult to know how to describe Miss Sebastian's "LET THY MOON ARISE." Allegory? Intoxicated fairy-tale? Whimsy? Sheer nonsense? I don't know. The odd thing about the book is that although Stephanie's most nightmarish adventures—after her father's death in Vienna she becomes successively a thief, a dressmaker's assistant, and a landlady's c o m p a n i o n—bring chuckles in their wake, there lurks in the background a suspicion of genuine pathos. Everybody the girl meets is more than a little mad, as she is herself, but—you read on and are left wondering whether, perchance, rather more of the world's workers than you had imagined are not so sane as they might be.

* * *

More than once Mr. F. L. Green has shown how skilfully he can conjure up an atmosphere of frightening suspense. In "ON THE EDGE OF THE SEA" he gives us the story of an English merchant who just before the war becomes involved in a plot to kill Hitler. The scene is a town in the North of England (where the Gestapo are less successful than they seem to be in their native haunts), and, as you expect, the story itself is carefully written and neatly worked out.

* * *

If "ST. MARTIN'S BEADS" is a romance on rather old-fashioned lines, it reads very well and ends on a note that is new. Hilary breaks off her engagement to the nice but elderly Sir Chris when she falls in love with the ambitious Dorne who is managing the baronet's Yorkshire works. Then Dorne's past rises up against him, and he goes too far. Politics and commerce play equal parts in a story which, if slightly improbable, is adroitly told.

... Richard Ameryk, for a complete year running from Michaelmas to Michaelmas.

It is interesting to note that while on the first two sheets the name is given as Richard A. Meryk, on the third sheet it is given as Richard Ap' Meryke. On the first sheet, which refers to the years 1496-7, Cabot's name does not appear, for it was in the latter year that he discovered Nova Scotia. But on the second and third sheets the fifth item records the payment of £20 in 1497-8 to "John Coboot," and the same amount in 1498-99 to "John Cabot."

This interesting document, which brings the names of Ameryk and Cabot into such intriguing contiguity, is normally on view in one of the exhibition cases in the Chapter House at Westminster, but it has now—with the rest of the Abbey Muniments—been evacuated to the country.

LAWRENCE E. TANNER
Westminster Abbey Library

"The Few" in 1794—

Sir,—It may be of interest to recall the units concerned, as given by Fortescue in his "History of the British Army": The Royal Artillery; 18th Foot (The Royal Irish), now disbanded; 50th Foot (1st Battalion Queen's Own Royal West Kent); 51st Foot (1st Battalion King's Own Yorkshire Light Infantry).

The remark your correspondent quotes was made by Sir John Moore in his diary after the surrender of Calvi on August 10, and it was in an attack on the fortress early in the siege that Nelson was wounded and lost the sight of his right eye. The actual losses due to enemy action were small, but the amount of sickness was terrible.

A. S. COTTON (Brig.-Gen.)
Bournemouth.

—And in 400 B.C.

Sir,—Your correspondent, Ernest Hutchings, makes interesting reference to the achievements of "The Few," by John Moore.

In this connection one may quote from Plutarch's "Life of Pelopidas," who, along with Epaminondas, broke Sparta's hegemony of Greece. Here are his words:

> For we can scarcely find any other examples where so small and weak a party of men by bold courage overcome such numerous and powerful enemies, or brought greater blessings to their country by so doing.

Mr. Churchill's memorable phrase is, I daresay, an unconscious paraphrase.

ANGUS ROBERTSON
New Barnet.

"Wait and See"

Sir,—In the "Oxford Dictionary of Quotations" the phrase "wait and see" is associated with the late Lord Oxford and Asquith. But the phrase can be traced farther back. Defoe, in "Robinson Crusoe" (1719), makes Crusoe say, "However, we had no remedy but to wait and see what the issue of things might present."

Perhaps some of your readers may know of still earlier instances of the phrase.

JAMES DUNDAS WHITE.
Chelsea.

Easter Offerings

Sir,—The time is approaching when the question raised last year by the Rev. J. E. Kent of Easter offerings and income-tax will again become of interest.

May I put a side of the question which I do not remember having seen ventilated previously, and that is this, that by claiming income-tax from Easter offerings to the incumbent the Government is really getting 9s. in the £ from the donors. This does not seem at all equitable from either's point of view as the whole of the £1 was intended as a gift.

GERALDIN C. LAMBLEY.

THE DELAYS IN PLANNING

SHORTLY after he became Minister of Reconstruction, Lord WOOLTON promised, for "soon after Christmas," a White Paper on the utilisation of land, and legislation during the present session. Exactly three months have passed since Christmas, and no one yet knows when the White Paper will appear. In a House of Lords debate last week Lord WOOLTON was "authorised to say on behalf of the Government" that they would make proposals to Parliament after Easter. At Westminster this formula is usually taken to mean before Whitsuntide. Lord WOOLTON would not pin himself down to that; and his caution was wise. Responsibility for delay does not rest on him specially; he is no doubt waiting, and waiting eagerly, for War Cabinet decisions on which policy can be based. Disappointment that these decisions have not yet been reached is widespread and permeates all parties.

Lord WOOLTON rightly said that the War Cabinet "has been concerned with issues other than the proper utilisation of land." Yet it is difficult to believe that these preoccupations fully account for the delays in defining land policy. We all want decisions, but we do not all want the same decisions. There are sharp differences about the principles and methods by which the use of land should be guided. With a Coalition Government, such differences cannot be shut out of the Cabinet Room. Land policy was not in mind when the present Government was formed. The one and only purpose then was to win the war as soon as possible. Now, though that has still to be achieved, it has become necessary to prepare for peace. One of the most urgent questions is housing; and that includes land. Of this it may be said with confidence that the longer the delay in dealing with it the more difficult will agreement become.

Lord BEAVERBROOK's vehemence stirs and stimulates even when he does not convince. In this debate his range was not short enough for persuasion; at some points he

so far is but the prelude to greater enterprises by the arm to which it falls to consummate victory by occupying the territory of the enemy.

Among all the soldiers whom we salute, special honour is due to those men and those military families who, generation by generation, have made the Army their profession, despite great public discouragement. There was never more discouragement than in this century, and in the last two generations, from men and women to whom the Army was in fact to prove a vital protection. But the nucleus was maintained at high efficiency, adapting itself continually to the intensifying changes of modern warfare, so that the vast improvisation, the making of soldiers out of civilians, could begin as soon as war came; and it did begin. It is a truly inspiring spectacle, what has been achieved in a few years by a nation whose predilection is not for war but very strongly set towards domestic peace and private life, whose soldiers' great desire is, in General MONTGOMERY's words, "to return to their peaceful pursuits."

The making of the Army, if it has had the main claim on the nation's energies, has had to be pursued concomitantly with the building up of a great war industry to keep it supplied. In this war, more than in any other, the whole people share the dangers as well as the toil. By a gradation which at no point utters a logical stopping place, claims to decorations for the Battle of Britain can be reasonably urged for service after service until millions of people would be included; and this consideration restrains the Government from awarding a special mark to men who as clearly engaged the enemy in a decisive and dangerous operation as did their comrades in any other theatre of war. But the civilian services will be the first to recognise how much it has meant to them to have been able to play their parts at home. With a sustained absence of home leave, such as the last war never saw, the men who ejected the Axis from Africa were away for years on end. The soldier is saluted not only for his valour and his skill, but for all that he gives up to attain that severely disciplined skill, and to expend it, in Libya or the Apennines, or in each strange successive theatre of this widely ranging war, wherever it can help to bring the military decision which determines the future for us all.

GREECE

THEIR Independence Day brings to Greeks everywhere to-day the reminder of a glorious past and hope for a great future. They have

GERMANY'S NARROWI[NG] CIRCLE

By SCRUTATOR

WHILE preparations for the West European campaign go steadily forward, Germany's situation is being rapidly worsened on two other sides—by the British and American air forces and by the Russian armies. Only in one region has her defence anything to plume itself on. That is in Italy, where the difficulties of the mountains and the weather still frustrate Anglo-American progress.

In the air the weight and continuity of the attacks increase from month to month. Gone are the days when American raids were confined to the nearer targets, and when occasional attempts to push them farther were heavily punished by German fighters. The American daylight range is now the same as the British night range; and there seem to be only three of the larger German cities—Breslau, Dresden, and Chemnitz—which as yet have escaped heavy air attacks.

On the Russian side the time-table has been much affected by the weather. The Ukraine did not have the intense frost and deep snow to which it is accustomed in winter. Mild rainy conditions during January hampered Soviet offensives in the more southerly sectors. But March brought compensation, since the spring thaw had not its usual material to work on, and so the condition of the roads, though muddy and difficult, has never amounted to the complete standstill which usually lasts for anything from three to six weeks at this time of the year. In the far north towards Estonia and Latvia it may be that the standstill is now beginning.

* * *

THE TWO THREATS

THE German public, therefore, sees two threats growing blacker—that of bombing from the air and that of invasion from Russia. There is little direct information about its reactions towards either, but what evidence we have suggests that the air peril is by far the more clearly realised.

And this is natural, because the bombers fly to the heart of the Fatherland, so that their mounting destruction cannot be hid and their daily menace overhangs everybody. Indeed the system of hourly warnings on the radio, to which the German authorities have now resorted, leaves nobody a chance of forgetting.

By contrast the Russian fighting remains far distant from Germany's frontiers. Between them and the Soviet territory stretches a broad belt of countries neither Russian nor German — the Baltic States, Poland, Slovakia, Hungary, and Rumania. Into this zone the Russian reflux has, as yet, reached only a short way—first into pre-1939 Poland and now into pre-1940 Rumania. It is easy therefore for the German Government to keep its people considerably in the dark about what is happening; as occurred last week, when its radio concealed from them the Russian passage of the Dniester.

always been Germany's war policy to
own land uninvaded by overrunning a

paign. While enemy soldiers still fight many hundreds of miles from Germany, enemy airmen fly over almost regardless of distance and destroy her towns. If the war ended to-morrow she would already be in a very different situation from 1919. But the future weight of the air war will greatly exceed the past. Less than two years ago we thought the R.A.F. had done something phenomenal when it dropped 1,000 tons on a target in a single raid. But as the months went past, the standard rose—first to 1,500 tons, then to 2,000, to 2,300, to 2,500. Last week over Frankfurt we passed the 3,000 mark.

Similar progress has been made by the Americans. When the Fortresses and Liberators first came to Europe, they were heavily armed against fighters, but not sufficiently armoured against flak; and by comparison with our own types they carried a very small bomb load. These points have now been rectified; they are better armoured and they carry much more weight. At the same time remarkable progress has been made with the design and use of long-range fighters, which are able now to escort and protect the bombers on their longest excursions.

* * *

COSTLY WITHDRAWALS

THE conception of an uninvaded Germany holding all her opponents at arm's length along defensive lines placed far beyond her own frontiers, stands in need, therefore, of some revision. Could it in any case be carried out? The difficulty would obviously be greatest on the Russian front, both because it is far longer than any Western front would be, and because the great plain of Eastern Europe offers few natural defences.

For this reason Hitler, it may well be thought, would have been wise after the decisive failure of his 1943 summer offensive to have withdrawn at once and in good order, with as little loss as possible, to a much shorter line—say, that from Riga to Odessa. Instead he practised the policyless policy of rarely giving ground anywhere, save as and when he was forced. The result is that to-day he has not the Riga-Odessa line to fall back on; it has already been breached. He has not even the line of the Dneister, which has been breached also. He is still entangled on a vastly longer front, and latterly his belated withdrawals have grown more and more costly. Those in the Ukraine last week seem to have been nothing short of routs, and the booty claimed by the Russians in the shape of tanks, guns, and motor vehicles is enormous.

The Germans cannot make good such losses of material. The British and American bombers have seen to that. The wealth of arms and equipment, which gave Hitler his victories, did not drop from heaven. It was made in the huge and highly efficient industrial establishments of the German cities which the bombers are daily destroying.

* * *

INTERPLAY OF LAND AND AIR

War in the Pacific

By SIR LIONEL HAWORTH

ADMIRAL NIMITZ has recently told us that the Japanese are not our chief enemy in the Pacific War. That honour is held by the one word—distance. Figures of distances are always a nuisance, but they are necessary for us to understand the Pacific War. Actually Honolulu, the capital of the Hawaiian Islands, is in round numbers 2,100 miles from San Francisco, 4,200 from Australia, 4,800 from Manila in the Philippines, 3,900 from Yokohama, and 4,700 from the Panama Canal. If we add that from New York to Liverpool is just above 3,000, it will help us to realise what these distances mean, and if we add that from Singapore to the east of New Guinea, with the Dutch East Indies stretching across the interval, is no less than 3,000 miles, it will complete the general picture.

The present fighting taking place in the north of New Guinea and the Solomons is at a distance of 4,000 miles from Japan, 5,000 from San Francisco, and 3,000 from the Hawaiian Islands *en route*, and, what is even more surprising, 1,500 miles from Brisbane in Australia by sea.

If we examine the map we shall see that our possible lines of advance upon Japan are determined by the conditions of geography. There are four natural approaches, which we are in a position to use. Two of these are island routes, two are mainly continental.

Of the island routes we have firstly the Australasian continental islands which gave, or were intended to give, the bases for the Japanese attack upon Australia, and which are now providing our line of island-hopping in offence, namely, New Caledonia, New Guinea, the Solomons, New Britain, New Ireland, and the Admiralty Islands, and, in the future, Timor, north of Darwen. These are connected with the defence of Australia, but are otherwise only a road to Asia. Adjoining these are the Asiatic group of the Dutch East Indies and the Philippines, which, true to their Asiatic character, provide bases for the actual attack on the mainland of Asia.

Ocean Stepping-Stones

The second route is the submerged mountain fold, covering 3,000 miles, which has provided the islands of the Carolines and the atolls of the Marshalls and the Gilberts. This line runs at a distance of from 800 to 1,200 miles north of the New Guinea group. It holds the mid-ocean bases of Palau, Yap, and Truk on the road to Japan, and lies on the enemy supply route to the present fighting. On its west at Palau it reaches to within 550 miles of the Philippines, and with the Mariana group to the north is providing the new line of island-hopping and leap-frogging, bringing us nearer to our objective. The American Navy has made the great naval base of Truk untenable for big ships, and we are now bombing the stepping-stones of Ponape and Kusaie.

At this point we reach a revolutionary fact which has changed the whole of the strategy of the war, not only in the Pacific but all over the world. It is the emergence of the long-range fighter in its new development—the power to meet the enemy fighters above their own bases and to destroy them.

Only a few months ago amphibious combined operations were confined to distances of under 100 miles, as Salerno taught us, since owing to the limitations of range the necessary air umbrella

Educational "Jargon"

To the Editor of THE SUNDAY TIMES

SIR,—Sir Ross Barker finds fault with much of the terminology of the Education Bill, and with some of his criticisms I agree; but there is certainly an advantage in getting rid of the term "elementary," with its associations of the bare "Three R's," its own particular code—all in a pen apart. "Primary" signifies what it is—the first stage of a broad highway leading to stage number two, the secondary. It is good, too, that "secondary" will describe a stage, not a school. "The public and secondary schools" is a phrase which one sees used by some who ought to know better, for are not Eton and Winchester to be found on the list of "efficient public secondary schools" published by the Board of Education? Yet half the world believes that secondary stands for "second-rate."

As for the "young people's colleges," the psychological importance of the name is great. I am told that in the East End the boy of fourteen thinks himself a man as much as any wage-earner, and would resent to be driven back into the classroom of a school, which he thinks to have left "for good" (perhaps in the full sense of the word). But the same boy will willingly attend a social club of his own choice, join evening classes there, and be very proud of what he feels to be "my club."

Now it is of the first importance that he should join a "young people's college" in the same spirit. He will have a good deal of choice of what he is to learn there, and will have his organised games, his clubs, and debates in connection with it, and (who knows?) his colours and his "old school tie." And it is something more than "school."

As for "Young People," what else can Sir Ross Barker suggest for the creature, male or female, between fifteen and eighteen—"adolescent"? Heaven forbid! and "child" is an absurdity. GUY KENDALL.

Witley.

Sir,—In regard to Sir Ross Barker's article, the following is from "Chinese Philosophy in Classical Times," by E. R. Hughes, M.A., of Oxford University:

"Tzu Lu said, 'Sir, the Prince of Wei is waiting for you to assume the administration. What will you do first?' The Master, Confucius, said, 'The essential thing is to rectify the use of terms.' Tzu Lu said, 'What, sir! You are speaking off the point. What has such a rectification to do with government?' The Master said, 'How unmannerly you are, Lu! When a man of breeding comes on anything he does not understand, he more or less blames himself. If names be not used correctly, then speech gets tied up in knots; and if speech be so, then business comes to a standstill. If that should happen, then the (order of) ritual and the (harmony of) music could not flourish; and if that should happen, the administration of justice would be wide of the mark; and if that should happen, the people would be tied hand and foot.'"

As Confucius lived about 500 B.C. apparently it is no new thing for Authority to use jargon to bind the people hand and foot.

Bearsden. F. MILLER RANKIN.

Sir,—Apropos of Sir Ross Barker's article, is there any hope of restoring the words "schoolmaster" and "schoolmistress" in place of "teacher"?

THIS PAGE IS DECLASSIFIED IAW EO 13526

pr[illegible] critic, with new ma[illegible] at others he overstated his own case. In reference to the Uthwatt Report he said that during the past eighteen months progress had been swift—remarkably so, seeing that Ministers "had no knowledge of land and land tenure at all." This really cannot pass muster. No knowledge? Yet they had the Report on which the Uthwatt Committee had worked for nearly two years; they had various other reports and recommendations; and, in addition, on great questions such as this, the Cabinet commands in Whitehall the best information and advice to be found anywhere. A Conservative Cabinet or a Labour Cabinet would in ordinary times have no difficulty in coming to decisions in a few weeks. Allowance must be made for the special difficulties of the present time: the War Cabinet's prime responsibilities are for the war, and this, as Lord WOOLTON hinted, must sometimes delay the effective consideration of other matters.

Lord BEAVERBROOK'S eloquent tribute to the Prime Minister has been nobly earned. But one point we hope he exaggerated. Mr. CHURCHILL'S renown in history will be as a leader in war: there he will always rank with CHATHAM and LLOYD GEORGE. In the planning for the home front, he must approve and have the last word about every main proposal; but he ought not to be expected to engage in this work so closely and regularly as Lord BEAVERBROOK pictured. For Mr. CHURCHILL must at all times be ready to put everything else aside and give his whole mind and strength to imperative, often intractable and sometimes prolonged emergencies of war. That is where his genius is most precious. The preparations for peace should go forward without impeding or hampering him in his war leadership.

NATION AND ARMY

LONDON this week, and all Britain in the next few weeks, will be inspired for an intensive Savings Campaign by the contemplation of the Army in the spring of the Army's great year. The Navy and the R.A.F. were the themes of earlier most successful campaigns. Both have expanded enormously in four and a-half years of war. Both have grown without losing their character as services of highly trained specialists. The Army of to-day is also an army of specialists, the young manhood of the nation, in their millions, devoting themselves to the mastery of modern war. The years of preparation now lie behind. They have been years of action too; the PRIME MINISTER told the House last week that already between three and four million men have qualified either for the 1939-43 or the African Star. Yet all that has been done

our warmest sympathy in the days of trial through which they are passing. Their King and Government and many of the leading Greek citizens are in exile; their fellow-countrymen who remain at home suffer the most cruel deprivations. But their deliverance will not be long delayed; there is good hope that before another Independence Day the enemy will have been driven from their land and its liberties restored.

Acknowledgment is due, and this is a time to make it, of the invaluable services which Greeks have rendered to the Allied cause. These services did not end when their country came under German occupation. Their Navy still plays a gallant part in the war at sea, their merchant fleet has been a most welcome reinforcement, and Greek soldiers in the Allied forces maintain their reputation for high courage. In the homeland the guerrillas keep up the fight against the invader. When peace returns Greece will have a record of courage and constancy and fortitude in war that will give her new prestige and power in the world, and also, we trust, bring happiness and prosperity to her people.

MILESTONES

VERY low down on the priority list stand the milestones, and they stand nowhere else to-day. Uprooted after long years of residence on the same spot, not helped by any regard for their long and faithful service, they were arrested and carried off for careless talking. Roads in 1940 did not care to say were we were going. But now the Parliamentary Under-Secretary for War Transport has thrown them a kind word in passing, and hopes local authorities will think in milestones once again, lest those once established landmarks, like so much else of the vocabulary of the King's Highway of old, become no more than metaphors for writing men.

But it is all too true that the milestones when they come back will find the world greatly changed to their disadvantage, for the young who have learnt to talk glibly and familiarly of speeds of 300 miles an hour will never reacquire the respect which man and beast used to have for the modest figures with which milestones, except for a few frantic boasters, were content. Even before the war, the motorist had begun to treat milestones like palisades, and to the air-minded generation they will seem quite ridiculously profuse. Perhaps that is a good reason for bringing them back sparingly, as treats, every five or ten miles, as a concession to the age of speed while retaining the measurement of space which suited the Romans and suited the Victorians and everybody in between, and suits this little island, even if it does not suit the denizens of the air to take their miles one at a time.

> *Remember them that are in bonds, as bound with them; and them which suffer adversity, as being yourselves also in the body.*
> —HEBREWS xiii. 3.

ring of other people's lands round about her and confining hostilities to them. The plan is well understood by the German people at large, and helps to explain their readiness to shoulder distant offensives. It was pursued in 1914-18, and as soon as it showed signs of breaking down, Germany surrendered, thus escaping all the battle-devastation which fell so heavily on France and Belgium. It may be that she will again surrender, once the land-war approaches her frontiers; and although this time the Allied armies will march to Berlin, their progress across Germany itself may be unopposed.

SCREEN ROUND GERMANY

IN conformity with these reckonings Hitler has now occupied and brought completely under his military control Hungary, Slovakia, and Rumania. Poland and the Baltic States, of course, were already in his hands, and probably he will grasp Bulgaria also. Their territories he hopes to use for his Eastern battlegrounds, just as he hopes that his Western battles will be confined to France, Belgium, and Holland.

What spoils the reckonings is the air cam-

U.S. FOREIGN POLICY

By WALTER LIPPMANN

In this article Mr. Lippmann is giving an American's view of American policy.

IN at least four serious controversies the United States have made it the issue whether they would recognise a particular government. Recognition of a government is at stake in Bolivia, the Argentine, France, and Italy. We can save ourselves misunderstanding and confusion if we remember that the State Department has come to attach an abnormal and extremely dubious significance and importance to recognition and non-recognition. In fact, it uses the right to grant, withhold, and withdraw diplomatic recognition as its main instrument of intervention and of control in our foreign relations.

When we refuse to recognise a government, in effect we invite its overthrow by revolution unless it yields. When we recognise a government we serve notice that we are opposed to its overthrow. Thus our peculiar doctrine of recognition is to a degree which most Americans do not perhaps realise a commitment in the internal affairs of other nations.

It is not hard to see how and why the State Department came to make such abnormal, inflated use of what ought to be a fairly ordinary and matter-of-fact matter. One of the greatest and proudest acts of the young American Republic was the recognition, in defiance of all Europe and in advance of England, of the independence of the South American Republics. The Monroe Doctrine was announced shortly thereafter to confirm the independence of our Latin American neighbours. Given by men who themselves had led a rebellion and had anxiously sought recognition as an independent State through emissaries to all the courts of Europe, diplomatic recognition came to be associated in American eyes with the creation of governments.

HISTORIC ABSURDITY

Nearly a hundred years later, under President Wilson, the notion took hold that if recognition could create a government non-recognition could uncreate it. Wilson practised non-recognition in Mexico, not very successfully, and in certain Caribbean States more successfully. The State Department became increasingly interested in non-recognition as a weapon. The reason was that it had no other weapons with which to back up its diplomacy.

During the period when the country was isolationist, unarmed, and pacifist the State Department discovered that it might by manipulating recognition exercise some diplomatic influence abroad. Now we are not isolationist but the member of a great a[lliance,] not pacifist but at war; and certainly n[ot un]armed. Yet the State Department, when it [cannot] think of what else to do or when it w[ants to] accomplish a great deal without seeming [to do] anything, still almost invariably plays a[...] its favourite piano, the doctrine of recognition. In the case of France, whe[re it is] becoming an historic absurdity and al[most a] scandal, it must be said that the State Dep[artment] would be willing to quit being so intricately [...]. It is now the President himself who has [...] bewitched by the possibilities of using thi[s weapon] in a kind of cat-and-mouse diplomacy. [That it] is a bad device, as we employ it and as th[e State] Department has taught our people to und[erstand] it, may be seen in Italy.

RUSSIA AND BADOGLIO

We have spent months being supe[r-subtle] about the recognition of the King and [Marshal] Badoglio, as if, by the exact shade and [...] of our diplomatic benediction, we could [...] the destiny of Italy. The Russians have s[...] in Italy watching us manipulating reco[gnition.] They have also watched us not carry out t[he spirit] or the letter of the Moscow Agreemen[t about] getting rid of Fascists. They also wante[d...] business in tangible things from Italy, i[n...] ships, in access to the Balkans, etc. S[o...] suddenly and brusquely they have s[ent an] ambassador to the King to whom we wer[e giving] 87.33 per cent. recognition on a continge[ncy] of ifs and buts and perhapses. The resul[t is that] since we have given the recognition such [...] significance the King and Badoglio are d[eeply in] debt—indeed mortgaged—to Moscow. Fo[r in] our absurd doctrine, to recognise means to [...] and support, not just to recognise, a fac[t that a] government exists while it governs w[here it] governs.

Soviet recognition, interpreted acco[rding to] State Department practice, is worth its w[eight in] gold to the King and Badoglio when the[y think] of what they face when they confront the [revolu]tionary masses of Northern Italy. T[he best] thing we could do is to revise our doc[trine of] recognition by deflating it. We have [made a] muddle with it in France and in Italy, [and the] quicker we get back to the simpler [...] practice the better. For our complicate[d ...] recognition is a revolutionary weapon w[hich we] cannot possibly use as shrewdly and e[ffectively] as the Russians can use it. So it will b[e better] if no one uses it.

HOW greatly and variously the Anglo-American air offensive has helped the Russians is still not sufficiently appreciated. In the first place it drew away the German aviation to such an extent that Russia was left in control of the Russian air; and that is why it is her Command, and not Germany's, which nowadays can bring off the big strategic surprises. The effect produced on Germany's other war equipment through the destruction of war factories has doubtless been more gradual; she could for some time meet her needs from stocks. But there seems evidence that it is telling now.

How far will it tell to assist our invasion? Strategically no doubt it must, though we may assume that for the start the Germans have accumulated ample materials as well as men to resist us. It remains a question how far a greatly superior air force can by tactical co-operation with troops offset fortifications, communications, and all the many advantages that a land army possesses over a landed one. On this point our recent Italian experience warns us not to be over-sanguine. Our air forces probably saved the Anzio beach-head. But they have not enabled our troops to enlarge it.

fighters provide shelter as far as Berlin. To-day we can cover the distance between the islands, and in consequence island-hopping, which was considered slow and undesirable, becomes, especially when combined with leap-frogging, not only expeditious but a sure means of sapping enemy positions and cutting their lines of supply. The Japanese, depending upon the distances, have not gone to the expense of making good air-fields even upon Truk, but with the use of bull-dozers we shall be able to construct suitable airfields, and Palau will enable attacks to be made direct upon the Philippines.

The object of the attack on these two island routes is to cut the line of Japanese supplies, to drive their armies out of the positions they have occupied, and thus to open the way to our main object, the invasion of Asia. We are at present only in the preliminary stages of this work, notwithstanding the great success that we have achieved.

Attack from the Mainland

But it is evident that the defeat of Japan can be attained only from the mainland of Asia. For this there are two continental lines of approach: first by means of Burma, secondly by the ultimate objective, China. For this we shall use the same means that Japan employed, but in reverse, *i.e.*, the means of combined operations of the three arms. (It is only in the north of Burma that purely land operations can be put into practice in order to open up the Burma Road of communications with China and so enable the Chinese army to assist in the main operations from the rear.)

The combined attack on Burma can be made at two points: along the south by the line which the Japanese took between Rangoon and Moulmein, or either on the southern extension of Burma near Mergui, where the narrow peninsula is but 150 miles from Bangkok, or perhaps south near Victoria Point, where the peninsula is only thirty miles across and connects with the land route and the railway from Siam to Malaya. The country in these regions is covered with dense jungle, but it is not more thick than that through which the Ledo Road in Burma has been constructed, while the route is shorter and less mountainous in both instances. Point Victoria is only 350 miles from Penang by air.

Akyab, the valuable sea and air port on the east coast of the Bay of Bengal, must also be mentioned. It lies in the Province of Arakan, which is cut off from the rest of Burma by high

Yet the State Department, when it cannot think of what else to do or when it wants to accomplish a great deal without seeming to risk anything, still almost invariably plays a solo on its favourite piano, the doctrine of non-recognition. In the case of France, where it is becoming an historic absurdity and almost a scandal, it must be said that the State Department would be willing to quit being so intricately subtle. It is now the President himself who has become bewitched by the possibilities of using this device in a kind of cat-and-mouse diplomacy. That it is a bad device, as we employ it and as the State Department has taught our people to understand it, may be seen in Italy.

RUSSIA AND BADOGLIO

We have spent months being super-subtle about the recognition of the King and Marshal Badoglio, as if, by the exact shade and flavour of our diplomatic benediction, we could regulate the destiny of Italy. The Russians have sat there in Italy watching us manipulating recognition. They have also watched us not carry out the spirit or the letter of the Moscow Agreement about getting rid of Fascists. They also wanted to do business in tangible things from Italy, in naval ships, in access to the Balkans, etc. So quite suddenly and brusquely they have sent an ambassador to the King to whom we were giving 87.33 per cent. recognition on a contingent basis of ifs and buts and perhapses. The result is that since we have given the recognition such exalted significance the King and Badoglio are deeply in debt—indeed mortgaged—to Moscow. For under our absurd doctrine, to recognise means to approve and support, not just to recognise, a fact that a government exists while it governs where it governs.

Soviet recognition, interpreted according to State Department practice, is worth its weight in gold to the King and Badoglio when they think of what they face when they confront the revolutionary masses of Northern Italy. The best thing we could do is to revise our doctrine of recognition by deflating it. We have made a muddle with it in France and in Italy, and the quicker we get back to the simpler normal practice the better. For our complicated use of recognition is a revolutionary weapon which we cannot possibly use as shrewdly and effectively as the Russians can use it. So it will be better if no one uses it.

Recollection of 1917

(In Memoriam S. H. S.)

"It seems ridiculous," Charles said to-night,
"But even now, whenever I come here,
I start to ask the porter whether Stanley
Is in the club or has he left a message,
And then I stop and feel a fool."
We nodded,
Knowing that most of us had done the same,
Though Stanley never came back from Dieppe.

This is a way in which the best die hard.
For them the battle and the pang are done,
But, though they see their friends no more, their ghosts
Still haunt the saddened memories of their friends,
And often, for one breath, seem still to live.

As Charles was speaking, I began to dream
Back to a day in 1917.
Across that crowded street I glimpsed a friend,
Knew the long stride, knew the free-blowing hair,
And ran to catch him up. And then I halted,
Dazed and bewildered midway in the traffic,
Having remembered that Rupert Brooke was dead.

EDWARD SHANKS.

fessional enthusiasm to be labelled "certificated male teacher": and the imparting of information or skill, which the word "teacher" denotes, is only a part, and often the smaller part, of a schoolmaster's job.

Those who limit their work to the classroom and regard outside activities as an unwarranted imposition may be content to be called teachers; but the strength of English education lies largely in the fact that the majority of schoolmasters and schoolmistresses have rejected this limitation, and have voluntarily undertaken wider responsibilities. The more honourable title should be a recognition of and an invitation to the more important work.

R. KENNARD DAVIS.

Magdalen College School.

The Tank Debate

Sir,—You will, I hope, pardon me if I point out that your leading article last Sunday was based on three words uttered by Mr. Churchill, used out of their context, and gives a false impression of the facts. You say:

> Mr. Churchill repudiated the charge and declared that our tanks are "at least equal" to those of any country in the world.

But what Mr. Churchill said was:

> I refute the allegation. The next time the British Army takes the field in countries suitable for the use of armour, they will be found to be equipped in a manner at least equal to the forces of any other country in the world.

—a very different matter.

I agree that the debate is untimely. It should have happened years ago. You say, "What injury may it not inflict? . . . The news will spread through the Forces, 'Something wrong with our tanks,' etc." But surely, those who have to fight with inadequate weapons know all about it already. It is common knowledge that, during the Battle of Africa, our forces were dependent on American tanks—and that after four years of war.

London, W.2. C. H. SALTER.

"The Might of the Tiger"

Sir,—Lt.-Col. G. H. Bland accuses Viscount Wavell of "a slight inaccuracy" in saying that seasoned British troops in Palestine were replaced by fresh Indian troops from India in 1918, "unseasoned and untried," and he points out that the veteran 52nd and 74th Divisions were replaced by the equally veteran 3rd Lahore and the 7th Meerut Divisions from Mesopotamia.

Viscount Wavell, however, was B.G.G.S. of XX Corps at the time and is not the sort of man to make a mistake. In fact, the whole force was stripped of its British battalions to help stop the German break-through in France. The 10th Irish, 60th London, and 53rd Welsh were entirely changed and filled up with new Indian battalions who had no experience of war, while the 75th Division was similarly treated except for the 2/3rd Gurkhas, the 58th Vaughan's Rifles, and the 123rd Outram's Rajputana Rifles. Never were veteran divisions so butchered for needs elsewhere. One composite battalion of the original British battalions was left with each brigade. As one who served with the 20th Indian Infantry Brigade from the Suez Canal to Amman, the writer is qualified to know what happened, but he has taken the opportunity to make sure by looking up Allenby's despatches. The success of this extemporised army is a good augury for the new two million strong Indian Army, but officers are the difficulty. We have no longer the men who made the old Indian Army Reserve of Officers so valuable with their knowledge of the people, their languages and customs.

A STATE THEATRE

The Case For & Against

By SYDNEY W. CARROLL

MUCH depends upon what is meant by the description "A State Theatre." A theatre may be considered in its purely architectural sense. It has also the meaning of an artistic movement, involving simply the work of static or travelling companies of players. "A State Theatre" may cover the control of a series of theatres located in different parts of the country, but all either subsidised or financed by the Government or the municipalities, and dependent in the final result upon either a Ministry of Fine Arts or some Ministerial department exercising control over all theatrical matters.

For the purposes of discussion I am assuming the intention to have a National Theatre edifice in which will perform regularly for the public benefit companies of State-paid artists under the management of a State-paid director controlled by a State-appointed committee, responsible in the last resort to the Government of the day.

Let me state, first of all, my ideas of the case for such a building and such a State organisation. No one will be prepared to deny, I imagine, that it is a definite responsibility of the State to encourage the principles of culture and civilisation in the people. We have our State art galleries, our State museums, our State academies of music, and even of dramatic art; we have our State libraries and the new organisation known as C.E.M.A., a Council for the Encouragement of Music and the Arts, which receives funds from the Government for this specific purpose. Why should we not have at least one specific National Theatre in order to supplement and complete all these cultural aims?

A Wide Range

A NATIONAL Theatre would provide the most practical, effective, and pleasing method of getting the highest standard of English speech, of fixing standards in dramatic literature and poetry, of establishing standards of acting, not as mere mimicry, but as a revelation of human interests, emotions, passions, and capacity. A National Theatre, properly conducted, can put the public into touch with all classical dramatic endeavour from the work of the ancient Greek theatre up to the most modern of modes. The historical drama, the poetic drama, the morality play, the problem play, the play of ideas—all these reveal the human intellect in quick, active play and in its highest forms.

England's greatest writer, William Shakespeare, was a man of the theatre. He was not selected for their value as a team, be broadcasted and televised to the whole nation. A National Theatre must have its definite repertoire of first-class plays, ancient and modern, ready to put on, rehearsed to the last minute, and produced by the most brilliant producers and with different companies.

There is no better way of educating young people than through the theatre when properly run. It must not be thought of simply in terms of bricks and mortar, but it cannot reach its proper dignity and highest efficiency without a perfect theatre for the actors' work.

A National Theatre is required by the nation to keep alive not only the most popular and profitable plays of Shakespeare, but his lesser known works and the lesser known works of the classical English playwrights. We need a National Theatre to encourage our most brilliant modern living authors to devote their time and talents to writing new plays for production by the State.

At no time in our history was a National Theatre more needed than it is at this moment. We have seen civilisation overthrown. We have watched barbarism triumph and cause the mutilation and death of millions. The fading light of culture threatens to be extinguished by an invading interest in mechanics and paralysing science.

I now come to the case against.

The Other Side

IS there any general public demand for a National Theatre? No. If you are to have a National Theatre, why not a National Cinema? Surely the greater public interest in the cinema and the need for counteracting Hollywood influence on British mentality makes that of greater importance. Taxpayers are already overburdened with State obligations. Why add another on what, after all, is to so many minds only a pleasure and mental relaxation? We are proposing to increase the taxpayers' burdens by hundreds of millions in the cause of education. Why not rest content with the educational side of the question?

Who is there capable of directing such a theatre? Who are the people practical enough, qualified enough, and free enough from cranky notions and fads to serve on the committee? What security can we have that a National Theatre will not be used by the Government of the day for political and other propaganda? The theatrical art is an individual art. It depends upon the exploitation of personalities, the

"SALUTE THE SOLDIER"

£32,000,000 LEAD BY LONDON

Enthusiastic scenes marked the opening of the "Salute the Soldier" week for London and Greater London in Trafalgar Square yesterday. The target aimed at is £165,000,000.

Lord Kindersley, president of the National Savings Committee, announced that the £32,460,327 raised to midday brought the total savings since the war began to just over £7,000,000,000.

Stepney has already exceeded its £1,000,000 target, raising £1,042,746. Westminster, which is aiming at £10,000,000, had reached £4,316,000 at 4 p.m.

Thousands of people, including many who had come up specially from the country, crowded Trafalgar Square to hear Field-Marshal Sir Alan Brooke, Chief of the Imperial General Staff, who spoke from a raised platform against a background of field guns.

He said: "Our savings must be measured by the effort and sacri-

CASSINO DEFENCE AIDED BY SECRET PASSAGES

FROM OUR SPECIAL CORRESPONDENT

ALGIERS, Saturday.

An elaborate system of secret underground passages, built in the 16th century during searches for buried treasure, may explain the German three-months' defence of Cassino, the escape of the garrison during the shattering bombing of March 15, and, since then, its uncanny mobility and capacity for reappearing in areas believed to have been cleared.

Reports of the existence and enemy use of these passages have been current for some time, but intelligence officers have hitherto been sceptical.

Now, however, the story seems to be at least provisionally accepted, and an official said: "The nature of enemy movement within Cassino and local information have strengthened the reports that a number of tunnels exist in the town and its vicinity, of which effective use is being made by the enemy in his stubborn resistance."

Inhabitants of the town have long believed in the passages. One is said to run for more than 1,000 yards from the Abbey, on the top of Monte Cassino, to the vicinity of Point 193, which is in Allied hands.

ROUTES FOR SUPPLIES

Another is reported to connect the Point 193 area with the Continental Hotel, one of the enemy's strong points south-west of the town, and a third to go from the Hotel to the Coliseum, another strong point, nearly a mile to the south.

WILL RUMANIA BREAK AWAY?

Germans' Anxiety Obvious

By V. V. TILEA,
Formerly Rumanian Minister in London

We are approaching the third and last phase of this war. The first was the years up to El Alamein and Stalingrad, when Germany was convinced that she would win. The second began with her defeat in Africa and on the Volga, but the Nazis still believed that at least they could not lose.

And now, with the last effort to maintain by force the collaboration of their crumbling satellites for the replenishment of their larder and of their need for cannon-fodder, we may at any moment enter upon the third and last phase, in which the majority of the Germans will be convinced that they have lost the

GERMANS BEWILDERED IN THE UKRAINE

Soviet Superior In Tactics, Arms And Morale

From ALEXANDER WERTH,
"The Sunday Times" Special Correspondent

MOSCOW, Saturday.

Ten days I have just spent on the Second Ukrainian Front with Marshal Koniev's troops have been one of the most revealing experiences I have had in this war.

I was there at the height of the offensive which began on March 5. During those days Marshal Koniev's troops routed the greater part of eight German tank divisions, five infantry divisions, one paratroop division acting as infantry, one "flak" division, and other smaller units.

Over an area of 50 miles north and south of Uman, which I was able to survey from a jeep or, when this failed owing to the terrain conditions, from a low-flying U2 hedge-hopper two-seater biplane, many thousands of German lorries and tanks and other equipment are scattered. An immense trail of cars, lorries and tanks is left behind by that German army which fled to the River Bug and beyond it to the Dniester, right into Bessarabia.

SURPRISED GERMANS

Marshal Koniev, having crossed the Dnieper in one of the boldest operations in military history, undertook the March offensive against the German line south of Korsun when the Germans were least expecting it.

This was typical of his methods. He simply defied all that the German military experts believed—that no one could start a large-scale offensive through that immense sea of mud into which the whole Ukraine had been turned by a premature thaw. The Germans were so sure about it that they removed most of their tanks to repair depots 20 miles behind the front lines.

In three or four days the German army was not only on the run but was abandoning tanks and lorries by the thousand, because the thick, gluey, black Ukrainian mud had made anything resembling an orderly retreat impossible. What is more, the German troops had been psychologically undermined by the thought of a "second Stalingrad," and the fear of encirclement had become an obsession to them.

There are several reasons why the Russians are able to advance rapidly where the Germans are not able even to retreat except in chaotic flight. One is that the initiative is entirely in Russian hands and that they are striking out with a mobility and unexpectedness that cause complete bewilderment among the Germans.

RUSSIAN ENDURANCE

Secondly, Russian morale is extremely high. This is due to the thought that this is definitely the last lap in the process of the libera-

to feel a serious shortage of man-power and equipment. Tank divisions have now a complement of only 176 tanks, but usually half or two-thirds of these are unavailable, being at the repair shops.

It is true this weakness is to some extent compensated for by the introduction of a large number of mobile guns, and in a tank division now the proportion of tanks and mobile guns is usually 50-50.

Altogether the Germans are concentrating far more than before on all forms of artillery, but the quality of their relatively inexperienced artillerymen is much lower on the average than that of the Russian artillery. This shortage in heavy equipment is largely attributed by a prominent member of Marshal Koniev's staff to Allied bombings.

The Russians have complete air superiority in the Ukraine.

HIGH CASUALTIES

In the second place, as distinct from the first two years of the war, the German casualties are now unquestionably higher than the Russian.

As regards German reserves, Col. Kalinin, of Marshal Koniev's staff, said that the Germans were having great difficulty in filling their human losses from reserves. Whereas in 1942, and even in 1943, losses were rapidly replaced 100 per cent., now the process was slow and incomplete.

Poor quality training was also common in the German Army among new recruits, he added. Particularly was there a serious shortage of good artillery and machine-gun men. The average size of a German infantry division, including everything, is now 7,000.

GERMANS STAND ALONE

A third point is that, so far as the actual fighting is concerned, the Germans now stand almost alone. I talked to a large variety of prisoners, and it is clear that not only have the Rumanians no further intention of fighting for Germany but that the Austrians have gone completely defeatist.

Among the Germans, on the other hand, I found a much more complex state of mind: a realisation that Germany was steadily losing the war: acute disappointment over the loss of the Ukraine, a disappointment expressing itself in innumerable ditties saying farewell to the good Ukrainian food.

There was little denunciation of Hitler, and great hopes in the Allies quarrelling. As one young man

CASSINO DEFENCE AIDED BY SECRET PASSAGES

FROM OUR SPECIAL CORRESPONDENT

ALGIERS, Saturday.

An elaborate system of secret underground passages, built in the 16th century during searches for buried treasure, may explain the German three-months' defence of Cassino, the escape of the garrison during the shattering bombing of March 15, and, since then, its uncanny mobility and capacity for reappearing in areas believed to have been cleared.

Reports of the existence and enemy use of these passages have been current for some time, but intelligence officers have hitherto been sceptical.

Now, however, the story seems to be at least provisionally accepted, and an official said: "The nature of enemy movement within Cassino and local information have strengthened the reports that a number of tunnels exist in the town and its vicinity, of which effective use is being made by the enemy in his stubborn resistance."

Inhabitants of the town have long believed in the passages. One is said to run for more than 1,000 yards from the Abbey, on the top of Monte Cassino, to the vicinity of Point 193, which is in Allied hands.

ROUTES FOR SUPPLIES

Another is reported to connect the Point 193 area with the Continental Hotel, one of the enemy's strong points south-west of the town, and a third to go from the Hotel to the Coliseum, another strong point, nearly a mile to the south.

WILL RUMANIA BREAK AWAY?

Germans' Anxiety Obvious

By V. V. TILEA,
Formerly Rumanian Minister in London

We are approaching the third and last phase of this war. The first was the years up to El Alamein and Stalingrad, when Germany was convinced that she would win. The second began with her defeat in Africa and on the Volga, but the Nazis still believed that at least they could not lose.

And now, with the last effort to maintain by force the collaboration of their crumbling satellites for the replenishment of their larder and of their need for cannon-fodder, we may at any moment enter upon the third and last phase, in which the majority of the Germans will be convinced that they have lost the

Planning A New Plymouth

The above scene represents the heart of Plymouth, three years after its devastation in a series of raids.

A great area lies in crumbled ruin. Across the centre of this district stood George Street, at one time a fashionable and busy shopping street. In the middle distance the tower of the parish church of St. Andrew rises above the burned-out shell of the church. Alongside are the remains of the Guildhall, the tower of which has survived.

Next month the plan for the new Plymouth, prepared by Professor Abercrombie, the town-planning expert, and Mr. J. Paton Watson, Plymouth city engineer, is expected to be presented to the City Council.

Simultaneously an exhibition will be staged in Plymouth Art Gallery. Models will explain the principles of the plan and show what the future of the city is likely to be.

YESTERDAY'S SPEECHES

SIR STAFFORD CRIPPS, Minister of Aircraft Production, at Prestwich:

Discipline yourselves to take your part in the life of the country, because some form of discipline is essential if we are to survive as a country; and if we won't discipline ourselves voluntarily under a democracy someone else will discipline us under a much harder

only a playwright, but an actor, and his numerous works provide a repertory which of themselves might be sufficient to keep a National Theatre very busy. But the work of a National Theatre should cover the whole range of dramatic creations, British and foreign, Western and Eastern. A National Theatre, properly run, would provide foreigners from all parts of the world with an opportunity of realising the greatness of the English character, the magnificence of its theatrical record, the beauty and sublimity of its dramatic poetry, the rich sympathy and humanity of its finest playwrights.

My idea of a National Theatre edifice is that it should be the finest building of its kind ever constructed or ever conceived. It should draw devotees of art and culture from all over the world to London, as Mahomedans are drawn to Mecca. It should not be merely architecturally splendid and overwhelming in its beauty: it should be fitted with all the latest electrical and mechanical devices. It should aim at combining the maximum of efficiency and practical working with aesthetic charm. It should be placed in the centre of London, which is the centre of our great Commonwealth.

International Art

IT should not be, despite its national character, merely a national voice; it should have the voice of international art. It should be an apotheosis of drama, music, colour, rhythm, and science. It should be fitted up as a television centre, so that when television arrives in its full significance it will be possible for every home in the country with a television set to see and hear in colour everything that is happening in the great central National Theatre. And not only should the building be the most perfect of its kind in every detail, but the company of artists should be a team of players of unsurpassable quality.

In this way, and this way alone, can the great classical works, interpreted by a company of supreme and superlatively trained artists, all unfettered creative instinct of the artist. It should be released from all bureaucratic control and find its own method of expression.

The experience of State theatres in France, in Germany, and elsewhere provides a warning against a similar enterprise in Britain. A National Theatre would be a temptation to the policy of the highbrow, the literary cults. The drama is the greatest of the arts, and it must not be limited by architecture or any other kindred art in its expression. There would be a natural tendency for the National Theatre to be a home for uncommercial and unprofitable plays. It would be a recommendation to a piece that only a limited number of people wished to see it.

National Benefit

MOREOVER, we have a well-founded national attitude of distrust of the influence of Governments in the realm of the arts. Privilege applied to art has always been a menace. In the old days, when Covent Garden and Drury Lane were State theatres and possessed privileges not granted to other theatres outside a certain area, they maintained the life of the drama, but could not be said to elevate it.

We have had a plan for a National Theatre in this country for at least two generations. The public has never been able to make up its mind to subscribe even £200,000. The National Theatre Committee has produced a programme of a most attractive kind and made all sorts of alluring promises, but so far it has only managed to acquire a quite unsuitable site of insufficient area, in an inconvenient neighbourhood, and such money as it has received is altogether inadequate and has been put into the bank for a distant and problematical benefit.

Viewing the question dispassionately, I am, however, of the opinion that a National Theatre, despite all the objections that may be raised to it, is a national necessity, and would if properly directed prove a positive national benefit from all points of view.

fice we are expecting from the soldier. Our sentiments, to be of the true value, must take a material form to assist in providing the soldier with those arms and equipment on which his life and our country's security depends."

"£200,000,000 DREAM"

The following are points from speeches at other centres:

Lord Mottistone, at Hammersmith: The Prime Minister, the Chancellor of the Exchequer, and Gen. Montgomery have appealed to all of us to make this week the true symbol of our determination to help our hard-pressed soldiers throughout the world in the hour of trouble. London can give a resounding answer, perhaps, I dream, with nigh £200,000,000.

Gen. Sir Walter Kirke, at Putney: To-day the army in this country faces the greatest and most difficult operation in the history of the war—an invasion of the continent of Europe, which is armed with every device known to Hunnish ingenuity. It must not fail.

Gen. Sir Frederick A. Pile, Chief of Anti-Aircraft Command, at Brentford and Chiswick: In the winter of 1940-41 the Germans had considerable contempt for our defences and if they wanted to bomb a town hall they flew straight at it, regardless of the ack-ack, and took deliberate aim. To-day, thanks to the great improvement in weapons and instruments, the German raider is continually taking evasive action.

Col. Llewellin, Minister of Food, at Uxbridge: While it is no secret that we are massing great forces in this country, what is a deep, carefully guarded secret is where they are going and when. There is no man or woman who would wish the men to embark on their great enterprise short of anything they may need, no matter how small.

Viscount Bennett, at Finchley: After Dunkirk we had no equipment left. All we had to defend us were a few soldiers who had come from Canada. Now we have air mastery over the Germans and the result is that our casualties are comparatively small. Our soldiers are now getting better equipment than our opponents.

Col. Arthur Evans, M.P., at Penarth: Our fighting men are ready for the greatest military enterprise of all time. New methods and tactics will be employed, new and secret weapons which have only been made possible by the courageous ingenuity of British scientists, the sweat of British workmen, and the savings of the British people.

TATTOO TO-DAY

A military tattoo, in which 750 members of the Forces will take part, will be held in the Cockpit off Serpentine Road, in Hyde Park, at 3 p.m. to-day. There will be massed military bands, community singing, a demonstration of the loading of London's A.A. guns, and another of Army physical training by 250 staff instructors.

war. A military occupation of Hungary, Rumania and Bulgaria after the more lenient vassalage of the past, can only increase the discontent in those countries, intensify sabotage, and, at last, create open revolts.

AWAITING OPPORTUNITY

The majority of the Rumanians who form public opinion always desired an Allied victory, and, after Stalingrad, Smolensk and Kiev they had no more doubts of the German defeat. If they hesitated to "pay their passage home" it was only because they had no outlet to, or connection with, any of the Allied armies.

An invasion of the Balkans would have immediately created the necessary reaction in Rumania and possibly also in Hungary and Bulgaria. There being no invasion the Rumanians had to wait for another opportunity of breaking away from the alliance forced upon them by Germany.

In present circumstances, when nearly a million German soldiers will be occupying the country, not primarily for the sake of defending it but in order to keep Russian troops as far as possible from the vital oil-fields, and from German territory, such action must be extremely difficult and dangerous. It might well mean the thorough devastation of Rumania.

PRINCE'S DISCUSSIONS

Yet Prince Stirbey, an intimate of the leaders of the Liberal Party, and General Manolescu, a faithful member of the National-Peasant Party, who accompanied Stirbey, could not have left Rumania without (in spite of repeated denials by the Antonescu Government) the knowledge of Marshal Antonescu himself. Whether they were given full powers by the two Opposition parties, and from the Government as well, remains to be seen, but it is certain that all Rumanians are looking anxiously to the results of such discussions, especially after the announcement by President Benes that Russia is prepared to return to Rumania the northern half of Transylvania.

German anxiety is shown by their broadcasts a week ago that General Dumistrescu is continuing his talks for the formation of a Government more friendly towards the Reich." The fact, also announced by the German radio, that the retreating German troops "had, unfortunately to use their arms for clearing the roads of Rumanian refugees," will certainly not help in the formation of a "more friendly Government," and will be a further incentive to the Rumanians to break away from Germany.

As matters stand, and in spite of the obvious great difficulties, it seems not unlikely that Rumania, led by some courageous and determined men, will soon break away. This would, undoubtedly, shorten the third and last phase of the war.

Even if Horia Sima is put into power, as Ankara announces, it will merely delay events which have to come.

Cassino is certainly a likely setting for such passages. It has been inhabited for over 2,000 years. Popes and emperors have held courts there, and for 1,400 years the Abbey has been the home of a wealthy religious order.

But the Germans kept the town supplied and reinforced. After the bombardment of the 15th—the heaviest ever made on so small an area—they were still in the town and fighting hard when our infantry advanced. Since then, they have persistently reappeared in areas which have been mopped up and have got supplies and reinforcements to places where the garrisons were hanging on precariously.

HEAVY FIGHTING CONTINUES

Yesterday's communiqué from Mediterranean Allied Force Advance H.Q. stated:

LAND.—Heavy fighting continues in Cassino, where the general situation remains unchanged.

Despite cold rain in the lowlands and snow in the mountains, our patrols were out in all sectors.

The artillery and mortars of both sides were active on the 8th Army front.

AIR.—Yesterday, medium bombers of the Tactical Air Force attacked shipping and docks at Leghorn and rail facilities at Orvieto, Sulmona, and Fano. Shipping off the west coast of Italy and off the Dalmatian coast was attacked by fighter-bombers, which also struck at troop concentrations in the Cassino area.

Heavy bombers of the Strategic Air Force attacked the rail yards at Rimini and Ancona. During the day 19 enemy aircraft were destroyed. Eleven of ours are missing.

M.A.A.F. flew over 1,500 sorties. Eighty-five enemy aircraft were active over the battle areas during the daylight hours.

PREMIER'S CALL TO GREEKS

Mr. Churchill has sent a message on the occasion of the 123rd anniversary of Greek Independence Day, which is being celebrated to-day. In it he expresses Britain's sympathy for the Greek people in their present sufferings and hope and encouragement for the future.

After paying tribute to the part the Greek armed forces have played in the Allied successes during the past year, he adds:

"I have read with pleasure of the agreement signed by the guerrilla leaders on February 29. Now that they have composed their differences I trust that they will direct all their efforts against the common enemy. The Germans have already learned on the Pinios River what they can do, and other such blows will, I hope, follow until the last Nazi has been expelled from Greece.

"The day of liberation is approaching and all lovers of Greece hope to see her once again united and free."

WAR IN THE PACIFIC

By SIR LIONEL HAWORTH

Continued from Page 1

mountain and forest. We are attempting to capture it by land from India, but it is very possible that we shall have to use combined operations. The port is only 350 miles from Rangoon by air.

The second continental attack, entailing China as the direct objective, could be attempted only after Singapore and Sumatra had been regained.

In these combined operations we have to consider distances by sea and the weather. The sea route from India to Rangoon is, according to the ports used, about 750 miles; from India to Mergui or to Victoria Point 1,250 miles; from Ceylon to Penang 1,300, and to Sumatra 1,200 miles. The capture of the Andaman Islands would provide an advanced base 400 miles from Rangoon and 600 from Penang. Beyond lie the Nicobars, 456 miles from Penang, and but 140 from Sumatra, but their water supply is not good, though the harbours are excellent. It is clear that for all these distances a very great armada of shipping would be required while the monsoon would make an operation impossible of execution between May and the end of September.

It will be seen then, that the four lines of attack are complementary, and the two by the islands and the two by continental attack are necessarily conducted by separate commands, if only for the distances involved. It is highly possible that the attacks along the island routes will have to be pushed considerably forward before the continental attacks can be considered in the south except in preliminary operations.

In conclusion we can say definitely that the shipping required could hardly be collected until Germany has been dealt with, for we have other fronts which demand supplies and transport.

ITEMS FROM HOME AND ABROAD

Miss Florence Horsbrugh, Parliamentary Secretary, Ministry of Health, is leaving shortly for a three weeks' tour of Canada.

The "Ten Little Niggers" company from the Cambridge Theatre is giving a performance to-night at Bomber Command H.Q.

16s Register.—Boys and girls born between February 27, 1928, and March 25, 1928, registered yesterday at Ministry of Labour offices.

Father Edward Ellis, Administrator of the Roman Catholic Cathedral, Nottingham, has been appointed Bishop of the diocese.

Balkans Crash.—The Sofia-Istanbul express was derailed on Thursday night after crossing the Turkish border. Several coaches rolled on the embankment, but there were no casualties.

DEAT'S POLICY

ALL-OUT SUPPORT FOR GERMANY

Marcel Déat, French Fascist leader and new Vichy Labour Minister, declared yesterday that he was ready to enforce a new all-out pro-German policy in France.

"France can no longer afford to be a political no-man's-land," he declared, according to the German News Agency. "Attentisme" ("Wait and See" policy) "is finished here.

"Three great tasks confront me: To mobilise French workers for Germany and for French industries working for Germany, to adapt wages and salaries to the cost of living; and to speed up the introduction of the Labour Charter."

EIRE MUST FEND FOR HERSELF

DE VALERA'S CALL

Mr. de Valera, speaking at Galway, yesterday, said that for her safety Eire needed to sow one and a-half acres of wheat for every acre last year. More potatoes, barley, and oats were also needed.

Now less than ever could they look for food from abroad. The production of food and fuel was as essential to national security as defence measures through the armed forces. If they had no food they would have to go begging it, and, sometimes, people who went begging were answered as a beggar.

EIRE MUST FEND FOR HERSELF

DE VALERA'S CALL

Mr. de Valera, speaking at Galway, yesterday, said that for her safety Eire needed to sow one and a-half acres of wheat for every acre last year. More potatoes, barley, and oats were also needed.

Now less than ever could they look for food from abroad. The production of food and fuel was as essential to national security as defence measures through the armed forces. If they had no food they would have to go begging it, and, sometimes, people who went begging were answered as a beggar.

and unhappier form of control.

Look at all the problems of the future not from a selfish, personal or sectional point of view, but from the angle of what is best for the country as a whole. You can never arrive at a sound judgment upon any of these matters unless you have some firm basis by which you can judge right from wrong and justice from injustice. Our religion supplies us with that means of judging aright.

Capt. Harold Balfour, Under-Secretary for Air, at Ramsgate: Let us remember that the country has not yet accepted a view that the spur of individual effort and reward is an anti-social impulse to be extinguished in our industrial life so as to give place to the formation of a nation of State employees trained to look only to the State for their security and livelihood.

The issue is not *laissez faire* and reaction against progress. It is between social progress and reconstruction, planned and executed with private enterprise playing the main part, against the creed that every form of State ownership and operation is in itself a good thing and, from the moral and practical viewpoint, must be better than any form of private ownership.

I want to see a policy which will restore as fast as possible our liberties and free us as soon as possible from every vestige of unwanted, avoidable, bureaucratic control of our lives.

Speaking, of course, under the fashionable political umbrella of "personal capacity," I look forward to when, by common consent of the common man, we can abolish from our daily lives the use of four words. The first is "queueing"; the second "priority"; the third "requisition"; and the fourth "ration."

Mr. Ralph Assheton, Financial Secretary to the Treasury, at Nottingham: After the war, given a generation of peace and wise government, we can achieve a level of prosperity such as we had not known before. The inventive genius of mankind is capable of providing us with immense material advantages.

Mr. Noel Baker, Parliamentary Secretary, Ministry of War Transport, at Cardiff: I do not believe that the rivalry of merchant navies will be a cause of discord between the seafaring nations in the days ahead. Merchant shipping helps to bind the nations by links of common economic interest which they cannot break.

Mr. R. V. Grimston, M.P., Assistant Postmaster-General, at Trowbridge: We shall have to submit to many war-time controls in the immediate post-war period. But let us see to it that in the process of defeating Hitler we do not swallow his doctrine that individual liberty is of little account if it stands in the way of successful State planning.

Mr. William Mabane, Parliamentary Secretary, Ministry of Food, at Billingham-on-Tees: It would be a national disaster if the nutritional work with which the Ministry has been associated were allowed to lapse.

Two hundred years ago the people of this country were much better fed than they are to-day. Go to Australia or New Zealand. There you find a race of relative giants. These are the descendants of the same people who when they lived in these islands one or two generations ago were shorter, smaller, and not so healthy. The main cause of that effect has been a healthy and adequate diet.

Mr. Kenneth Lindsay, M.P., at Eastbourne: Experience in the Services has shown that startling results can be achieved in six months through novel methods of physical, technical, and mental up-grading. With the co-operation of employers and trade unions we could apply comparable methods to the 2,000,000 young workers who are still our most neglected asset.

tion of Russian territory.

There is also immense physical endurance — ability to wade through mud 20 to 25 miles a day. The Germans, used to easy motorised transport, have largely lost the infantryman's stamina.

The difficulties of supplies catching up with rapidly advancing armies are, however, considerable, and therefore, before launching the offensive, the Russians concentrate behind their lines large fleets of hundreds of transport planes.

The German Army is beginning

from the Rhineland inadvertently admitted, there is a firm belief that, "if it just failed to come off this time, it will succeed next time, after some very hard years through which the German people will have to live."

But in the Ukraine the dominating feeling among the Germans is, perhaps, acute disappointment over the loss of the Ukraine, particularly the Western Ukraine, which the Germans regarded as an essential part of their national economy and the only real solution to their domestic food problems.

STUTTGART RAID HAVOC

It is now known that after Bomber Command's attacks on Stuttgart on the nights of February 20 and March 1, there were particularly heavy concentrations of damage in the Feuerbach and Bad Cannstadt districts, the two most important industrial areas in the city, states the Air Ministry.

Nine key factories were very seriously damaged and three less severely. Thirty-two factories were hit and many of them very severely damaged.

In addition four key railway targets were hit, the large railway workshops in the Bad Cannstadt being almost entirely destroyed.

The most important industrial plant in Stuttgart is the Robert Bosch works which produces ignition equipment for all types of aeroplane engines and electric components for bombs.

Several large workshops and a foundry were completely or partly destroyed. The Bosch offices and the research station in the centre of Stuttgart were badly damaged.

The main factory of the huge Daimler Benz firm was also very seriously damaged. Here engines and components for planes and tanks were made.

Headquarters of the United States Strategic Air Forces in Europe announced yesterday that photographs made during Friday's attacks on the German fighter airfield at St. Dizier, France, and on industrial objectives in Frankfurt, showed heavy concentrations of bomb bursts in the target areas.

At St. Dizier, two of three groups of buildings were well hit, and structures in the administrative section and numerous small hangars in the dispersal area left burning. The dispersal area was blanketed with bombs.

AMERICA WORRIED BY ALLIED POLICIES

"Collaboration" Doubts

From FRANK MacDERMOT,
Special Correspondent of "The Sunday Times"

NEW YORK, Saturday.

In his Press Conference Mr. Roosevelt was scornful of the now almost conventional complaint that the United States has no foreign policy. Describing again the kind of world the Allies are fighting to create, and repeating the promise that Axis atrocities will be punished, he indicated that his statement was itself a statement of foreign policy.

Two days earlier Mr. Hull had produced something much more detailed. His seventeen points contained no novelty but were a useful recapitulation of matters dealt with in his speeches. There is a great deal of meat in them — far more than his critics are willing to allow. I do not see how anyone can read them attentively without admitting that they embody a concrete foreign policy.

THE ATLANTIC CHARTER

Inevitably the principles he formulates are sometimes likely to overlap and raise a question as to which of two or more shall have priority, and cannot always be applied without the controversies and complications natural to the controversial and complex field of international relationships. This is perhaps even more true of the provisions of the Atlantic Charter. Mr. Hull's specific reference to the Charter may here be quoted:

> The pledge of the Atlantic Charter is of a system which will give every nation, large or small, a greater assurance of stable peace, greater opportunity for the realisation of its aspirations to freedom and greater facilities for material advancement. But that pledge implies an obligation for each nation to demonstrate its capacity for stable and progressive government, to fulfil scrupulously its established duties to other nations, to settle its international differences and disputes by none but peaceful methods, and to make its full contribution to the maintenance of enduring peace.

After pausing for a moment to wonder just what is the import of the word "progressive," and whether this proviso is compatible with the right of each nation to choose its own form of government and with the "good neighbour" policy in South America, one notes thankfully that Mr. Hull adheres to his view that small nations shall participate fully in the preservation of peace and that their position shall not be one of irresponsibility or fastidious aloofness. One of the oddities of the League of Nations was that its headquarters were in a country that proclaimed in advance its intention to remain neutral in any war to enforce the League's own principles. This sort of thing is not unimportant, for it confuses the whole moral situation.

IDEALS AND PRACTICE

Without reference to the rights and wrongs of neutrality in the past and present (one neutral country has recently been described in a speech here as "the last stronghold of principle in international affairs"!) it is arguable that the

any of the solidity of a post-war peace system.

Another of Mr. Hull's points that attracts one's attention is his expectation that alliances, spheres of influence and other "special arrangements" will become obsolete. How soon will this happen, and can we afford meanwhile to allow alliances to be made without reference to an international organisation? When it was asked in 1919 in Versailles who should decide whether a treaty was consistent with League obligations, President Wilson replied "Public opinion"—upon which his questioner remarked, "Am I in a peace conference or a madhouse?"

Many of these old perplexities will presumably recur, and there will be the same temptation to onlookers, especially Americans, to be impatient about them and blame statesmen and diplomats for bad faith or for straying from the ideals of the plain people. Meanwhile there are Mr. Churchill's broadcast and a later address by Mr. Hull to look forward to.

What really causes worry is not that the State Department and the President have no foreign policy but that Russia, Britain, and the United States seem so much less close together than is desirable. How much stock does Marshal Stalin take in either the Atlantic Charter or Mr. Hull's 17 points? The former was made the basis of the United Nations' joint and several declaration in January, 1942, and this declaration included a pledge by each nation to collaborate with the other signatories. Does the declaration hold?

POLAND

Poland, to be frank, is on the conscience of nearly everybody except professional Liberals. Mr. Willkie and others may talk about the impropriety of having "dealt with" Vichy or with Darlan or with Badoglio, but the number of people who worry themselves on this score is trivial compared with those who feel that the United States and Britain are doing less than they might for the Poles. This feeling may be based on ignorance to some extent, but not altogether. The members of the House of Representatives who saw Mr. Hull yesterday are said to have received some reassurance, and the public hopes for further enlightenment from him or Mr. Churchill.

Above all, it hopes for early evidence of comradely relations between the Western democracies and Russia, and it desires to feel sure that Russia accepts in practice that principle of collaboration and consultation which is the proper answer to those critics of the State Department who demand from it formulation of hard and fast American policies on a series of political and economic questions

NAZI DISTRUST OF HUNGARY

Obtaining Help By Coercion

From Our Diplomatic Correspondent

One indisputable fact emerging from the German occupation of Hungary is that there has been another serious crack in the Axis. It is obvious that if the Germans have lost faith in the Hungarian will to resist, the Hungarians have become equally convinced that Germany is faced with nothing but defeat.

The Hungarians have probably more intimate knowledge than any other people of the true state of affairs inside Germany and this circumstance gives their attitude unusual importance. Undoubtedly there is a large collaborationist element in the country; but the majority of the people are anything but Naziphile. They were drawn into the war by the prospect of cheap booty and were gratified with rich pickings in Slovakia and Transylvania.

Germany's intention is certainly to get as much help as she can by extreme measures of coercion. Whether the Honved army will be of much use as a fighting unit, even if stiffened and brigaded with German troops, is a matter of some doubt. A statement issued in Berlin that German troops would "relieve" Hungarian on the Carpathians suggests that they may not be trusted on the frontier now menaced by the near approach of the Russians. Naturally the control of Hungarian railways is also of primary importance for the German High Command.

BULGARIAN SITUATION

There is no confirmation that Marshal Antonescu has been summoned to Hitler's headquarters to secure his willing or unwilling consent to a similar occupation of Rumania. The position there is rather different, because large German forces are already falling back on Rumanian soil in Bessarabia and Transdniestria.

Of greater interest, however, is the situation in Bulgaria. Germany's attitude towards her will be a measure of her strength and ability to deal with the Balkans. Any attempt to coerce Bulgaria might easily rouse violent opposition.

The Germans have few troops in Bulgaria but are strongly established in parts of Old Serbia, Greece, the Dodecanese and Crete. Their secret service and police in Bulgaria are well organised but all efforts to induce Bulgaria to break with Russia have so far failed.

The next few days will be critical. The Germans may feel that as Bulgaria is somewhat remote from central Europe discretion is the better part of valour. There are no bridges over the broad waters of the Danube which form a natural frontier between Bulgaria and Rumania.

MEMORIAL TO LINCOLN

From A Special Correspondent

Next month, representatives of the National Trust will, I understand, meet architects on the site of the Richard Lincoln's house at Swanton Morley, Norfolk (which Col. John Leslie, of Brancaster,

AMERICANS TRAINING CHINESE ARMIES

New Technique In Military Collaboration

From IAIN LANG,
Special Correspondent of "The Sunday Times"

CHUNGKING, Saturday.

Vital issues affecting the problems of extending military aid to China are raised by a project now being carried out by an American Army organisation in many centres of South-Western China.

The organisation, known as the "Yoke Force" (yoke being signalese for the 25th letter of the alphabet), is now 12 months old and during the first year it has grown from four staff officers to a body of military experts numbered in thousands. I have just returned from a tour of Yoke Force installations in the south-west filled with admiration for the energy and ingenuity which are being put into the task.

Those qualities are incarnated in the chief of the Yoke Force staff, Brig.-Gen. Frank Dorn, a 43-year-old Californian who combines shrewdness and a sense of humour with diplomacy and determination, without which his difficult job would be an impossible one.

TOGETHER IN THE FIELD

The Yoke Force is probably the largest military mission in the world. Its task is to increase the fighting efficiency of the Chinese Army, to supply certain types of war material and medical supplies and advise the Chinese in the organisation of supply and transport services. In carrying out this mission a new technique of military collaboration has been devised. This technique is summed up in the words of one American officer: "Wherever there's a soldier who doesn't know what his weapon can do and how to make it do it well we show him—no matter where he is."

In other words, Sino-American co-operation is not something that begins and ends at general headquarters. The Americans work alongside the Chinese in the field and give advice on the spot to the man who needs it most. For it is everywhere and always a matter of advice. The Americans do not command. American travelling instructional groups work with Chinese army groups and American liaison teams help trained Chinese to pass on instruction to lower formations, if necessary down to the squad.

MOBILE SCHOOLS

In addition, the Yoke Force operates infantry and artillery training schools in conjunction with the Chinese Army. American field hospitals are in the forward areas, veterinary teams are conducting mobile schools and helping to tend transport animals and American signal units and ordnance teams are working with the Chinese forward troops.

Technical details of the work I have seen in the past week would make a very long story, but it is possible to convey the spirit of the Yoke Force by one or two small but significant incidents. At an artillery school, for instance, there was a moment when the commanding officer, spruce, polo-playing Brig.-Gen. Waters, picked up a grooming brush to demonstrate to a wide-eyed Chinese private the mos

MEN FOR TITO ARMY TRAINED IN ITALY

From HENRY BRANDON,
"Sunday Times" Special Correspondent

SOMEWHERE IN ITALY, Saturday.

Among the many uniforms you see in Italy is that of the Jugoslav partisans. They have established their "overseas" military headquarters here, which has been expanding rapidly during the last few months.

In several camps in Italy thousands of Jugoslav refugees are trained to reinforce Marshal Tito's Liberation Army. Specialists lecture them on the latest weapons, with which their army will soon be provided by the Allies, and the British Council has been responsible for introducing English language classes. In their own hospitals hundreds of wounded evacuated from Jugoslavia are cared for.

British, American, and Russian missions at the Jugoslav headquarters act as a counterpart to the Allied missions attached to Marshal Tito's headquarters in Jugoslavia, forming a link with London, Washington, and Moscow.

I spoke to some of the men who keep the supply line to Jugoslavia open. British and American officers and men are playing an important part in making these operations possible. Their stories, some of the most dramatic of the war, cannot yet be told.

CAPTURED WEAPONS

British authoritative sources here describe the Jugoslav partisan movement as a popular movement, with the support of the majority of the populace. The equipment of Marshal Tito's army remains chiefly captured German or Italian weapons, but our supplies are steadily increasing.

The partisans I saw at the headquarters here show the same pride and self-confidence as do young Russian officers. Modest about their own achievement, they are emphatic on their supply needs. They are most enthusiastic about the valuable assistance they are receiving from the Allied air force.

Proof of how seriously the Germans are now taking the partisans is provided by their issue of a new medal given for fighting in Jugoslavia. They are also treating partisans taken prisoner as war prisoners according to the Geneva

Court Circular

HARICWOOD HOUSE, Saturday.

The Princess Royal, Controller Commandant, attended by Miss Kenyon-Slaney, visited units of the A.T.S. in Anti-Aircraft Command to-day.

COPPINS, IVER, Saturday.

The Duchess of Kent, attended by the Lady Rachel Davidson and Captain Lord Herbert, visited factories in Dumfriesshire this morning.

On the occasion of the 123rd anniversary of Greek Independence Day, a solemn Te Deum will be sung at the Greek Cathedral of St. Sophia, Moscow Road, Bayswater, W., at 12 noon to-day. After the service, at 12.30, the Greek Ambassador will receive the Greek community at the Greek Embassy.

Birthdays.—To-day: The Hon. Harold Denison is 88, Rev. Lord Byron 83, Sir Cecil Walsh 75, Sir Clifford Heathcote-Smith 61, Mr. Julius Harrison 59, Sir Hugh G. Williams 55, Hon. Nigel Orde-Powlett 44, Sir Alexander B. Ramsay 41, Earl of Kinnoull 9.

To-morrow: Prof. Sir William Mitchell will be 83, Sir Leonard West 80, Archbishop of Nicopsis (Most Rev. Joseph Butt) 75, Mr. J. R. Clynes, M.P., 75, Sir Marlay Samson, K.C., 75, Rear-Adm. Henry G. E. Lane 69, Bishop of Plymouth (Rt. Rev. F. Whitfield Daukes) 67, Sir George Colvin 66, Lt.-Col. Hon. Arthur Murray 65, Sir Christopher Magnay 60, Sir Kenelm Lister-Kaye 52, Sir Michael Bruce 50, Sir Archibald Hope 32, Earl of Suffolk 9.

WEDDING

The marriage took place yesterday at Holy Trinity, Brompton, of Baron Rolf Beck, of Redbourne, Hertfordshire, son of Baron and Baroness Beck of Geneva, and Mrs. Elizabeth Leslie Brenchley, widow of Mr. H. S. Brenchley, and only daughter of Capt. Hugh Fletcher, R.N., and Mrs. Fletcher, of Empire House, Thurloe Place, S.W.

The bride was given away by Air Vice-Marshal Sir Tom Webb-Bowen. Her matron of honour was Mrs. Eric Bailey, and the best man was Count Michael Potulicki.

Obituary

Capt. Hon. A. Anson

Capt. the Hon. Alfred Anson, eighth son of the second Earl of Lichfield, died in New York yesterday, aged 68, states Reuter. He is survived by his wife, whom he married in 1912.

SIR HENRY WOOD

MEMORIAL FUND TRIBUTE

Speaking at the "Daily Telegraph" concert at the Albert Hall yesterday in celebration of Sir Henry Wood's 75th birthday, Viscount Camrose said no one had done more than Sir Henry to bring to the music-loving public the works of the great composers. It was to his genius, inspiration and learning, and his ever-prevailing enthusiasm, that tens of thousands of people in this country, and in other countries too, owed many happy and satisfying hours.

A nation-wide appeal was being made for funds with which to establish a permanent memorial to Sir Henry and his work in the form of a new concert hall in London.

neutrality will be as good a test as

implications.

recently presented to the trust, to decide on a suitable memorial to Abraham Lincoln, who was a direct descendant of Richard.

A replica of Richard Lincoln's house, which was demolished in 1892, rebuilt on the original site, has been suggested, but the trust is opposed on principle to such reconstructions. Nevertheless, it is thought possible that a copy of Richard's house may be erected elsewhere in the village. Steps are to be taken to interest the two Lincoln societies of America in the scheme.

It has lately become known that it was from this unpretentious 60-ft. plot of ground, now overgrown with weeds and used as a hen-run, that America got her great President. In 1615 Richard Lincoln, a well-to-do yeoman, made a 4,000-word will disinheriting his eldest son Edward in favour of his fourth wife. Edward, unexpectedly poor, was forced to apprentice his son Samuel to a Norwich weaver, with whom he emigrated to America in 1637. It was from this Samuel that Abraham Lincoln was descended.

CHEAP FARES FOR WAR WORKERS

The Ministry of Labour and National Service announces that transferred war workers will again this year be allowed two cheap travel warrants for visits to their homes. Each warrant will entitle the worker to a return railway ticket at 7s. 6d. where the fare exceeds that amount.

The warrants will be available from April to September inclusive, save for agricultural workers, for whom they are available for the 12 months beginning April 1. They will not be issued for travel at Easter (April 6 to 11 inclusive) or at the Whitsun and August Bank Holidays.

Application forms are obtainable from local offices of the Ministry of Labour.

FIVE NEW D.F.C.s

Five new D.F.C.s have been awarded, it was announced last night.

The recipients are: Wing-Cmdr. P. E. Meagher, R.A.F., No. 11 Squadron, elder son of Sgn. Rear-Adml. E. T. Meagher, of Wimbledon; Actg. Flt.-Lt. J. H. Deall, No. 266 sqdn.; Fl.-Offr. N. J. Lucas; Fl.-Offr. D. F. Ruchwaldy, D.F.M., and Fl.-Offr. J. N. Yates, No. 607 sqdn.

effective way to remove dust from the coat of a very dusty pack mule. Or at an infantry school when the commander, Brig.-Gen. Wessell, scrambled over miles of rough hillside to follow every detail of a tactical exercise by a party of Chinese officers.

But perhaps the Yoke Force spirit was most fully embodied in a tough and taciturn American sergeant in charge of a blacksmith's shop at an artillery school. The shop was a 60 ft. long shed with a double row of forges at which Chinese soldier students were busy. I noticed that anvils, bellows, and tools were all of Chinese pattern and asked the sergeant what equipment he had to start with. "One shoeing knife," was the reply.

UNFAVOURABLE CONDITIONS

But with all due tribute to the resourcefulness and enthusiasm of both the American instructors and the Chinese student, there are certain inescapable misgivings concerning policy which the Yoke Force is carrying out. The fine work now being done in the Hukawng Valley in Burma by Chinese troops of the South-East Asia Command, trained and equipped and fed by the Americans, leaves no doubt that the Chinese make excellent fighting men under favourable conditions. There is equally no doubt that conditions in China are far from favourable. Many of the troops which reach the Yoke Force centres have had to march hundreds of miles on inadequate rations and in unserviceable uniforms and are fitter for prolonged medical treatment than for technical instruction when they reach their destination.

SHOULDER FLASH FOR INVASION

Supreme H.Q., Allied Expeditionary Force, yesterday issued its new shoulder flash, which will be worn by all officers and enlisted personnel attached to Gen. Eisenhower's H.Q.

The shield-shaped cloth patch with a black background, representing the darkness of Nazi oppression, bears the crusader's sword of liberation with the red flames of avenging justice leaping from its hilt. Above the sword is a rainbow, emblematic of hope, containing all the colours of which Allied flags are composed.

The heraldic field of blue above the rainbow is emblematic of peace and tranquillity for the enslaved people of Europe—the objective of the United Nations.

WOMEN'S AID IN TRANSFUSION

By JULIA HERRICK

HUNDREDS of women in London—wives, mothers, and sweethearts of fighting men—are helping the preparations for a "second front" by giving blood—their own blood—to the Red Cross. Temporary stations have been set up in various districts, and hour after hour, every day, doctors, nurses, and Red Cross voluntary workers are receiving donors.

A huge blood store is being built up. Many donors give from two-thirds of a pint every three months. But hundreds more contributors are needed. So much so that passers-by in London streets are being canvassed to register and to give their help. A Red Cross worker told me last week, while she was preparing me for a transfusion, that the death rate from wounds is 12 times less in this war than it was in the last, because human blood in the form of plasm is available in such large quantities.

To give a pint of blood means the sacrifice of only half an hour of one's time. There is no pain, no discomfort. Indeed, there are people who actually benefit from the gift. I found that there were no after-effects of any kind. If one's leisure is limited, it is possible to make an appointment with the Red Cross workers and to go to the centre nearest to one's home, or one's work, at the hour best suited to oneself.

The procedure is simple. The left sleeve of frock or jumper is rolled up above the elbow, the surface in the bend of the elbow is sponged with antiseptic, and a woman doctor is called to start the blood running. There is a slight prick in a vein, the Red Cross nurse adjusts tubes and containers, and talks quietly to the donor for the 10 minutes or so which it takes for the pint, or two-thirds of a pint to be run off.

Then comes 10 minutes' complete rest in a warm corner on a couch, a cup of tea, an inspection of the "wound" to see that the light dressing which is put on is secure, and the donor is free to leave the station.

This human blood has been used to a tremendous extent in connection with air-raid casualties, and the hospitals consider that large numbers of men, women and children who might otherwise have died as a result of their injuries in a raid have been saved by blood transfusion.

cultivation.

THE ATLANTIC CHARTER

By Our Political Correspondent

Continued from Front Page, col. 8

They feel that while operations dwarfing all that has gone before are imminent, it is not the time for public disclosure and discussion of such demobilisation plans as may exist.

Nevertheless, some members of the Conservative Services Committee may seek a debate on demobilisation after Easter. But by then events may make it a thoroughly inappropriate topic.

Electoral Register

It is hoped that after July by-elections will be decided on an up-to-date register. Mr. Herbert Morrison, Home Secretary, anticipates that the preliminary work of transferring material from national registration officers to electoral registration officers will be completed in all areas by the end of next month. It will then take two months or so to deal with this material for electoral registration.

Women and Equal Pay

I am told that the deputation of women M.P.s and others, representing the Woman Power Committee, who saw Sir John Anderson, Chancellor of the Exchequer, last week to urge equal pay for men and women civil servants had a "helpful" reception and discussion.

When the long campaign for equal compensation for men and women under the civilian war injuries compensation scheme was won last year it was foreseen that the logical next step was an attempt to secure equal pay for equal work. That attempt is now being made.

Members of the deputation point out that equal pay has been conceded in certain Government-controlled fields of work, and has received limited recognition in the trade union movement. It may be assumed that the Chancellor did not commit himself—he would be an indiscreet Chancellor if he did—but the campaigners are hopeful.

Furniture Prices

A new system of control of second-hand furniture is being devised. The present system under which a dealer may add not more than 50 per cent. to what he paid for an article, provided his price does not exceed the price of the article when new, has never worked satisfactorily.

Evasion is not difficult, and the Board of Trade is satisfied that a profitable ramp is in operation, and one which must be checked, especially as utility furniture at controlled prices is available to a small class of people only, and in strictly limited quantities.

WAR-TIME RECIPE

Prune and Apple Tart.—Stew 6 oz. soaked prunes with very little sugar. Stew also 2 oz. soaked dried apple rings, sweetening them with syrup and flavouring with two or three cloves and a few drops lemon substitute (or grated lemon rind when available). Rub the prunes and juice through a sieve and beat the apples to a pulp with a fork after removing the cloves.

Line a deep pie plate with short pastry, prick it well, and put in the prunes. Cover with the pulped apple and then with ½ pint custard made with custard powder or dried egg. Bake in a moderate oven until the pastry is done and the top lightly browned. (For four to six persons.)

Line a deep pie plate with short pastry, prick it well, and put in the prunes. Cover with the pulped apple and then with ½ pint custard made with custard powder or dried egg. Bake in a moderate oven until the pastry is done and the top lightly browned. (For four to six persons.)

Lord Camrose announced that the gross receipts of the concert, all of which would go to the fund, amounted to approximately £8,000.

The Queen, Princess Elizabeth and Princess Margaret attended the concert. In the interval Sir Henry, who conducted four items on the programme himself, was received by the Queen, and stayed for a long time talking to her and to the Princesses.

R. H. writes: A gigantic orchestra, consisting of the London Symphony Orchestra, the B.B.C. Symphony Orchestra, and the London Philharmonic Orchestra, was conducted in turn by Sir Henry Wood, Sir Adrian Boult, and Basil Cameron.

In the playing of an orchestra of that size one does not look for finessee or delicacy, but a mighty wash of sound. This, indeed, was produced to an impressive degree in Wagner's overture "The Flying Dutchman" and Strauss's symphonic poem "Don Juan." Two of the items—Bach's Brandenburg Concerto No. 3 and Elgar's Introduction and Allegro—were for strings alone. In Beethoven's Concerto No. 3 the solo part was superbly played by Solomon.

IDEAL HOUSES READY SOON

The eight experimental houses under construction by the Ministry of Health at the Government building research station at Watford are almost completed.

"Not one is pre-fabricated," an official of the station stated. "Bricks of varying compositions are the main components, and wood, chiefly plywood which has been treated to prevent warping, will play an important part.

"Our whole aim has been to discover the right building materials to provide houses that will embody warmth, sound-proof properties, and everything conducive to good health."

U.S. CONGRESS VISIT

The United States Congress delegation which is to visit Great Britain on the invitation of the British Parliament is expected to leave Washington soon, says Reuter.

SEAMEN'S CLUBS

The Merchant Navy Club, Cardiff, was opened jointly yesterday by Mr. Bevin, Minister of Labour, and Mr. Winant, United States Ambassador. Mr. Winant said it was the third to be established in Britain as a gift from American Labour. He knew of no comparable gesture of friendship between working men and women of one country towards comrades in a common enterprise. The other clubs are in London and Glasgow.

Mr. Bevin said the clubs were in what the Americans would call the "up-town" districts. They allowed the seamen to break away from the shipside and dock area to take part in the general life of the city while they were ashore.

WILLS & BEQUESTS

Miss B. A. CHRISTOPHER, St. John Baptist Convent, Clewer, near Windsor, who left £6,903, bequeathed £2,800 to St. Basil's Home for Aged Women, Oxford.

Albery, Mrs. R. E., Dorking ..	£21,318

BIRTH

FANTL.—On March 25, 1944, at Hammersmith Hospital, Ducane Street, London, to [illegible] (née Wade), wife of Sqdn.-Ldr. A. J. Fantl, M.B.E., R.A.F.—a boy (Paul John Wade).

EDUCATION IN THE JUNGLE

R.A.F. KEEPS UP ITS STUDIES

From A Special Correspondent

Seven hundred airmen serving in the forward areas of East Bengal and Burma have resumed vocational and other studies that were interrupted by the war.

They are doing it through correspondence courses with the International Correspondence Schools and the British Institute of Engineering Technology. The majority of larger R.A.F. establishments have technical libraries, information rooms (called "gen dens" in the typical R.A.F. way), and quiet rooms for study.

"I find that the farther forward one goes the greater is the desire to continue with those studies," said the flight lieutenant in charge of R.A.F. education in this forward area. "The members of a hard-worked squadron or unit seem to desire to fill in their leisure hours to the maximum advantage. I have come to regard an education officer's job as that of a 'traveller in culture,' and I find that my efforts have borne greater fruit in this part of the country than in any other I have visited."

THE PIG BREEDER

Most large units have their own assistant educational instructor, who is chosen, irrespective of rank, from among volunteers with suitable academic qualifications. The technical libraries are all mobile so that they can visit smaller camps in the district. Not only are books on such R.A.F. subjects as navigation, mathematics, and similar topics included, but also works on civilian vocations are provided. Not so long ago an airman asked for a book on pig-breeding, and it was provided.

A "PROM" NIGHT

In the information rooms there is, wherever possible, a display of current literature, maps showing the progress of the war, pamphlets on India and on the war in general, and other things of a similar nature. Good music is very popular. A library of 200 records has been built up at the education headquarters of this area. It is no uncommon thing to find a jungle canteen announcing a Mozart evening or a chamber music concert for one evening.

Other features of this jungle education are play-reading circles, "quiz" night, brains trust evenings, and the cultivation of interest in hobbies.

SMUTS ASKS FOR MORE MEN

CAPETOWN, Saturday.

Gen. Smuts, speaking here today, said: "I ask South Africa to-day for more men. We are on the eve of the final phase of the most fateful military operations ever undertaken in the history of warfare. There can be no faltering now.

"South Africa has pledged her word to finish the fight," said Gen. Smuts. "It is for us here to ensure that in so far as reinforcements are necessary we shall maintain our strength and not look to the United

HARASSING ENEMY WITH AIRBORNE TROOPS

Lessons Of Burma Venture

By E. COLSTON SHEPHERD
Air Correspondent of "The Sunday Times"

Since Allied troops were delivered by air to points of vantage near Algiers and Oran in 1942, there has been a just expectation that airborne troops would continue to play a large part in future offensive operations. The early stages of the campaign in Sicily were subsequently shared by glider troops and paratroops. Now the Japanese in Northern Burma are being harassed by British and Indian troops similarly landed in their rear.

Air power has not been used for a similar purpose in the semi-static warfare in Italy, although a degree of air superiority equal to that which the Allies enjoyed over Sicily is also established over the greater part of the Italian mainland. This type of operation can be seen therefore to need something more than plain air superiority.

It must be able to count on enough freedom from interference to allow big transport aircraft as well as gliders to land the heavier equipment required to resist the more formidable types of opposition such as might be offered by tanks and artillery.

PROTECTING THE BASE

It can be protected from air attack by fighters. It must equally be protected against attack by enemy ground forces. The prospect of setting up hedgehog posts behind the enemy's frontal defences is determined as much by his inability to attack them quickly as by success in preventing him from moving into the area a force capable of wiping out the new base before it is properly equipped. That alternative is likely to be an essential consideration if the same method of disorganisation should be attempted in Europe where communications are good and the distances defending troops would have to travel are likely to be fairly short.

Reports from Burma hint at the more ambitious plan of using air strength to accomplish infiltration. If it were to be employed in European invasions it would have to count on immobilising the forces which might oppose it. And that could most probably be done by isolating from the air the district in which the flying column's base was located. It would mean almost incessant air attack by day and by night around the edge of the district.

FORMIDABLE MOSQUITO

Recent evidence of almost continuous air activity from British bases during the full 24 hours of a day is a useful index of the volume of bombing and "ground strafing" which might be devoted to such a cause in a circumscribed area. The daylight work could also be given weight as well as variety. Certain types of target need nothing heavier than a stream of 20 m.m. shells from the cannon of the fighters. That is particularly true of trains and lorries. Some are well smashed by the 500-lb. and 1,000-lb. bombs of the Mitchells and Marauders. The Typhoons make good dive-bombing with 500-

EIGHT DOWN IN FIRE RAID ON LONDON

At least 8 raiders—out of perhaps 100—were destroyed in Friday night's fire raid on Greater London. Two crashed in the London area, one demolishing a house, killing a soldier's wife and her two children.

Thousands of incendiaries and some high explosive bombs fell in open country near a residential area in the Home Counties. Two timber yards were set on fire, but the flames were soon under control.

"It was just like a firework display," said a councillor. "But what struck me most was the terrific waste of effort by the Luftwaffe. They dropped thousands of fire bombs which did not hit a single house."

A famous London church was damaged by fire, but a marriage arranged for yesterday took place there. Other churches were burnt out. One spire crashed into the nave as firemen trained their hoses on to the blazing roof.

HOUSES DAMAGED

Search continued yesterday for people feared trapped in the debris of buildings in a main road which received a direct hit. An H.E. made a large crater in the roadway of a residential area. Houses were damaged on both sides of the road, and there were a number of casualties.

One raider fell to a Mosquito night fighter. It was the fourth destroyed in five months by Fl.-Offr. E. R. Hedgecoe, of Brookman's Park, Herts., and his navigator, Fl.-Offr. Bamford, D.F.C., of Sevenoaks.

A few minutes before the Mosquito landed it was flying over the Channel afire from end to end, with the fliers preparing to bale out.

Flt.-Lt. B. A. Burbridge, of Knebworth, and his navigator, Flt.-Lt. Skelton, of the same squadron, destroyed a Ju88 and a Dornier 217—bringing their bag to three in 30 days.

JUGOSLAVIA'S STAND

Three years ago to-morrow the Jugoslavs defied Germany and cast in their lot with Britain. In an article in to-morrow's "Daily Sketch" Mr. A. L. Kennedy, an authority on Balkan affairs, suggests that their decision may have changed the course of history. He claims that though Jugoslavia was swiftly overrun, the country's resistance deranged Hitler's 1941

ALLIANCE OF SCIENCE AND STRATEGY

Must Be Retained In Peace

BY CAPTAIN RUSSELL GRENFELL, R.N.
"Sunday Times" Naval Correspondent

In this war, for the first time in our history, science has been fully associated with the conduct of the war. The scientist may previously have made a fortuitous intervention in warfare, but never before has his participation been officially sought and comprehensively organised to the same extent. There are now scientists of the highest attainments attached to the Admiralty, War Office, and Air Ministry, working in the closest co-operation with the Service staffs.

The value of this alliance between science and strategy is fully acknowledged by the Services. Warfare in this mechanical age has become so complicated and technical progress so rapid that the scientist is now in a position to give valuable assistance to the Service officer not only in the sphere of material equipment but also in its best application to the task of beating the enemy. The actual operations of war are often capable of scientific analysis, leading to conclusions which can be embodied in the plans for operations to come.

PERMANENT PARTNERSHIP

The advantages that have accrued from the present close collaboration between the scientist and the warrior make it essential in the national interest that the collaboration should continue in peace-time. If so, it is desirable to have the necessary organisation thought out and prepared in plenty of time while the issue is a live one. Otherwise there will be a danger of the two sides drifting apart. What form should a permanent partnership assume?

This is a question that affects both partners. For the scientist to play his part efficiently, he and the strategist must be adequately acquainted with each other's points of view, the scientist knowing what the strategist is likely to want and the latter being sufficiently aware of what it is feasible to demand. These reciprocal requirements postulate a fair working knowledge of Service conditions on the scientist's part, and a reasonable understanding of scientific method by the warrior, to enable him at least to speak enough of the scientist's language to be intelligible. This scientific grounding of the warrior is not only a matter of the instructional time-table but also of the general intellectual standard of entrants, and demands Service conditions attractive enough to ensure candidates being of a suitably high mental level.

OBTAINING RIGHT MEN

On the scientific side, defence problems are probably so specialised as to require a nucleus of whole-time scientists who would acquire a particular acquaintance with the practical conditions and

CONGO'S PART IN WAR

GOVERNOR ON ITS ACHIEVEMENT

From A Special Correspondent

A distinguished visitor to London is M. Pierre Ryckmans, Governor - General of the Belgian Congo for the past 10 years. He has come on a brief visit for consultations with his Government, and to see something of the organisation of Britain for war.

M. Ryckmans, who is greatly impressed with what he has seen here, told me of the difficulties that confronted the Belgian Congo and its Administration when Belgium was subjugated, the remarkable recovery it has made, and the valuable contribution it is making to the war economy of the United Nations.

"We found ourselves completely cut off from home," said M. Ryckmans. "Normal supplies and reliefs disappeared. The Belgian Congo covers an area of 900,000 square miles, 10 times the area of Britain, and has a population of 15,000,000, of which 40,000 only are whites. We had to improvise a new economy for the country in face of great difficulties.

VITAL RAW MATERIALS

"But when Malaya and the Dutch East Indies went down to Japan we had to do more than keep the Congo going. We had to increase its productivity because, next to Malaya and the East Indies, it produces most of the vital raw materials which had been obtained from those areas, particularly tin, palm oil, rubber and quinine. The Belgian Congo is also by far the most important producer of industrial diamonds, which are used for high-speed machine tools.

"Without outside help we had to reconstruct the Belgian Congo as best we could, and we had to do it without the annual renewal of young population from home, with a more or less static white population in a country with a climate that demands regular holiday periods out of it. Nevertheless, we have increased all production that is vital to war. In particular, we have increased our rubber production from less than 1,000 tons in 1941 to 8,000 tons in 1943.

NO RATIONING

"We have extended welfare work among the natives, and developed the medical service, despite the shortage of doctors, by training natives as medical assistants; and we have maintained agricultural research. Financially, we are self-supporting. Though we lack foodstuffs, especially adequate milk and butter supplies, we have no rationing as you have here. So we restrict supplies. For example, on three days a week only the lower grades of meat can be bought. Petrol alone is strictly rationed against coupons.

"We are short, too, of what we call inducement goods—cotton fabrics, pots and pans, and even bicycles, without which the natives will not collect the natural wild rubber. They don't understand war savings. In every territory the local chief is given a target for production, and he and his people are very willing to co-

FOUNDER'S DAY AT HARROW

Football & Rifle Matches

From A Special Correspondent

Founder's Day was observed at Harrow School yesterday with football and rifle shooting matches between the School and Old Harrovians in the afternoon, and a commemoration service to the founder, John Lyon, and benefactors in chapel in the evening.

For the chief match at the Harrow football game on the old Sixth Form ground Sir Stanley Jackson, chairman of the Governors—with whom were Mr. G. C. Rivington, deputy chairman, and Mr. R. W. Moore, the headmaster—kicked off for the Old Harrovians. The school, who won the match by five bases to one, had much the better of the first half, and led 4—0 at half-time, bases being scored by A. McCorquodale, J. A. Glynne Percy, G. M. D. Thomas and J. C. R. Weeks. Play was more even after the interval, and D. F. Sweeting scored for the Old Harrovians, and G. A. J. Hadow for the school. Teams were:

SCHOOL: A. R. McLean, A. McCorquodale, J. A. Glynne Percy, T. G. H. Jackson, G. M. D. Thomas, W. H. J. Summerskill, P. R. J. Browne, F. R. Lewis, J. C. R. Weeks, J. P. Ivens, and G. A. J. Hadow (captain).

OLD HARROVIANS: L. J. Verney, D. C. H. McLean (capt.), G. A. Stogdon, F. R. Anson, C. Bourne, E. C. A. Bell, J. R. Bousser, D. F. Sweeting, P. R. Ingram, I. J. C. Friend, and C. Lewis-Barclay.

UMPIRES: Mr. O. G. Bowlby and the Rev. H. J.-L. Gorse.

The second eleven match resulted in a draw 4—4.

At the commemoration service in the evening the preacher was the Rev. I. H. White-Thomson, chaplain to the Archbishop of Canterbury.

The St. Helier English literature prizes have been awarded to C. G. D. Onslow and M. Essavan; the Augustus Fleet prize to W. D. Wilson; the Cooke prize to R. J. Gluckstein; and the Prior divinity prize to S. D. P. Clough.

The Headmaster's House won both the senior and the junior gymnasium competitions; and S. E. Williamson has won the challenge rackets cup.

The Universities

Oxford

From Our Own Correspondent

Dr. F. M. Brewer and Mr. R. H. Bowdler, nominated by the Senior Proctor, and Mr. R. C. Johnston and Dr. R. A. Hull, nominated by the Junior Proctor, have been admitted to office as pro-proctors by the Vice-Chancellor.

Mr. E. L. Woodward, Fellow of All Souls, has been elected Montague Burton Professor of International Relations as from October 1. The electors to the Gladstone Professorship of Government and Public Administration and to the Chichele Professorship of Social and Political Theory propose shortly to make appointments to these two chairs.

The Rev. F. M. Allen, Queen's, and the Rev. J. S. Lawton, Keble, have been granted leave by the Board of the Faculty of Theology to proceed to the degree of Bachelor of Divinity.

The inspecting officer at the Passing-out Parade of the University Air Squadron was Air-Marshal Sir E. L. Gossage.

The Schools

ETON.—The school will break up

Gardening in War-Time

By A. T. JOHNSON

Whether a rock garden can be included among the more economic phases of gardening depends very largely upon the style adopted. Few of us now have the leisure to spend on coddling the more difficult alpines, but, on the other hand, there are any number of plants which are well able to carry on with a minimum of care, and these war-time survivors, now proving their ability to endure even neglect with a courage that is significant, have an obvious claim upon us.

A glance at almost any rock garden to-day will at once reveal that dwarf shrubs, such as brooms and heaths, miniature rhododendrons, potentillas, the really slow-growing conifers, the creeping Dryas octopetala, those tiny evergreen berberises, and the shrubby milkworts, to name but a few, are entirely reliable and permanent, able to fend for themselves without any aid from us. Then there are the bulbs, all those delightful little things—crocuses, grape-hyacinths, scillas, erythroniums, and small daffodils—which can be left to their own devices indefinitely without a thought for their welfare. In anemones, again, are many lovely little things which demand no care from the early A. blanda and hepatica to apennina and those charming cousins of our own wind-flower which will prevail until summer is nigh.

Permanence and value of the highest must also be ascribed to plants like the mossy phloxes, the members of the Cheddar pink group, golden alyssum in all its varieties, the choicest rock candytufts, those midget michaelmas daisies, so cheerful in autumn, the lesser hardy geraniums and veronicas.

Nature Calendar

By W. KAY ROBINSON

To-day, or as soon after as the wind blows softly from the south, one may expect to hear the chiff-chaff or else to see the wheatear.

These two, in habits and habitat so unlike, are fellow-travellers from the south; the first to arrive, as a rule, of all the host of summer birds. They are easy to recognise: the chiff-chaff by its song, a "tip tap, tip tap, tip tap" among trees; the wheatear by the white rump displayed conspicuously as it flits low over the ground, but lost to view when it alights, suddenly, with a flirt of the tail and stands, very upright, showing its pale breast and the black mark across the face, or turns so that one sees only the dark wings and the pale bluish grey of the back.

The wheatear has no use for trees; its favourite haunts in summer are cliff tops, downland, and the heather-clad expanse of moors, nesting among boulders on the fells and in rabbit burrows on the downs. On migration, however, one may meet with wheatears in open country almost anywhere, on ploughed fields, pastures, and even in the London parks.

The chiff-chaff is much smaller, a tiny greenish mite, scarcely distinguishable from the willow-wren except by its darker legs, and the colour of these is not easy to see as it flits from twig to twig in thickets and hedgerows when it first arrives, but later keeping to the taller trees. Fortunately, it sings incessantly, and its song is very distinct; no one could possibly

Nations to fill the gaps in our ranks from other sources."—Reuter.

"the second great turning-point in the war."

pounders.

Still better now is the contribution which the Mosquito can make. Its speed and its 4,000-lb. bomb make it the most formidable bomber available to the Allies for regular daylight operations. There is no other bomber which can combine a speed of more than 400 m.p.h. with a compartment capable of taking the 4,000-pounder.

The adventure in Burma thus gives rise to a whole series of speculations. Most of them depend for their validity on a marked inequality in air strength between the two sides. That condition of inequality may now be presumed to exist.

FORD'S 3,000 LIBERATORS

The Ford Motor Company stated yesterday that the Willow Run bomber plant has so far built 3,000 four-engined Liberators, says a Reuter Detroit message. For the past eight months the factory has been running ahead of schedule. The first plane was turned out in May, 1942.

... tion is how to obtain the right men. There are several possible deterrents to the best scientific minds regarding defence work in peacetime with favour.

One is financial, the usual scale of remuneration being less than the rewards available in industry. For the scientist, this question, though not negligible, is unlikely to prove the main discouragement.

More important are the form and conditions of service. The necessarily circumscribed atmosphere of a Civil Service, bound by regulation, caution and anonymity, is basically inimical to the scientific outlook, the essence of which is a free, independent, and fearless pursuit of the truth.

The best solution seems to lie in permanent naval, army, and air force scientific services, with frequent "secondings" to the universities and industry.

operate, provided the inducement goods are forthcoming.

"We have a good economic future; but the war must first be won, and I think it is good that Britain should understand what this vast, tropical, and probably often forgotten part of Africa is doing to ensure victory."

SHAKESPEARE FESTIVAL

The Shakespeare Festival at Stratford-upon-Avon will open on April 8 with "The Merchant of Venice." George Hayes will play Shylock and Helen Cherry Portia. Other plays will be produced as follows:

April 10, "Taming of the Shrew." April 11, "Macbeth." April 13, "As You Like It." April 24 (birthday), "Hamlet." May 8, "Midsummer-Night's Dream." May 22, "Richard II." June 5, "Volpone."

BRIDGE

Conducted by Yarborough

The hand below is an exceptionally good example of taking advantage of the most favourable chances in the play of the hand. South was dealer, and the bidding proceeded without interference: South, One Diamond, North One Spade, South Two Clubs, North Four No-trumps (Blackwood asking for Aces and incidentally confirming Clubs), South Five Hearts (showing two Aces), North Six Clubs. West's opening lead was a small Heart.

West	North	East
	♠ A Q x x x ♥ x ♦ x x ♣ A J 10 8 5	
♠ K 10 x x x ♥ J 9 x x x ♦ K x ♣ 4	N / W E / S	♠ 9 x ♥ K Q 10 x ♦ J 10 x x ♣ 9 3 2
	♠ J ♥ A x x ♦ A Q 9 x x ♣ K Q 7 6	

Play proceeded: Trick (1) Ace of Hearts, trick (2) ruff of a Heart, trick (3) small Diamond to Queen and King, trick (4) Queen of Clubs took the Nine. The declarer then counted his sure tricks. He had three Aces in the outside suits, and (if his trumps made separately) eight tricks with trumps, eleven only in all. The outstanding Diamonds were most most likely divided 4 and 2 (now reduced to 3 and 1), and the outstanding trumps 3 and 1 (now reduced to 2 and 0) so that his hopes of establishing a long Diamond for his twelfth trick, after a cross-ruff, were not sufficiently favourable. The odds were 6 to 4 against the outstanding Diamonds being divided 3 and 3 while the finesse in Spades was an even chance. The finesse in Spades was therefore taken at trick (5), to complete the twelve tricks, and succeeded. Note that the declarer had to consider not only the greater frequency of the 4 and 2 division of the missing Diamonds but also that of the 3 and 1 missing Clubs which latter frequency incidentally killed his hope of establishing a long winning Diamond after drawing trumps. Note that as a cross-ruff would have killed the alternative play—the finesse in Spades—the declarer had to decide on his plan as early as trick (5).

ACROSTIC—No 26.

DOUBLE ACROSTIC

(The Fourth of the Series.)

On either side you should present
A very common element.

1. Stockbrokers' dance? Some might think so!
2. He "strives some rock's vast weight to throw."
3. Of a complexion far from pale.
4. A good dog but he has no tail.
5. A kind of eagle known as bald.
6. Rocks formed by water are so called.

PRIZE-WINNERS OF No. 1,003.—Wren P. M. Clarke, Bath; Capt. J. L. Clay, Retford; Cdr. F. S. Scott Fox, King Edward VII Sanatorium, Midhurst; C. C. Grayson, 15, Frederick Road, Aston, Birmingham; P. E. Hall, 861, Sidcup Road, S.E.9; Miss Perret, The Close, Bradfield, Berks.

Six prizes of books will be awarded to the senders of the first six correct solutions of this puzzle opened. Solutions will be accepted up to the first post on Friday, March 31. No envelopes will be opened before then. Solutions should be addressed: Crossword No. 1,004, The Sunday Times, Kemsley House, W.C.1.

tion is how to obtain the right men. There are several possible deterrents to the best scientific minds regarding defence work in peace-time with favour.

One is financial, the usual scale of remuneration being less than the rewards available in industry. For the scientist, this question, though not negligible, is unlikely to prove the main discouragement.

More important are the form and conditions of service. The necessarily circumscribed atmosphere of a Civil Service, bound by regulation, caution and anonymity, is basically inimical to the scientific outlook, the essence of which is a free, independent, and fearless pursuit of the truth.

The best solution seems to lie in permanent naval, army, and air force scientific services, with frequent "secondings" to the universities and industry.

operate, provided the inducement goods are forthcoming.

"We have a good economic future; but the war must first be won, and I think it is good that Britain should understand what this vast, tropical, and probably often forgotten part of Africa is doing to ensure victory."

SHAKESPEARE FESTIVAL

The Shakespeare Festival at Stratford-upon-Avon will open on April 8 with "The Merchant of Venice." George Hayes will play Shylock and Helen Cherry Portia. Other plays will be produced as follows:

April 10, "Taming of the Shrew." April 11, "Macbeth." April 13, "As You Like It." April 24 (birthday), "Hamlet." May 8, "Midsummer-Night's Dream." May 22, "Richard II." June 5, "Volpone."

for the Easter holidays on Thursday, when about 50 boys will leave. The school concert took place in the Memorial Hall last night.

It is hoped the war memorial to Old Etonians will include a permanent memorial in addition to the provision of bursaries. It is suggested that it should take the form of stained glass windows in school chapel.

The summer half will begin on May 3, when members of fifth form, lower boys, and new boys return. Members of the "Sixth" will return the following day. The modified "Fourth of June" celebrations will take place on Saturday, June 3.

RUGBY.—Of the 58 members of the Junior Training Corps who entered for the examination for certificate "A," 45 passed. By beating Uppingham by four goals, the school hockey XI has completed its season and won all its matches. G. M. Wright (School Field) has been appointed captain of tennis. A team has been entered in the Public Schools Rugby seven-a-side contest.

MAGDALEN COLLEGE SCHOOL.—The dramatic society is giving three performances of "Saint Joan" this week-end. The part of Joan is being taken by the head prefect, M. J. Edwards. The hockey season concluded with a defeat by the Nautical College, Pangbourne, which had been beaten on its own ground earlier in the term.

THE LEYS.—The hockey XI have played three matches in the last fortnight, winning against Edinburgh University and M.T.E. Rosyth, and drawing with I.T.C. Perth. School House beat North A by 4 goals to 2 in the final house match. Term ends on Thursday.

DOVER.—The appeal recently made to Old Boys of Dover College to assist financially during its evacuation and to ensure its return to Dover after the war has met with complete success, the amount asked for having already been subscribed.

EPSOM.—The football season ended with Crawfurd winning the senior football cup and Propert the junior. Athletic fixtures include a match with Dulwich, and a triangular match with Tonbridge and Merchant Taylors on Wednesday. Sports day will be next term.

CANFORD.—The school will break up on Tuesday week. Next term will begin on May 5.

WORKSOP.—The school breaks up on Friday; the last fixture of the term is an athletic one against Ampleforth, followed by the sports finals day. Talbot won the senior house hockey cup and also the house music competition.

confuse it with the rippled cadence of the willow-wren, which may also arrive before March ends.

CLASSIC COLTS TRIED

G. RICHARDS UP ON FUTURE MOUNTS

By FAIRWAY

Gordon Richards paid a visit to Newmarket during the past week acquainting himself with horses which will be his future mounts. He had a very busy day on Tuesday, riding six animals from the stable of R. J. Colling, which has second claim on his services as far as Newmarket is concerned, but had an easier time on Wednesday, when he was on the back of four animals from Frank Butters's stable, which has first Newmarket claim on his services, and second only to F. Darling's stable for open races.

It may or may not be significant that he was on two classic "outsiders" which have yet to appear in public—Mr. E. Nolan's Salver, a King Salmon—Versicle colt, of whose merits I told you before the classic races closed, and Mr. E. Cooper Bland's Milestone, a Fairway—Rosetta colt. Both are fully engaged in the classics. The mile gallop of Salver was at a much faster pace than that of Milestone, even though he had only Brush Off as a companion, whereas Milestone had Adam's Bridge (Rutter), Cinquefoil (Connorton), and Fazah to go with him. Rather curiously, another "dark" horse of whom much has been written, Tehran, was also ridden by Connorton, a greatly experienced "lad" who was always up on Umiddad in his work last season.

FORWARD IN CONDITION

Salver appears much more forward in condition than any of Frank Butters's three-year-olds, and, barring mishaps, is almost certain to make his debut at the opening Newmarket meeting, at which he is dually engaged. He could contest the Shelford Stakes of one mile, wherein, however, are entered all the leading Newmarket classic hopes, such as Effervescence and Fair Fame, each penalised 10 lb.; Fair Glint, Honeyway, Model, and Borealis, each penalised 6 lb., and Happy Landing, Merry Mark, and Chart Room, each of whom escapes a penalty owing to not having won a race or races worth £500. Salver's other engagement is in the Column Stakes, another race confined to three-year-olds, in which, however, he could claim a maiden allowance, in contrast to the Shelford Stakes.

So far as the class of the opposition is concerned, the Column Stakes looks the easier race of the two for Salver, but the distance may be deemed too far for him so early in the season. Milestone's only engagement at the opening Newmarket meeting is the Higham Plate, over five furlongs, confined to maiden three-year-olds, in which the stable also has Cinquefoil and Fazah engaged.

A glance at the Newmarket card shows no fewer than five races confined to three-year-olds, and as several hold two or more engagements, it does not appear likely that the acceptances on April 11 will be very large.

NAAS WINNERS.—2.30, Niketal (3-1 co-fav.). 3.0, Garragh (4-5, fav.). 3.30, Gussie Goose (10-1). 4.0, Apios (10-1). 4.30, Prince Jack (8-1). 5.0, Monk's Mistake (6-4 fav.). 5.30, Tulyra (9-4).

ARMY AGAIN IN FINAL

AMATEUR XI BEAT FIRE SERVICE

Army 4, National Fire Service 3

Staging a fine counter-offensive, the British Army beat the N.F.S. on the Brentford ground by four goals to three, and thus again qualified for the Inter-Allied Services Cup Final.

Playing seven professionals against a wholly amateur side, the N.F.S. seemed to have the balance of skill and experience in the first half, goals by Stephens and Owen putting them in a seemingly sound position. The amateurs, however, outstayed their opponents, and during a thrilling second half they wore down the opposition to get the goal that counted.

Apart from the display of stamina, the change in the fortunes of the Army came when they realised that in Sgt. Ashcroft they had the best wing player on the field. After Hopper had started the Army on the come-back, Ashcroft made two goals for Guardsman Bryant — both cleverly taken—and, although the ultra-energetic Stephens had previously put the N.F.S. ahead again, Ashcroft worked the opening for the last goal, and Bryant made his personal contribution three.

There was some fine goal-keeping by Lieut. Watson-Smith for the Army, and at the other end some mighty clearances from Roxburg, of which the Firemen would have made more use if they had adopted less elaborate tactics. The Army backs and centre-half stood up gallantly, but the Firemen's defenders could not stem the rushes of the Army forwards.

CHELSEA CRASH

SPLENDID SECOND HALF PLAY BY WEST HAM

West Ham 6, Chelsea 1

In the absence of their usual left wing, Fagan and Mitten, Chelsea failed to produce the brilliant football which has earned them the right to meet Reading in the South Cup semi-final at Tottenham next Saturday. West Ham beat them soundly by 6—1. Near goal, West Ham always looked the more dangerous side, but in an entertaining opening half the solid defence of Hardwick, Westwood and Harris, and the methodical wing-half play of Russell and Foss, kept Chelsea prominent. At times the ball control reached a high standard, with Goulden and Macaulay the West Ham artists, and Bowie and Russell equally good for Chelsea.

Until he was overwhelmed, Woodley kept goal perfectly, but in the twenty-sixth minute Goulden showed his genius for turning a desperate situation. As Chelsea threatened Medhurst, Goulden coolly deceived two opponents, sent a long pass down the middle and Foreman touched it on for Fenton to score. That goal enabled West Ham to lead at the interval, but within five minutes Payne equalised from a penalty. Then West Ham changed their close methods, and, indulging in sweeping passes, they combined splendidly, setting up constant attacks, whereas Chelsea deteriorated. An unsatisfactory type of goal finally sealed Chelsea's fate. Fenton headed on to the cross-bar, and the ball, after touching the ground, bounced out. The referee promptly awarded a goal, despite Chelsea protests. Next, while Foss was temporarily off the field, Woodley kicked the ball out of the ground, and N. Corbett sent the throw-in right in front of goal, where Goulden took full toll. West Ham now shaped like champions, and Small, who played well in the unaccustomed position of outside-left, shot two goals before Bicknell ran through from the right-back, exchanged a pass with Chapman, and drove home a perfect goal.

ATHLETICS

In a 4½ miles cross-country match at Hayes, Kent, Metropolitan Police tied with London University Tyrians at 18 pts. The winner was W. J. L. Sladen (Tyrians) in 27 min. 5 sec.

E. A. Staker (Highgate H.) retained his Middlesex road-walking title at Enfield. He covered the seven miles in 53 min. 12 sec.

R. G. Gosney, of the Eastleigh (Hants) A.C., scored his fourth win this season in race held by the Southern Counties Cross-Country Association when at Epsom over 7½ miles he beat George Hoath by about 100 yds. in 40 min. 7 sec.

ETON COLLEGE SPORTS

In the finals of the Eton College sports yesterday P. D. Blake, who is only just turned 16, won the School long jump with a leap of 19 ft. 2½ in. Wet Bobs defeated the Dry Bobs in the tug-of-war by two pulls to nil. Winners: Weight, P. F. Latthey, 35 ft. 9½ in.; 120 Yards High Hurdles, C. P. Cavendish; Quarter-mile, J. R. [illegible]

READING MAKE CERTAIN

ARSENAL CONCEDE FIVE GOALS

Reading 5, Arsenal 1

Reading were at the top of their form against the Arsenal, and in the second half they so overwhelmed their opponents that Mapson, the home goalkeeper, only kicked the ball when it was put back to him by his own players.

Although Reading held the upper hand in the first half there were few signs of their overwhelming victory during this period, and the interval score of 2—1 was about correct, albeit the Arsenal goal was in the nature of a gift to them. Chitty scored within five minutes of the start, and Reading held this lead for the next half an hour, when Goldberg miskicked in attempting to send back to his goalkeeper, letting Drake in to score. Almost immediately Williams, the Aberdeen outside left, playing his second game for Reading this season, put Reading in front again.

Goals came in quick succession in the second half, Edelston and McPhee (2) scoring in that order. So tight a hold did the Reading defence keep on the visiting forwards that the Arsenal defence could only resort to bigger kicking tactics. This got them nowhere and only made Reading's task the more easy. Scott was the only Arsenal defender to produce form up to any standard, and he found things extremely difficult when he was switched over in the second half in an attempt to deal with Williams, who was Reading's most lively forward. Reading owed their big win mainly to their fine team work, their wing half-backs, Busby, the Scottish captain, and Layton being outstanding for the manner in which they assisted the attack.

WASPS IN COMMAND

DESERVED VICTORY OVER MIDDLESEX HOSPITAL

Wasps 10 pts., Middlesex Hospital 3

With their forwards dominating a large part of a virile game, Wasps retained an early lead to register a deserved win over Middlesex Hospital by a dropped goal and two tries to a try. Wasps possessed a solid pack, and they were well supported by Morgan at scrum-half, who was always in the picture and revealed a damaging turn of speed. Leishman and O'Brien were outstanding forwards, while Allen, at full-back, proved a grand stumbling-block for the Hospital pack.

Lee scored the first try for Wasps after a desperate tussle just inside the line. Wasps were later awarded four scrums a yard from the touch-line, but somehow their opponents managed to scramble clear. A minute later, Morgan raced away on his own to drop a goal for the Wasps with a perfect kick. Leishman got the other try for the home side, but the best effort came from Colson, who manoeuvred round half a dozen opponents before touching-down for the losers.

PUBLIC SCHOOL SEVENS

DRAW FOR TWO ROUNDS OF ROSSLYN PARK TOURNEY

The draw for the first and second rounds of the Rosslyn Park Public Schools Seven-a-Side Rugby Tournament, to be played at Old Deer Park, Richmond, on Tuesday and Wednesday, April 4 and 5, is:

First Round: (A) Merchant Taylors' v. Haberdashers' Aske's, (B) Christ's Hospital v. Bancroft's, (C) Sevenoaks v. Wellington, (D) Whitgift v. St. George's, Harpenden, (E) Oratory v. Cranleigh, (F) Tiffin's v. St. Edmund's, Ware, (G) City of London v. Sutton Valence, (H) Ellesmere v. St. Paul's, (I) Epsom v. St. Albans, (J) Hurstpierpoint v. St. John's, Leatherhead, (K) Dulwich v. Beaumont, (L) Framlingham v. Emanuel, (M) Kingswood v. Dauntsey's, (N) City of London School, Gloucester v. Mill Hill, (O) K.C.S., Wimbledon v. Eastbourne, (P) Queen Elizabeth's v. Cheshunt.

Second Round: Winners of (A) v. Claresmore, (B) v. St. Edward's, Oxford, (C) v. Wycliffe, (D) v. Bedford, (E) v. R.N.C., Dartmouth, (F) v. Haileybury and I.S.C., (G) v. Wrekin, (H) v. Blundell's, (I) v. Clifton, (J) v. Tonbridge, (K) v. Rugby, (L) v. Harrow, Mdx., (M) v. Cranbrook, (N) v. Worksop, (O) v. Stowe, (P) v. Oundle.

U.C.S., King's, Taunton, and R.G.S., Guildford, will replace any teams that drop out.

HEAD OF THE RIVER RACES

Imperial College B.C. (A crew) won the Head of the River race from Chiswick Steps to Putney Bridge in 11 min. 52 sec., with Barnes R.C., stroked by Bert Barry, former sculling world champion, second in 11 min. [illegible]

ROSSLYN PARK TRIUMPH

GUY'S TACTICS KEEP SCORE DOWN

By J. P. JORDAN

Guy's Hospital 0 pts., Rosslyn Pk. 10

For the most part play was rather scrappy at Honor Oak Park, where Guy's Hospital, in their last home match of the season, lost to Rosslyn Park by two goals to nil.

While the Park deserved their victory, they were hardly ten points better than Guy's. Led by A. B. Lee, the lighter Guy's forwards held their own splendidly with J. R. Tyler and his men. Although Tyler got the ball more often, the Hospital's quick breaking-up and spoiling tactics upset many a Park passing movement. Unfortunately for the Hospital they had no midfield player with the powerful thrust of Claude Davey, who gave many lessons to the young Guy's backs on the value of straight running, and proved to them how costly it is to attempt to tackle a resolute runner high.

A typical burst by Davey through the centre while Guy's were attacking brought about the first score. The Park were in their own "25" when the ball was passed on to the Welsh international, who shook off several would-be tacklers of the net-grabbing order, strode down the centre of the field and gave F. T. Naylor a clear run in between the posts. K. H. Chapman converted the try just before half-time.

Guy's should have knocked off 3 points of this lead later, but E. W. Graham missed an easy shot at a penalty goal, and then the Park clinched their victory with another goal. This time it was the Park's Irish scrum-half, H. de Lacey, who made it. He had been playing his usual unobtrusive but highly effective game, giving his partner, N. A. Steele, a steady flow of passes, when suddenly he darted off on his own, sold a perfect dummy and sent R. Taylor racing away with a Guy's man in pursuit. Taylor just reached the goal-line and Chapman made no mistake with the kick.

UNBEATEN COVENTRY

ST. BART.'S THEIR 56th CONSECUTIVE VICTIMS

St. Bart's Hospital 5 pts., Coventry 32

In beating St. Bartholomew's Hospital by four goals, one penalty goal, and three tries to a goal Coventry gained their 56th consecutive win, not having lost a game during this or last season. Bart's played well despite their beating, but they lacked the complete cohesion and thrust of Coventry.

F. Gilbert opened the scoring for Coventry with a good try which followed neat inter-passing. Then Stock and Preece, the halves, combined for a second try, which Preece scored. W. Brown got another try, and, with E. Wright kicking two goals and a penalty goal, Coventry had a 16 pts. to nil lead at the interval.

Coventry continued to score after changing ends. Stock got his second try by again combining with Preece, Gilbert goaling. Then W. Webb got over for an unconverted try. Bart's were now having more of the play, and at last got through the Coventry defence, P. Hawkes making an opening for R. J. Pitman to cut through and score, Hawkes converting. Harold Wheatley, however, added to Coventry's score, Gilbert kicking another goal, and to end things Preece got over for his third try, which remained unconverted.

WELSH FIFTEEN

FOUR CHANGES IN SIDE TO MEET ENGLAND

Wales have made four changes for the return Services International against England at Gloucester on April 8. One of these brings back to big football F/O. Idwal Davies, the Swansea centre, who has not appeared in an International since he played against England in 1939. The other alterations are all forward—two of them in the front row, where Lt. V. J. Law and Sergt. W. H. Travers come in to complete an all-Newport rank with Sergt. W. O. Jones. Gnr. R. G. Coleman, also of Newport, is a newcomer to International games. Cpl. R. Flowers, Lance-Sergt. R. Rowlands and Sergt. E. L. Bevan are passed over.

Team: Sergt. Alban Davies (Army and Newport); Cpl. Alan Edwards (R.A.F. and Salford), Sergt. T. Sullivan (Army and Swansea), F/O. Idwal Davies (R.A.F. and Swansea), Sid Williams (Army and Aberavon); Sergt. W. H. T. Davies (R.A.F. and Bradford Northern) (Capt.), Lt. H. Tanner (Army and Swansea); Lt. V. J. Law (Army and Newport), Sergt. W. H. Travers (Army and Newport), Sergt. W. O. Jones (Army and Newport), Gnr. R. G. Coleman (Army and Newport), Gnr. Rees Williams (Army and Swansea), Sergt. Trevor Foster (Army and Bradford Northern), Lt. W. E. Tamplin (Army [illegible]

READING MAKE CERTAIN

ARSENAL CONCEDE FIVE GOALS

Reading 5, Arsenal 1

Reading were at the top of their form against the Arsenal, and in the second half they so overwhelmed their opponents that Mapson, the home goalkeeper, only kicked the ball when it was put back to him by his own players.

Although Reading held the upper hand in the first half there were few signs of their overwhelming victory during this period, and the interval score of 2—1 was about correct, albeit the Arsenal goal was in the nature of a gift to them. Chitty scored within five minutes of the start, and Reading held this lead for the next half an hour, when Goldberg miskicked in attempting to send back to his goalkeeper, letting Drake in to score. Almost immediately Williams, the Aberdeen outside left, playing his second game for Reading this season, put Reading in front again.

Goals came in quick succession in the second half, Edelston and McPhee (2) scoring in that order. So tight a hold did the Reading defence keep on the visiting forwards that the Arsenal defence could only resort to bigger kicking tactics. This got them nowhere and only made Reading's task the more easy. Scott was the only Arsenal defender to produce form up to any standard, and he found things extremely difficult when he was switched over in the second half in an attempt to deal with Williams, who was Reading's most lively forward. Reading owed their big win mainly to their fine team work, their wing half-backs, Busby, the Scottish captain, and Layton being outstanding for the manner in which they assisted the attack.

WASPS IN COMMAND

DESERVED VICTORY OVER MIDDLESEX HOSPITAL

Wasps 10 pts., Middlesex Hospital 3

With their forwards dominating a large part of a virile game, Wasps retained an early lead to register a deserved win over Middlesex Hospital by a dropped goal and two tries to a try. Wasps possessed a solid pack, and they were well supported by Morgan at scrum-half, who was always in the picture and revealed a damaging turn of speed. Leishman and O'Brien were outstanding forwards, while Allen, at full-back, proved a grand stumbling-block for the Hospital pack.

Lee scored the first try for Wasps after a desperate tussle just inside the line. Wasps were later awarded four scrums a yard from the touch-line, but somehow their opponents managed to scramble clear. A minute later, Morgan raced away on his own to drop a goal for the Wasps with a perfect kick. Leishman got the other try for the home side, but the best effort came from Colson, who manœuvred round half a dozen opponents before touching-down for the losers.

PUBLIC SCHOOL SEVENS

DRAW FOR TWO ROUNDS OF ROSSLYN PARK TOURNEY

The draw for the first and second rounds of the Rosslyn Park Public Schools Seven-a-Side Rugby Tournament to be played at Old Deer Park, Richmond, on Tuesday and Wednesday, April 4 and 5, is:

First Round: (A) Merchant Taylors' v. Haberdashers' Aske's, (B) Christ's Hospital v. Bancroft's, (C) Sevenoaks v. Wellington, (D) Whitgift v. St. George's, Harpenden, (E) Oratory v. Cranleigh, (F) Tiffin's v. St. Edmund's, Ware, (G) City of London v. Sutton Valence, (H) Ellesmere v. St. Paul's, (I) Epsom v. St. Albans, (J) Hurstpierpoint v. St. John's, Leatherhead, (K) Dulwich v. Beaumont, (L) Framlingham v. Emanuel, (M) Kingswood v. Dauntsey's, (N) Crypt School, Gloucester, v. Mill Hill, (O) K.C.S. Wimbledon, v. Eastbourne, (P) Queen Elizabeth's v. Cheshunt.

Second Round: Winners of (A) v. Clayesmore, (B) v. St. Edward's, Oxford, (C) v. Wycliffe, (D) v. Bedford, (E) v. R.N.C. Dartmouth, (F) v. Haileybury and I.S.C., (G) v. Wrekin, (H) v. Blundell's, (I) v. Cotton, (J) v. Tonbridge, (K) v. Rugby, (L) v. Harrow, Mdx., (M) v. Cranbrook, (N) v. Worksop, (O) v. Stowe, (P) v. Oundle.

U.C.S., King's, Taunton, and R.G.S. Guildford, will replace any teams that drop out.

HEAD OF THE RIVER RACES

Imperial College B.C. (A crew) won the Head of the River race from Chiswick Steps to Putney Bridge in 11 min. 52 sec., with Barnes R.C., stroked by Bert Barry, former sculling world champion, second, in 11 min.

ROSSLYN PARK TRIUMPH

GUY'S TACTICS KEEP SCORE DOWN

By J. P. JORDAN

Guy's Hospital 0 pts., Rosslyn Pk. 10

For the most part play was rather scrappy at Honor Oak Park, where Guy's Hospital, in their last home match of the season, lost to Rosslyn Park by two goals to nil.

While the Park deserved their victory, they were hardly ten points better than Guy's. Led by A. B. Lee, the lighter Guy's forwards held their own splendidly with J. R. Tyler and his men. Although Tyler got the ball more often, the Hospital's quick breaking-up and spoiling tactics upset many a Park passing movement. Unfortunately for the Hospital they had no midfield player with the powerful thrust of Claude Davey, who gave many lessons to the young Guy's backs on the value of straight running, and proved to them how costly it is to attempt to tackle a resolute runner high.

A typical burst by Davey through the centre while Guy's were attacking brought about the first score. The Park were in their own "25" when the ball was passed on to the Welsh international, who shook off several would-be tacklers of the net-grabbing order, strode down the centre of the field and gave F. T. Naylor a clear run in between the posts. K. H. Chapman converted the try just before half-time.

Guy's should have knocked off 3 points of this lead later, but E. W. Graham missed an easy shot at a penalty goal, and then the Park clinched their victory with another goal. This time it was the Park's Irish scrum-half, H. de Lacey, who made it. He had been playing his usual unobtrusive but highly effective game, giving his partner, N. A. Steele, a steady flow of passes, when suddenly he darted off on his own, sold a perfect dummy and sent R. Taylor racing away with a Guy's man in pursuit. Taylor just reached the goal-line and Chapman made no mistake with the kick.

UNBEATEN COVENTRY

ST. BART.'S THEIR 56th CONSECUTIVE VICTIMS

St. Bart's Hospital 5 pts., Coventry 32

In beating St. Bartholomew's Hospital by four goals, one penalty goal, and three tries to a goal, Coventry gained their 56th consecutive win, not having lost a game during this or last season. Bart's played well despite their beating, but they lacked the complete cohesion and thrust of Coventry.

F. Gilbert opened the scoring for Coventry with a good try which followed neat inter-passing. Then Stock and Preece, the halves, combined for a second try, which Preece scored. W. Brown got another try, and, with F. Wright kicking two goals and a penalty goal, Coventry had a 15 pts. to nil lead at the interval.

Coventry continued to score after changing ends. Stocks got his second try by again combining with Preece, Gilbert goaling. Then W. Webb got over for an unconverted try. Bart's were now having more of the play, and at last got through the Coventry defence, P. Hawkes making an opening for R. J. Pitman to cut through and score, Hawkes converting. Harold Wheatley, however, added to Coventry's score, Gilbert kicking another goal, and to end things Preece got over for his third try, which remained unconverted.

WELSH FIFTEEN

FOUR CHANGES IN SIDE TO MEET ENGLAND

Wales have made four changes for the return Services International against England at Gloucester on April 8. One of these brings back to big football F. O. Idwal Davies, the Swansea centre, who has not appeared in an International since he played against England in 1939. The other alterations are all forward—two of them in the front row, where Lt. V. J. Law and Sergt. W. H. Travers come in to complete an all-Newport tank with Sergt. W. O. Jones. Gnr. R. G. Coleman, also of Newport, is a newcomer to International games. Cpl. R. Flowers, Lance-Sergt. R. Rowlands and Sergt. E. L. Bevan are passed over.

Team: Sergt. Alban Davies (Army and Newport), Cpl. Alan Edwards (R.A.F. and Salford), Sergt. T. Sullivan (Army and Swansea), F. O. Idwal Davies (R.A.F. and Swansea), Sid Williams (Army and Aberavon), Sergt. W. H. T. Davies (R.A.F. and Bradford Northern) (Capt.), Lt. H. Tanner (Army and Swansea), Lt. V. J. Trevor Foster (Army and Swansea), Sergt. Trevor Foster (Army and Bradford Northern), Lt. W. E. Tamplin (Army

FINE KICKING BY DAVIES

ROBS LONDON OF SUCCESS

By D. R. GENT

S.E. Command 16 pts., London District 10

S.E. Command beat London District at Richmond by three goals (one penalty) and a try to two goals. The sides were evenly matched, and had it not been for fine kicking by Alban Davies London might have won. With him in the centre was L. F. Oakley, who did so well for England last week. In this game, however, he was not so good, though he got a nice try.

R. F. Hayman was on the right wing for the Army, though apparently chosen as outside half, where I should have preferred to see him. He looked a capital player. The best forward of the side was J. Wareing, while S. T. Howard Jones, at full-back, fielded and kicked well. For the losers I liked the forwards best. All were triers and dribbled and tackled splendidly, with J. Lewis, O. Williams, and J. E. Grosse particularly good. P. R. Hastings was at outside half, and at times opened out the game nicely for his backs, though none of the others was outstanding.

CLEVER FEINTS

London were on top for the first fifteen minutes and scored first through P. R. Hastings. He made off for the open and then cleverly cut inside. The defence was completely beaten, and Hastings scored near the posts, for J. Caldicott to kick a goal. The Command soon replied. Davies got the ball in a passing movement, and he, too, with a clever feint, cut inside. Oakley was handy in support, and he took a perfect pass which enabled him to walk the last few yards towards the posts. Davies converted. Had not Caldicott missed two fairly easy penalty kicks London would have led at half-time.

The second Command try came soon after the interval. Davies started it with a run towards the touchline, and his wing, Hayman, cut inside to take a clever reverse pass. A kick ahead, a tangled defence, and Hayman was quick enough to get the touch down. Next it was the turn of the forwards. F. B. Dunkley, A. J. Lewis, and A. A. Brown, the old English forward, ran and passed extremely well, with the result that Brown scored between the posts, and Davies kicked an easy goal. Two more scores were to come, a magnificent penalty goal by Davies for the Command and a splendid try for London. N. H. Humphries, a fine upstanding centre, made a strong run up the middle of the field, to find Jefferies ready and willing to take a pass that enabled him to score between the posts. Caldicott converted again.

SPECIAL SERVICE
MEMO No.......1

OFFICERS HISTORICAL TOURS

1. Another Historical tour, the third of a series has been arranged for Sunday, 14 May 1944. The place to be visited is Kew Gardens.

2. Kew is the name of a village in Surrey, near Richmond located on the right bank of the river Thames. Foremost among objects of interest at Kew are the Royal Botanical Gardens, containing magnificent collections of plants and flowers both native and many more that have been imported from all parts of the world. Established in 1760 by the mother of George III and made a national institution in 1841 the gardens now extend over nearly 300 acres and have better than a million visitors each year.

3. In addition to numerous hot houses and conservatories the principle features are a palm house 362 feet long, 100 feet wide, and 66 feet high, also a temperate house of the same height occupying three fourths of an acre, four museums, a laboratory, the north gallery containing sketches from nature taken in different parts of the world, and the Pagoda Inn, an octagonal, ten story building.

4. To the south [illegible] of the gardens is an observatory chiefly used as a Meteorological station, here are kept the thermometers and other Meteorological and Magnetical instruments which serve as standards for the United Kingdom. Close to the northern entrances is Kew Palace formerly a favorite residence of George III and Queen Charlotte who died there.

5. In the church built in 1714 and subsequently enlarged, is an organ presented by George IV said to have been used by Handel, and in the Churchyard adjoining are the graves of Gainsborough and the two less known artists, Meyer and Zoffany.

6. The bus will leave Stanmore Hall promptly at 1330. All officers of this Headquarters including RAF, WAAF and WAC personnel are cordially invited. All who are interested in attending will sign their names on the bulletin board in the Officers Mess. WAC and WAAF Officers may contact the Special Service Office, Ext 717, for reservations.

7. The curator of the Botanical Gardens has been contacted and has offered to act as guide so none of the highlights of the trip will be missed.

A. J. POPE,
1st Lt, Air Corps,
Special Service Officer.

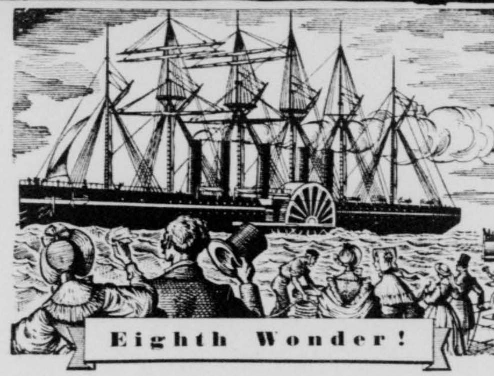
Portrait of a young man discovering early in life that you can't put the clock back. Never mind ! It was a poor clock anyway. When the hands said 4.25 the time was roughly a quarter to six. Not good enough for this lad. He took it to bits to find out why.

This is the kind of boy who'll be coming to us in a few years for a job — and he's likely to get one.

His technique is a bit clumsy but he has the right idea. We, too, spend a good deal of thought on slow and unsatisfactory processes in industry. We like to take the thing to bits, and see why it's made that way, and how to save lost time. And if speeding up means scrapping the clock and designing a new one, well, Simmonds have done that in more than one instance.

Are you losing time anywhere ? Then you might let us " have a go " at the problem.



finding new and better ways

It took five years to build the Great Eastern, eighth wonder of the world in the eighteen fifties, with her five funnels, paddle wheels, screw propeller, complete suit of sails . . . and a speed of fourteen knots. To-day we build better, faster ships in as many months—or even weeks. Much of the credit for this speed-up must go to the oxy-acetylene flame cutter, with which ships' plates are cut to shape in a fraction of the time taken by the traditional methods. The development of new ways of using gases in industry and medicine is the constant care of the scientists of the liquid oxygen and compressed gas industry, which is also responsible for the daily production and distribution of millions of cubic feet of oxygen and many other gases equally essential in war and peace.

AIR SEA RESCUE CRAFT

The smallest steel tube is a hypodermic needle made by Accles & Pollock. Now, without even stepping into a lift, we'll take you to our outsize department where the Chesterfield Tube Company makes a tube as big as this in the form of a bottle. It weighs thirteen tons, is twenty-four feet long and has a bore of thirty-two inches. Filled with air under pressure it enables huge presses to be operated hydraulically. Which all goes to show that if you want the smallest tube in the world or one approaching the other extreme or anything in between, one of the Tube Investments group of companies can look after you.

LONDON NEWS

SATURDAY, FEBRUARY 5, 1944.

GENERAL ALEXANDER ON THE ANZIO-NETTUNO FRONT, SOUTH OF ROME: THE C.-IN-C. OF THE ALLIED CENTRAL MEDITERRANEAN FORCE, WITH ADMIRAL TROUBRIDGE, WATCHES BRITISH SOLDIERS MINE-SWEEPING.

The carefully prepared and executed new landings at Nettuno early on Saturday, January 22, whereby the Germans were taken completely by surprise, steadily progressed fanwise, while reinforcements and supplies came pouring in. General Mark Clark, the American Commanding Officer of the Fifth Army, early made a dawn-to-dusk tour of the landing areas and expressed his delight with the progress of operations. The danger to Kesselring, with his nine divisions on the Cassino line, was increasing by January 27, and indications pointed to his attempt to fight a main battle in the Alban Hills, thirteen miles south of Rome, where stands the ancient Tusculum. In supreme control of the Allied Central Mediterranean Force is General Alexander, formerly commanding the 15th Army Group. He personally directed the landings at Nettuno and supervised early operations ashore, where, with Admiral Troubridge, he is seen watching mine-sweepers at work.

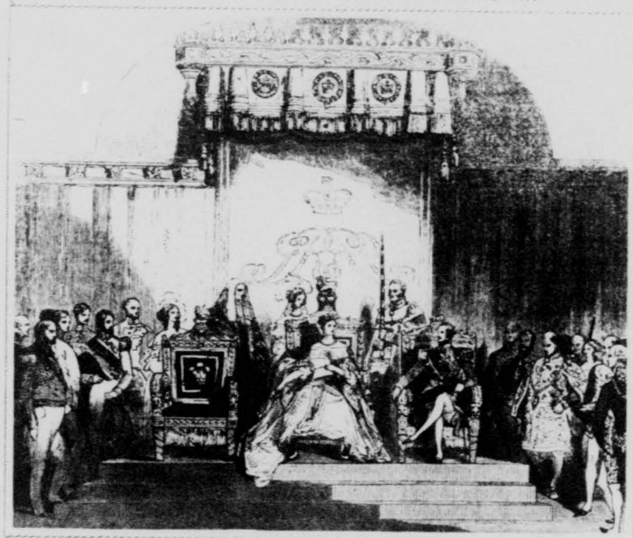
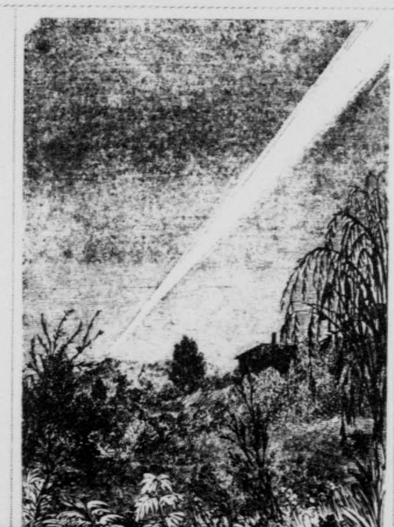
By ARTHUR BRYANT.

A FORTNIGHT ago, discussing the geographical and maritime reasons which, despite initial unpreparedness and neglect, have always enabled this country to emerge victorious in global war, I asked the rhetorical question: "Is the old story really true that one Englishman is worth three Frenchmen?" and then, to soften the crudity of the eighteenth-century traditional phrase, added "or half-a-dozen Germans." Owing to an unintentional error in the Editorial Department beyond my knowledge or control, my "three" was altered at the last moment to a "nine," thus conveying the impression that I thought that a German was a better fighter than a Frenchman! This made nonsense of what I had written and of what I had meant.



What constitutes fighting quality? No one who has had any experience of war—or, for that matter, ever read any military history—could suppose for a moment that racially a German *per se* is a braver fighter than a Frenchman (or even *vice versa*), or that an Englishman *per se* is a better fighter than either. There are some Englishmen who are worth three or even a dozen other Englishmen in battle; the same is true of Frenchmen and Germans. And there are times when Englishmen are very much better fighters than at other times, and this also is true of Frenchmen and Germans. The Prussians ran at Jena: they did not run at Bautzen seven years later. The French, too, have had their ups and downs; their Château Thierrys and Austerlitzes on the one hand, and their Sedans on the other. So have the English.

There are, of course, some races that seem fundamentally to fight better than others. The Pathans of India are notoriously a valiant breed; the Bengalis of the same vast land—though they have at times produced fine troops—are not renowned in history for martial prowess. In Europe, too, the same phenomenon occurs. The Neapolitans, for instance, have a poor fighting record; the hardy races of the north, which include the French, the Russians, the English, the Germans, and many smaller peoples, like the Dutch and Norwegians, a very good one. Deep-rooted factors of geography, climate and history have something to do with the matter. Yet I doubt if these are in any way decisive. A few generations—perhaps even one—in a different atmosphere, above all in a different political atmosphere, and a man of allegedly poor fighting stock will fight as well as the best. For courage in battle is far less a matter of heredity than of training, discipline, belief, example and environment. Men are not so much born brave as made brave: ask them at Caterham or Wellington Barracks. That is why I maintain that, other things being equal, a Frenchman is in historical fact, though not necessarily racially, a better soldier than a German. He may not have been so on the battlefields of 1940. But the reasons for that temporary failure were accidental and ephemeral. They had nothing to do with the permanent nature of France and the French people.



The French are philosophically—though they are many other things—a martial people. They regard

Revolution to find their proper level and use their full energies, the fighting men of France showed up the flaw in the formal discipline of the renowned monarchical armies of Prussia and Austria. An army of brave individualists beat an army of brave automata, and beat it again and again, till the latter had no fight left in it. Yet—and this is the important point—that victorious army was a body welded in passionate unity and willing discipline, and inspired by a noble cause. In 1940 the gallant descendants of the men of *Sambre et Meuse* were not so welded. And, as a consequence, they were defeated by the descendants of the men of the Potsdam barrack-square.

ONE HUNDRED YEARS AGO: REPRODUCTIONS AND QUOTATIONS FROM "THE ILLUSTRATED LONDON NEWS" OF FEBRUARY 3, 1844.

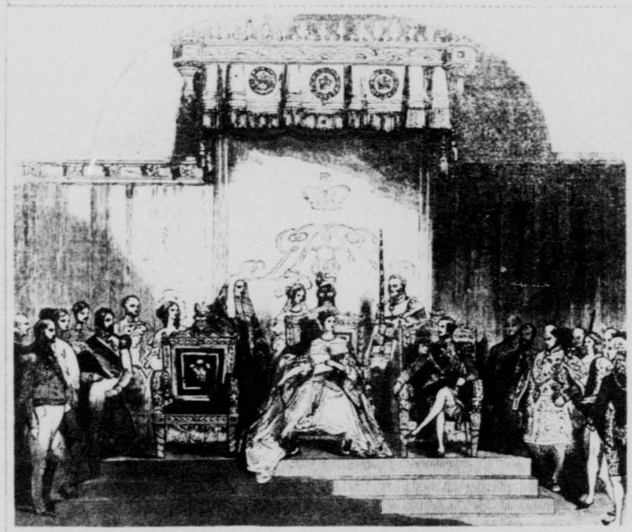
"THE THRONE IN THE HOUSE OF LORDS.—HER MAJESTY QUEEN VICTORIA'S SPEECH."
". . . Her Majesty took her seat on the throne. The Duke of Wellington, bearing the sword of state, stood immediately on her Majesty's left-hand. . . . Upon reference to the engraving of the throne it will be seen that one of the royal chairs is unoccupied, and bears the plume of three feathers, the crest of the Prince of Wales; such provision being made in the House of Lords from the period of his receiving the title. The corresponding chair is filled by his Royal Highness Prince Albert."

For in the years between their splendid victory in 1918 and the outbreak of the second world war in 1939, the French, like the English, came very near to losing their national soul. They were so successful in the material sphere that they grew temporarily unaccustomed to the spiritual. And it cannot be over-emphasised that in the ultimate resort—and this sounds a paradox—success in war is far more a test of the spirit than of inanimate matter. "God," wrote Voltaire, the man of the study who had never known the battlefield, "is always for the big battalions." Napoleon, the greatest soldier mankind has ever seen, knew better. "There are only two great Powers in the world," he said, "the Sword and the Spirit, and in the long run the Spirit always wins." The quality above all qualities which he looked for in his soldiers was *élan*; the Marshal or General he always preferred was never the prudent materialist, but the man who achieved the impossible. That is the true tradition of the French Army and the French fighting man. It was dormant in the sleepy, materialistic years between the wars—the years of the *petit bourgeois* of Laval, of the *Comité des Forges*, of the Maginot Line. It awoke in the hour of defeat when De Gaulle raised the flag of Lorraine and the Maid of Orleans. It will triumph over the brave but servile Teuton, as it has triumphed so often in the past, before this war has done. And it will not triumph merely by virtue of Allied numbers and Allied weight of metal. It will triumph on a fair field in its own right.

This is not to say that numbers, material and equipment do not count on the battlefield. They count immensely. The French, with their lower population, were outnumbered in 1940 by nearly two to one. And their troops, like ours, were cruelly handicapped by a deficiency in arms, both in quantity and quality. But these handicaps themselves arose from a failure of spirit in the years of peace. They were the price France had to pay for putting material comfort, wealth and personal self-importance above self-sacrifice and love of country, liberty and truth. It was not till De Gaulle set up the standard of liberation in the dark summer of 1940 that the true France began—in poverty, subjection and exile—to live again. And now her strength—the strength of the phœnix and the eagle—is growing daily. Before long it will become visible, as it became visible many times before in France's long and glorious history.

It is hard to express in words in what the spirit of France resides. It is easier, like all spiritual qualities, to express in music. Listen next time with attentive, analytical ears, when a passing band or the radio plays the great marching song of Free France. There in the March of Lorraine one can find it all: the alert, confident, marching men, the bright-eyed girls, free as the wind, in all the pride

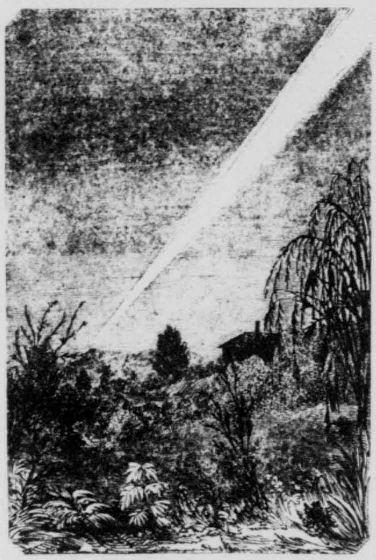
By ARTHUR BRYANT.



A FORTNIGHT ago, discussing the geographical and maritime reasons which, despite initial unpreparedness and neglect, have always enabled this country to emerge victorious in global war, I asked the rhetorical question: "Is the old story really true that one Englishman is worth three Frenchmen?" and then, to soften the crudity of the eighteenth-century traditional phrase, added "or half-a-dozen Germans." Owing to an unintentional error in the Editorial Department beyond my knowledge or control, my "three," was altered at the last moment to a "nine," thus conveying the impression that I thought that a German was a better fighter than a Frenchman! This made nonsense of what I had written and of what I had meant.

What constitutes fighting quality? No one who has had any experience of war—or, for that matter, ever read any military history—could suppose for a moment that racially a German *per se* is a braver fighter than a Frenchman (or even *vice versa*), or that an Englishman *per se* is a better fighter than either. There are some Englishmen who are worth three or even a dozen other Englishmen in battle; the same is true of Frenchmen and Germans. And there are times when Englishmen are very much better fighters than at other times, and this also is true of Frenchmen and Germans. The Prussians ran at Jena: they did not run at Bautzen seven years later. The French, too, have had their ups and downs; their Château Thierrys and Austerlitzes on the one hand, and their Sedans on the other. So have the English.

There are, of course, some races that seem fundamentally to fight better than others. The Pathans of India are notoriously a valiant breed; the Bengalis of the same vast land—though they have at times produced fine troops—are not renowned in history for martial prowess. In Europe, too, the same phenomenon occurs. The Neapolitans, for instance, have a poor fighting record; the hardy races of the north, which include the French, the Russians, the English, the Germans, and many smaller peoples, like the Dutch and Norwegians, a very good one. Deep-rooted factors of geography, climate and history have something to do with the matter. Yet I doubt if these are in any way decisive. A few generations—perhaps even one—in a different atmosphere, above all in a different political atmosphere, and a man of allegedly poor fighting stock will fight as well as the best. For courage in battle is far less a matter of heredity than of training, discipline, belief, example and environment. Men are not so much born brave as made brave; ask them at Caterham or Wellington Barracks. That is why I maintain that, other things being equal, a Frenchman is in historical fact, though not necessarily racially, a better soldier than a German. He may not have been so on the battlefields of 1940. But the reasons for that temporary failure were accidental and ephemeral. They had nothing to do with the permanent nature of France and the French people.



The French are philosophically—though they are many other things—a martial people. They regard cowardice in battle as highly dishonourable; devotion to duty in the face of death and the enemy as the highest of virtues. Above all, they regard courage as an inherently individual virtue, and not merely as a matter of slavish, herd obedience, which is the poison at the root of the German conception of courage. In 1794—that glorious year for Frenchmen—the French people showed that, man for man, they were better fighters than any Germans. Allowed by their Revolution to find their proper level and use their full energies, the fighting men of France showed up the flaw in the formal discipline of the renowned monarchical armies of Prussia and Austria. An army of brave individualists beat an army of brave automata, and beat it again and again, till the latter had no fight left in it. Yet—and this is the important point—that victorious army was a body welded in passionate unity and willing discipline, and inspired by a noble cause. In 1940 the gallant descendants of the men of *Sambre et Meuse* were not so welded. And, as a consequence, they were defeated by the descendants of the men of the Potsdam barrack-square.

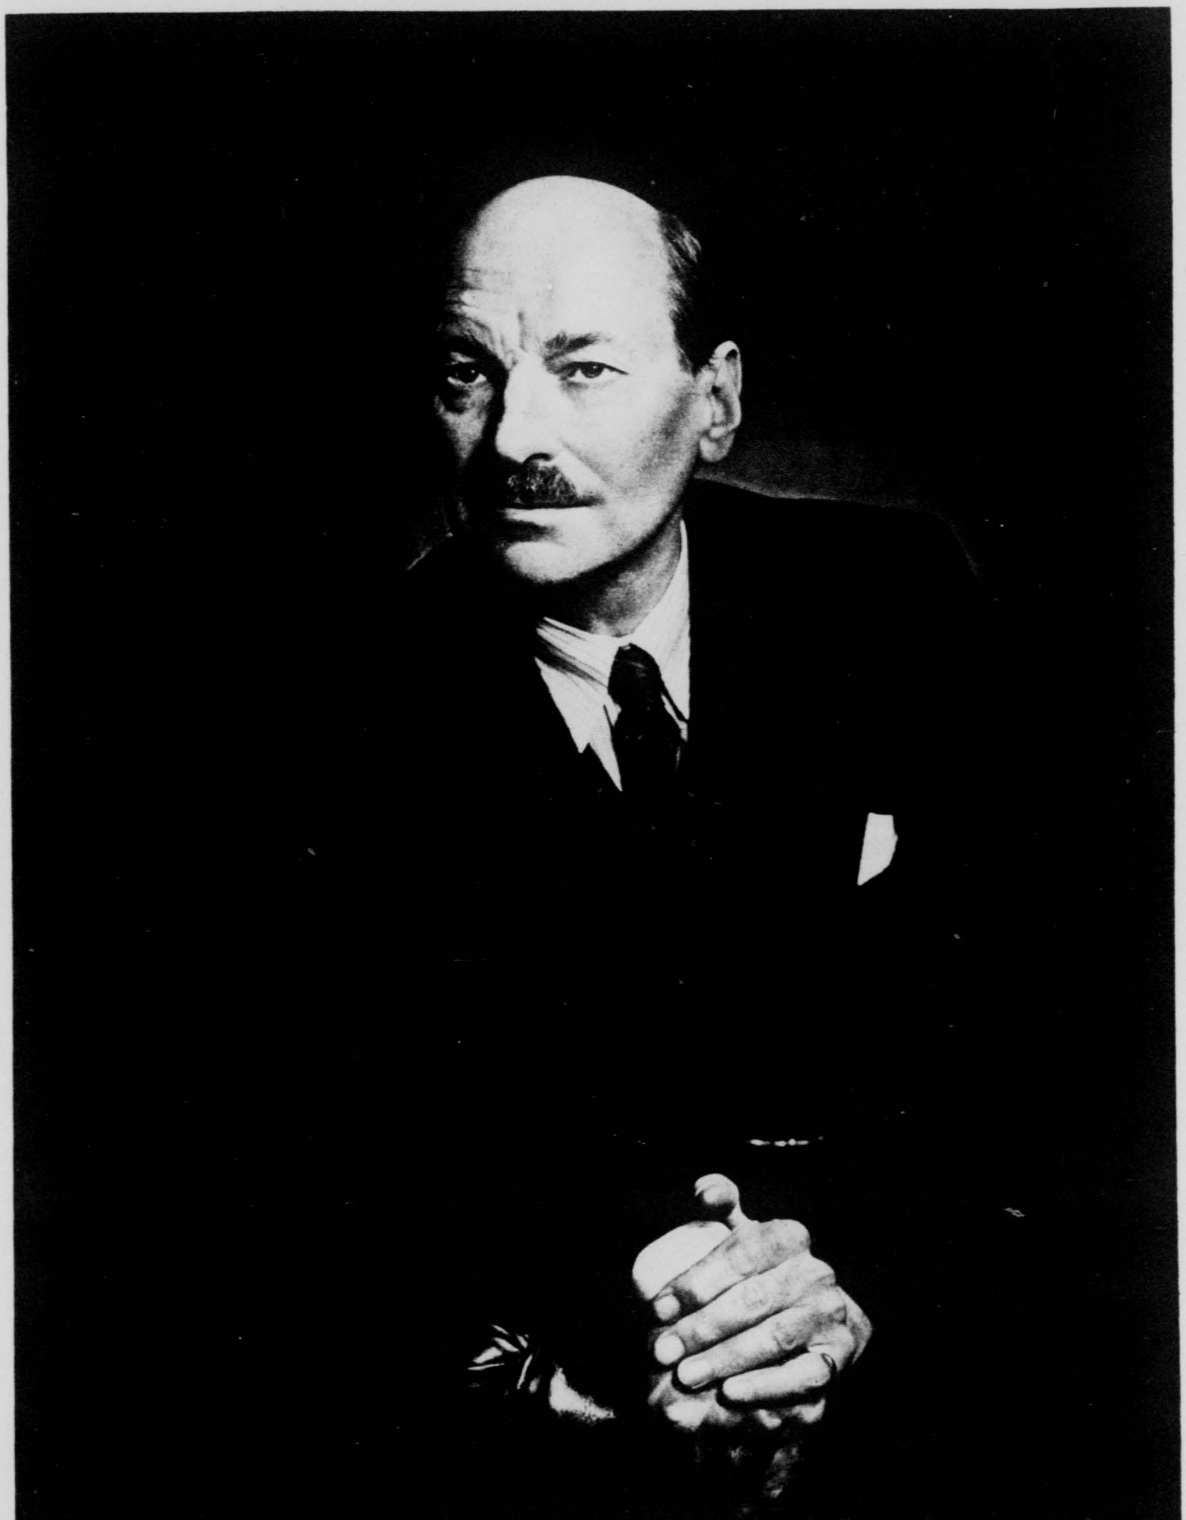
ONE HUNDRED YEARS AGO: REPRODUCTIONS AND QUOTATIONS FROM "THE ILLUSTRATED LONDON NEWS" OF FEBRUARY 3, 1844.

"THE THRONE IN THE HOUSE OF LORDS.—HER MAJESTY QUEEN VICTORIA'S SPEECH."

". . . Her Majesty took her seat on the throne. The Duke of Wellington, bearing the sword of state, stood immediately on her Majesty's left-hand. . . . Upon reference to the engraving of the throne, it will be seen that one of the royal chairs is unoccupied, and bears the plume of three feathers, the crest of the Prince of Wales; such provision being made in the House of Lords from the period of his receiving the title. The corresponding chair is filled by his Royal Highness Prince Albert."

"'THE GREAT COMET,' SEEN AT VAN DIEMEN'S LAND."

"We are indebted to a Staffordshire correspondent for the original of the above sketch of 'The Great Comet' of last year, as seen in the southern hemisphere. The locality is in the neighbourhood of Hobart Town; and the scene has been effectively lithographed by Mrs. Allport, of Aldridge Lodge, by whom it was forwarded to this country per ship "Endira."



For in the years between their splendid victory in 1918 and the outbreak of the second world war in 1939, the French, like the English, came very near to losing their national soul. They were so successful in the material sphere that they grew temporarily unaccustomed to the spiritual. And it cannot be over-emphasised that in the ultimate resort—and this sounds a paradox—success in war is far more a test of the spirit than of inanimate matter. "God," wrote Voltaire, the man of the study who had never known the battlefield, "is always for the big battalions." Napoleon, the greatest soldier mankind has ever seen, knew better. "There are only two great Powers in the world," he said, "the Sword and the Spirit, and in the long run the Spirit always wins." The quality above all qualities which he looked for in his soldiers was *élan*; the Marshal or General he always preferred was never the prudent materialist, but the man who achieved the impossible. That is the true tradition of the French Army and the French fighting man. It was dormant in the sleepy, materialistic years between the wars—the years of the *petit bourgeois* of Laval, of the *Comit' des Forges*, of the Maginot Line. It awoke in the hour of defeat when De Gaulle raised the flag of Lorraine and the Maid of Orleans. It will triumph over the brave but servile Teuton, as it has triumphed so often in the past, before this war has done. And it will not triumph merely by virtue of Allied numbers and Allied weight of metal. It will triumph on a fair field in its own right.

This is not to say that numbers, material and equipment do not count on the battlefield. They count immensely. The French, with their lower population, were outnumbered in 1940 by nearly two to one. And their troops, like ours, were cruelly handicapped by a deficiency in arms, both in quantity and quality. But these handicaps themselves arose from a failure of spirit in the years of peace. They were the price France had to pay for putting material comfort, wealth and personal self-importance above self-sacrifice and love of country, liberty and truth. It was not till De Gaulle set up the standard of liberation in the dark summer of 1940 that the true France began—in poverty, subjection and exile—to live again. And now her strength—the strength of the phœnix and the eagle—is growing daily. Before long it will become visible, as it became visible many times before in France's long and glorious history.

It is hard to express in words in what the spirit of France resides. It is easier, like all spiritual qualities, to express in music. Listen next time with attentive, analytical ears, when a passing band or the radio plays the great marching song of Free France. There in the March of Lorraine one can find it all: the alert, confident, marching men, the bright-eyed girls, free as the wind, in all the pride of their new *sabots*, the gleam of bayonets, the spires of churches, the shiver of the poplars and the flowing grace of the great rivers, the blue hills, the friendly towns, the noble vines, the industrious, skilful peasants and their astonishing, indefatigable wives, the grace, the *élan*, the glory of France. And when all France is imbued once more with that spirit, how many jack-booted Nazis will a Frenchman be worth then?

MEN WHO SHAPE OUR DESTINIES: No. 5—MR. ATTLEE, DEPUTY PRIME MINISTER.

AN EXCLUSIVE PORTRAIT STUDY BY Y. KARSH, OF OTTAWA.

PRIME MINISTER THE RT. HON. CLEMENT RICHARD ATTLEE, M.P.

MEN WHO SHAPE OUR DESTINIES: No. 5—MR. ATTLEE, DEPUTY PRIME MINISTER.

AN EXCLUSIVE PORTRAIT STUDY BY Y. KARSH, OF OTTAWA.

LORD PRESIDENT OF THE COUNCIL AND DEPUTY PRIME MINISTER—THE RT. HON. CLEMENT RICHARD ATTLEE, M.P.

This week's study by Y. Karsh, of Ottawa, is a portrait of Mr. Attlee, Deputy Prime Minister since 1942. Mr. Attlee served in the last war in the South Lancashire Regiment and Tank Corps, retiring as a Major in 1919. He was Mayor of Stepney in 1919 and 1920, and Parliamentary Private Secretary to the Leader of the Opposition from 1922-24. That year saw him Under-Secretary of State for War, and from 1930-31 he was Chancellor of the Duchy of Lancaster. In 1931 he held the post of Postmaster-General, and also became Deputy Leader of the Labour Party in the House of Commons. From 1935-40 he was Leader of the Opposition; Lord Privy Seal, 1940-42, and then Deputy Prime Minister and Secretary of State for the Dominions, relinquishing the latter position to become Lord President of the Council. Mr. Attlee has been Member (Lab.) for the Limehouse Division since November 1922.

AN AERIAL VIEW OF THE MONASTERY, FIRST FOUNDED BY ST. BENEDICT IN 529 A.D.: ITS ARCHIVES CONTAIN PRICELESS MSS. AND OTHER TREASURES.

A VIEW OF THE TOWN OF CASSINO, DOMINATED BY LA ROCCA, A THIRTEENTH-CENTURY RUINED CASTLE, FORMERLY CASINUM, WHERE MARK ANTONY HELD ORGIES.

Monte Cassino, so prominent in the battles leading to its capture by the Fifth Army, is an isolated hill overhanging the little town of Cassino, the *Casinum* of the Romans. It is historically of romantic note, for hither St. Benedict migrated from Sorbiaco in 529 A.D. and here established his famous monastery on the site of an ancient temple of Apollo to which Dante alludes in his "Paradise." The Benedictine monastery became the metropolis of Western monarchism. It was sacked by the Lombards, rebuilt in 720, destroyed by the Saracens in 884 and restored seventy years later. The abbot became overlord of an extensive territory and bishop of several dioceses, but at the dissolution of the monasteries in 1866 Monte Cassino became a national monument, the monks its custodians, to-day an ecclesiastical school holding a high reputation. The extensive edifice resembles a castle rather than a monastery and accommodates about 350 inmates. In its archives are preserved MSS. of priceless value, including the commentary of Origen on the Epistle to the Romans, which irreplaceable relics it is hoped the Germans may not pillage or destroy. The ancient *Casinum*, of probable Volscian origin, contained a villa belonging to Varro in which, later, Mark Antony, we are told by Cicero, indulged in wild orgies. La Rocca is a picturesque ruined castle, with a German donjon of the thirteenth-century Hohenstaufen era.

THE HARBOUR OF ANZIO, DESERTED IN THE MIDDLE AGES FOR NETTUNO—AS A PORT IT FREQUENTLY SILTS UP. A POPULAR SUMMER RESORT OF THE ROMANS.

Anzio and Nettuno, seized by the Fifth Army on January 22, when the carefully prepared landings were successfully engineered under the personal direction of General Alexander, lie only two miles apart. In the Middle Ages Anzio was deserted in favour of Nettuno because of the silting of the river, but in the seventeenth century it was restored, and the two towns are popular summer resorts of the Romans, many of whom own fine villas which have fortunately mainly escaped injury owing to the enemy's hasty retreat and inability to perform his demolition act. As *Antium*, Anzio is of considerable antiquity, at least from the fourth century B.C., for it is named as under Roman protection in the treaty with Carthage of 348 B.C. From later Republican times wealthy Romans, including the Julian and Claudian Emperors, frequently visited it. Both Caligula and Nero were born in *Antium*, and remains of Roman villas occur along the shore, both east and north-west of the town, many having tanks for pisciculture. Of the famous temple of Fortune mentioned by Horace no remains are found. The Volscian city stood on higher ground and was defended by walls and a deep ditch which can still be traced. The sea is encroaching slightly at Anzio, as is the case largely in the Mediterranean. In the National Museum of Rome is the famous "Maiden of Anzio," recovered from Nero's villa after a storm which laid it bare.

THE MIXED FRENCH CREW OF A HEAVY-CALIBRE MACHINE-GUN AT THEIR POST ON THE FIFTH ARMY FRONT, DURING AN AIR-RAID ALERT.

While British and American troops of the Fifth Army were fighting to enlarge their bridgehead south of Rome, French troops serving with the Fifth Army on the main front further south were engaged in gallant actions against desperate counter-attacks by the enemy. Correspondents have spoken of the great bravery of the French in the northern sector, who include home and native troops, the latter representing famous Moroccan and Goum regiments. In this northern sector of the Fifth Army's front line, in the area of Monte Croce, some two miles north-west of Cardito, the Germans launched a violent counter-attack on January 24, but were beaten off in desperate hand-to-hand fighting. Later in the day an even heavier German attack forced the French to withdraw from Monte Croce, but on the following day the French recaptured this important position and were reported to be pushing ahead steadily in difficult country, having captured more heights.

A BANTU TRIBE IN SOUTH AFRICA.

"THE REALM OF A RAIN-QUEEN": By E. JENSEN KRIGE and J. D. KRIGE.*

An appreciation by SIR JOHN SQUIRE.

N.B.—The illustration on this page is not from the book.

REALLY massive new anthropological books have been rare of late, but here is one. It is more massive than it looks; it has a deceptive look of slimness because of the use of very thin paper, and print so small that it taxes the eyes. But of its solidity and interest there is no doubt.

The authors are Field-Marshal Smuts's nephew and his wife, and their subject is "the least-known of our South African native tribes." The phrase "least-known" is used in the scientific sense; in a legendary way the Lovedu have been very widely known indeed. The tribe consists of only 33,000 persons; their district in the North-East Transvaal, never very large, has now been reduced by the "red ants" (*alias* white men, *alias* yellow devils!) to 150 square miles. But their religious, political and social structure is extremely complicated and coherent; several more volumes will be necessary before their manners and customs have been fully described; and at the centre of their system is a Rain-Maker so potent and august that the Great Zulu Kings did not disdain to send petitions to her, and the rumour of her and her people led to the conception of Rider Haggard's "She."

General Smuts himself, fascinated by reports of a divine "white queen," had contact with the Lovedu long ago. "One of my daughters, when a college girl, visited the country of the queen with a company of friends in the hope that they might be able to see her. In that mountainous, almost roadless country, the party was overtaken by a violent rainstorm, and late at night arrived at her headquarters drenched, exhausted and more dead than alive. The queen ordered a hut to be cleaned and prepared for them, where they stayed the night; and next day, having probably heard that she was the Prime Minister's daughter, gave a personal audience to her. Imagine the thrill! That established a personal bond between the queen and my wife, suitably recognised in the customary South African way. Then, many years after, my nephew and his wife were staying at the headquarters of the queen in order to gather the material for this book. From time to time they informed me of the interesting anthropological finds they were making. I also learnt that near her headquarters was a forest of cycads (*Encephalartos transvenosus Burtt-Davy*), one of the most unique botanical features in South Africa. This decided me at last to spend a holiday in the queen's country, and, with my relatives as guides, I had a most interesting experience. I saw how they had, through simple humanness, overcome the fears and the shyness

forest. Best of all, I saw that wonderful woman, well over sixty, but strong in body and character—every inch a queen. We exchanged information and gifts in the traditional style, and I could thank her for her kindness to my daughter in the distant past. She was much taken up with all the useful domestic articles my wife had sent her. A couple of years afterwards I was once more Prime Minister, and I received a most charming letter from her, expressing her pleasure that she had met and personally knew the man who was 'wearing the crown of South Africa.' Accepting the complimentary expression so kindly meant, I was equally pleased to have met a woman who so impressed me with her force of character and intangible air of authority—a woman who really was a queen. No wonder her subjects look upon her as the embodiment of their divine order. And yet that woman is the centre—in the ritual of her tribe—

The General remarks later, "The acid test of the investigator's understanding of the primitive people he studies is whether or not he makes sense of what appears to the ordinary observer as a mass of vices, follies and superstitions. That is the test that the authors have satisfied. In this book, customs and an outlook so different from ours as to be regarded from our point of view as irrational and perverted, emerge as perfectly natural and coherent—nay, inevitable in the total context of the culture." That is true; but the paradox of the intermingling of cultures between which a deep abyss yawns is illustrated by his own remarks about Queen Mujaji III. For that noble woman, who wrote to congratulate him upon being Premier again, is destined to ritual suicide, in her hut within a few miles of European farms.

The story goes back four centuries to a migration. There was a cycle of Rain-Making Kings. Then, 140 years ago, a cycle of Queens, begun and continued incestuously, started. There have been only three queens in that time. The suicide arrangements are not as grim as ritual murder. It is true that the Queen is expected to poison herself (with a mixture of ingredients from the crocodile) after a certain number of festivals of a certain kind; but she herself arranges the dates of the festivals. But there the thing is; and the doctrine is doubtless believed in by the victim as thoroughly as by her subjects. So also the efficacy of her rain-controlling powers. And these are remarkable. Africa is covered with witches and wizards who can bring rain. But the Queen of the Lovedu can actually, as is believed, bring rain upon one man's acres and not upon his neighbour's, according to their respective worthiness.

All this is remote from our conceptions of things; and there are many customs described in the book which the ordinary unscientific reader must find disgusting. Yet all settled communities of humans must live within the fixed framework of sleeping and waking, cultivating and eating and drinking, co-operating, litigating and worshipping, working in wood and clay and fibre; and there are many chapters in this book which, although crowded with exotic detail, are warm with our common humanity. The authors are, as writers, the very reverse of dry. Their styles are clear and vivid; they feel as well as observe; and they have eyes for the beautiful as well as for facts. But they are thoroughgoing as scientists, all the same, and they have learnt the

"THE SUN OF FREEDOM SHONE TO US THROUGH THE STORM": A DRAWING BY ANNA ZINKEISEN DONE ESPECIALLY FOR THE "AID TO RUSSIA" BALL, AND TO BE AUCTIONED AT THE BALL.

The Aid to Russia Ball, in support of Mrs. Churchill's Red Cross Aid to Russia Fund, is to be held at Grosvenor House, Park Lane, on Wednesday, February 9. At the ball will be auctioned the original of the drawing reproduced above, done specially for the occasion by Anna Zinkeisen. The caption for the picture, "The Sun of Freedom shone to us through the Storm," is taken from the words of the new Soviet Anthem.

The authors are, as writers, the very reverse of dry. Their styles are clear and vivid; they feel as well as observe; and they have eyes for the beautiful as well as for facts. But they are thoroughgoing as scientists, all the same, and they have learnt the language and its affinities. When they tell me, though, that "as in Sotho, the semi-flapped alveolar fricative, a phoneme of d, has not been distinguished from ordinary d," I am definitely out of my depth; although, after the fashion of M. Jourdain, I may have been using the semi-flapped alveolar fricative every day of my life.

SILHOUETTE OF A "COOKIE": A 4000-LB. BOMB JOINING RACKS OF INCENDIARIES IN A LANCASTER'S BOMB BAY.

Seen in silhouette against the sky at "bombing-up time," an R.A.F. "cookie"—one of the famous 4000-pounders which have been dropped in hundreds on Berlin in the recent raids—rises slowly into position in the capacious bomb bay of a Lancaster. Winches in the body of the bomber are hoisting the "cookie" into its rack, on either side of which are incendiary containers, each holding more than a hundred fire-bombs. The armourer's "thumbs-up" signal shows that everything is proceeding to his satisfaction. The load seen here is only a part of the bomb capacity of any Lancaster, which normally carries much heavier loads over Germany.

A MODERN "OLD BILL" WITH THE EIGHTH ARMY: CAPTAIN PERRY CADEGAN, OF NOVA SCOTIA, USING AN IMPROMPTU "CALL BOX."

ON THE EIGHTH ARMY FRONT, NEW ZEALANDERS DONNED WHITE CAPES IN THE SNOWY LANDSCAPE. TWO OF A PATROL ADVANCING WITH A RADIO TO REPORT.

NEW ZEALANDERS WITH WHITE CAPES AND HOODS PREPARE FOR A PATROL—TAKING A TIP FROM THE RUSSIANS. THE RESULTS WERE EFFECTIVE.

The inclement weather of January which confronted the Fifth and Eighth Armies made progress difficult, but apart from such natural obstacles the Garigliano River, swollen by heavy rains, proved a tough crib to crack by the Fifth Army. Yet three crossings were effected in face of severe enemy opposition, the Germans using well dug-in defence trenches and blockhouses on the slopes beyond the river. Yet the British troops on the extreme western flank established and maintained three bridgeheads, while reinforcements and supplies crossed the river and sappers were building new bridges. The enemy on this front has been placed in a very dangerous position with the new landings at Nettuno-Anzio. These, at Nettuno on January 22, caught the Germans napping, and there was practically no enemy resistance. The town of

IMMEDIATELY THE PRELIMINARY LANDINGS WERE MADE, METAL ROADWAYS WERE LAID DOWN BY SAPPERS, AND U.S. TROOPS ARE DRIVING TRUCKS OVER THEM.

THE LANDING AT ANZIO, TWO MILES BEYOND NETTUNO: BRITISH TROOPS FILING STEADILY FORWARD ALONG THE ANZIO-ROME HIGHWAY. (BY RADIO.)

Continued.]
Nettuno, like Anzio near by, favourite Roman summer resorts with hotels and villas, were left undamaged, although the enemy had made large demolition preparations. Day by day since, the first landings have been extended both north and east, with several fine roads leading to Rome, some 20 miles distant as we write, in fairly level country. Kesselring, however, instead of retreating from the Rapido-Garigliano front, staged his expensive counter-attack, incurring heavy losses. He appeared to believe that he could ignore the danger to his communications, and may attempt to bring additional divisions from the north, which will suit General Alexander, for his main object is obviously to cause the largest possible enemy detachment from the Northern European coming battlefield.

THE GREAT WORLD WAR:

FUTURE OF THE ITALIAN CAMPAIGN.

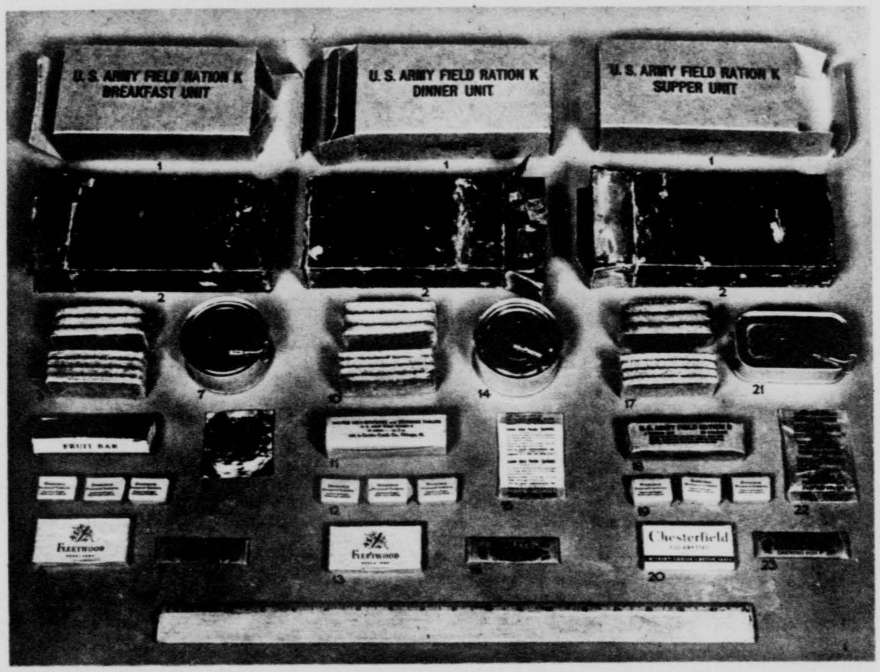
By CYRIL FALLS.

east of the Apennines had died down. On the Fifth Army front operations on a considerable scale were in progress. Their object was to force the enemy's Gustav Line on the Rapido and Garigliano rivers. Progress was rather faster than during the earlier assaults, but still involved the capture of one commanding feature after another. Photographs in these pages have contributed a great deal to the public's understanding of the nature of the country, but I do not think they bring out its full difficulties. The ascent of some of the bare, cliff-faced mountains which rise sheer out of the west-coast valleys would be difficult enough in winter if there were no fire to face. The enemy is generally invisible, and often almost immune from the covering fire with which the Allies strive to protect their advance. He even quarries the naked rock and puts his machine-gun posts into caves or narrow slits—the latter, indeed, lacking head-cover, but extremely difficult to hit. It appeared to me, none the less, that we should succeed in fighting our way into the Liri Valley, and that, when we did, progress would be more rapid with the coming of fine weather. It also seemed, however, that in this country there could never be a really swift advance without the aid of amphibian operations, of landings behind the enemy's flanks. And it was long since one of these had been carried out, to the disappointment of observers who had looked forward to repetitions of the brilliant landing at the mouth of the Biferno early last October.

The why and wherefore is not a matter for present discussion, but it can be said that the absence of a landing operation—except for one of a minor and local nature at the mouth of the Volturno—may have stilled some of the enemy's anxieties on that score, and influenced his dispositions to cope with such a step on our part. At all events, the element of surprise was achieved, whatever German propaganda may say on the subject; for Kesselring would never have allowed the Allied landing force to establish itself as it did if he could have prevented it. The heavy pressure on the main Fifth Army front must have contributed to this result. Either because he feared he could not hold the Gustav Line without reinforcements, or because he intended to launch a counterstroke for the purpose of recovering valuable ground already lost, he had moved down three divisions from the north, any or all of which might have been available to oppose our landing. Then we should have had to face the problem of Salerno over again, though we should doubtless have made use of the experience gained in that struggle. As it was, he was completely foxed. He had to withdraw troops from his Gustav Line to face the landing party, and, in fact, as I write, one of the three divisions just mentioned—the 29th Panzer Grenadier—has been identified in front of the beachhead between Rome and the Pontine Marshes. However great the air superiority of the side preparing an amphibian operation on this scale, concealment from the occasional reconnaissance aircraft flying at a great altitude is very difficult. Yet we won that important phase of the battle.

The actual landing was, in fact, almost entirely unopposed. Only small fragments of the enemy's forces were encountered. And, indeed, days passed without serious resistance having to be faced. The landing was on Saturday, January 22. It was not until the following Wednesday that the first strong counter-attack was launched, and even that does not seem to have been on a large scale. Air attacks naturally began sooner, but five days passed before they became really heavy. For a week, which represents the period I can consider in this article, they did nothing to check the landing of troops and supplies, though it is not to be supposed that Allied shipping escaped without loss. The landing-places were well within the range of Spitfires, and if the distance from their airfields was sufficient to limit the time which each individual aircraft could spend over the target, the great superiority in fighter-strength at the disposal of the Allies appears to have enabled this handicap to be overcome. The strategic bombing was all on the Allied side. Practically every vulnerable point on the German lines of communication was attacked. The bombers ranged as far as Istres, the important German airfield on the west shore of the Etang de Berre, near Marseilles. In all respects Allied air ascendancy was well maintained.

Nevertheless, the first comment of most observers on realising where the landing had taken place was that it was an exceedingly bold venture. At the nearest point the beachhead was between 40 and 50 miles from the Fifth Army's southern front, and it was evident that unless the enemy withdrew voluntarily from this front there was small prospect of an early junction between the two Allied forces. It did not seem likely that the Germans would thus pull out without a fight, and, in fact, their first action was to launch a series of sharp counter-attacks on the Rapido and the Garigliano. People wondered whether there existed a possibility that the enemy might be able to defeat the two forces in detail. On reflection they decided that the Fifth Army's southern front could not be in the smallest danger, but there was still a certain amount of anxiety for the landing force. As the days passed and each day brought a report of further forces and material pouring into the beachhead, this anxiety was allayed. It was decided that we had been given more time than we could have hoped for, and that if our calculations had been sound the situation must be secure. And then, I think, some astonishment arose. It was argued that the postponement of a decision could not be benefiting both sides equally; that one of them must obviously be profiting from it more than the other. Could one be certain that we were the gainers? Were we right in not pressing forward to gain possession of the Alban Hills beyond the Appian Way before the enemy's strength had been mustered?



Questions of this sort can be answered only by the future development of the operations. We certainly expected to be attacked sooner than we were, to judge by the statement of the Supreme Commander-in-Chief in the Mediterranean, General Wilson, to war correspondents. It remains to be seen whether the enemy held off as long as he did for lack of strength or because he hoped to strike a really decisive blow after he had had time to muster all his available forces. Before these lines are in print these things are likely to have been made clear, and it will also probably be known whether or not it was the intention of the Allies to remain in their beachhead and invite attack, counting on the strength of the tactical defensive which has developed in the last year or so, or whether the long pause, the almost complete inaction day after day, was rendered necessary in order to build up sufficient strength.

same pattern, it looks as though we might have to be content with a small footing for a long initial period. These are not criticisms of the operation, which I do not pretend to understand fully, but rather an attempt to set out the questions which are at present being generally asked. It is to be noted that the Germans have used the word "timidity" about the second phase of an operation which was very daring in its first phase. We shall all be glad to see that reproach refuted.

Meanwhile, it is evident that the landing south of Rome must profoundly affect our view of the Italian campaign and of its probable future. What has been done once can be done again. It looks, indeed, as though the campaign might develop almost exactly as most of us prophesied after the conquest of Sicily, except that, as usual, we were inclined to see the steps without the difficulties, and so expected quicker developments. At all events, it does now seem possible that the enemy may within a reasonable time be forced back to the Northern Apennines. If he reinforces the Italian theatre to such an extent as to compel us to halt, then some other theatre will benefit. It may be the Russian, or the Balkan, or the new theatre of campaign which the Allies are preparing to open. But he cannot starve the Italian theatre beyond a certain degree without suffering grievous consequences. The back doors to Germany may be very far ahead, and it may be that the Allies do not intend to wear out their strength in hammering at them if they should be strongly held; but it can be taken for granted that they have not been left out of account, and that if we are given the chance of a comparatively easy passage through them we shall take it. In other words, the Allied plan of campaign in Italy is likely for the future to be elastic and conditioned by developments in other theatres. I am more than ever convinced that if it is well managed it will amply justify itself.

The situation which has been reached is that the Allies now can see a considerable number of openings in front of them, and must decide which to take and which to neglect. To take too many would result in dispersion of effort, in a series of pinpricks which would not seriously hurt the enemy. On the other hand, in operations on exterior lines it is most useful to have alternative avenues of advance open in order to be able to switch the pressure at will from one point to another, and to keep the enemy's reserves well stretched. Already the Central Mediterranean Force in Italy and the army of General Tito in Yugoslavia play into each other's hands. Probably neither could maintain itself effectively if the other were to be liquidated. In the same way, these two theatres will interlock with the "second front" when the time comes for that to be initiated. And those most in favour of direct action must admit that action in the Mediterranean is now direct. Shipping from the New World can sail into its waters as conveniently and in not much longer time than it takes to reach British ports. The Mediterranean is no longer an extravagant base, as it was when Allied shipping had to go round the Cape of Good Hope and we were lucky if a third of the vessels in a convoy to Malta reached their destination.

To realise its present importance one has only to imagine that the Mediterranean theatre did not exist, and that the Allies were none the less contemplating invasion of Europe from the west. In that case, practically all the German forces not engaged in Russia would be standing waiting for us in the Low Countries and in France, or in reserve in Western Germany. We should be bearding in his den a lion poised to spring. Unperturbed about the whole southern coast of Europe on the Mediterranean, the Germans would be in a very strong position. As it is, the extra front in Italy is serving us well and the threat of still more Mediterranean fronts must ever embarrass the enemy's High Command. We may thank our lucky stars that the counter-offensive of late 1942 opened in the Mediterranean, and that the successes gained in it have been exploited as they have been.

AMERICA'S 24-HOUR RATION FOR INVASION TROOPS—CONTENTS OF THE FAMOUS "K" RATION.

1. CONTAINER; 2. INNER CONTAINER (WAXED); 3. BISCUITS; 4. FRUIT BAR; 5. SUGAR; 6. CIGARETTES, 7. CORNED PORK AND EGG YOLKS (3¾ OZS.); 8. COFFEE PRODUCT; 9. CHEWING-GUM; 10. BISCUITS; 11. MALTED MILK—DEXTROSE TABLETS; 12. SUGAR; 13. CIGARETTES; 14. PROCESSED CHEESE AND BACON (4 OZS.); 15. LEMON-JUICE POWDER; 16. CHEWING-GUM; 17. BISCUITS; 18. CHOCOLATE, SUGAR, MILK POWDER (2 OZS.); 19. SUGAR; 20. CIGARETTES; 21. CORNED PORK LOAF WITH CARROTS AND APPLE FLAKES (3½ OZS.); 22. BOUILLON POWDER (HOT OR COLD SOUP); 23. CHEWING-GUM. (THE COMPARATIVE INCH RULER AT THE FOOT OF THE PICTURE IS 18 INCHES LONG.)

In last week's "Illustrated London News" we published a picture showing the contents of the 24-hour ration pack to be issued to British troops taking part in the Second Front invasion of Europe. This week we illustrate its United States equivalent—the famous "K" ration of the U.S. Army, which has been in use in the Mediterranean and Pacific zones of war.

THE ROADS TO ROME: A CONTOUR MAP SHOWING ALL COMMUNICATIONS.

THE MANY CLASSIC AND MODERN ROADS OPEN TO THE FIFTH ARMY ON ITS MARCH TO ROME.

This contour map presents a very adequate idea of the old saying that "All roads lead to Rome," and should prove a useful reference in the immediate future as that part of the Fifth Army based on Anzio-Nettuno (seen at the foot) advances on Rome herself, 33 miles to the north. The importance of communications needs no stressing. On January 28 the Allies held a junction of four roads three miles north-west of Littoria and ten miles east of Nettuno. On the 30th they had taken Carroceto, half-way between Anzio and the Alban Hills. It has been freely stated that Kesselring will seek to stem the Allied advance in the volcanic Alban Hills, shown clearly in our map, lying about 13 miles south-east of Rome, rising to 3115 ft., to which three historic roads lead from the capital, including the Via Appia, built as a military road in 312 B.C., which runs right through from Rome to Capua. But there are other roads. One is the Via Ardeatina, which becomes the Via Anziate to Anzio and only skirts the western flank of the Alban Hills. There is the Via Laurentina, reached, from the coastal road, *via* Severiana from Anzio, and the latter again proceeds along the coast to Padiglione, where a branch goes direct to the capital. These and others traverse undulating or flat soil and all are accessible to the Fifth Army.

(Map reproduced from "The Roman Campagna in Classical Times," by Thomas Ashby; published by Ernest Benn, Ltd.)

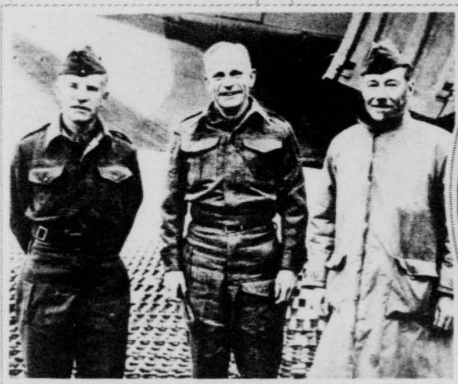
VICE-ADMIRAL PERCY W. NELLES.
Admiral Nelles, Chief of the Canadian Naval Staff, has been appointed Senior Canadian Flag Officer in London. He will have general supervision of the Canadian Navy overseas. This is another appointment in the long list of those announced in connection with any invasion to be launched on Europe.

THE YOUNGEST KING IN EUROPE: KING SIMEON II. OF BULGARIA (CENTRE) ON THE WAY TO VISIT HIS FATHER'S GRAVE.
The son of the late King Boris of Bulgaria, King Simeon II., recently visited his father's grave for the first time. He is shown here holding the hand of the Queen Mother, Johanna, with his sister, Princess Maria-Luise, walking on his left. Behind the Queen-Mother is Prince Cyril, brother of the late King. King Boris died on August 28 of last year, and on account of the youth of the boy King, a Council of Regency was formed consisting of Prince Cyril, the Prime Minister, Filov, and the War Minister, Michov.

FLIGHT LIEUT. F. G. H. CHALK, D.F.C.
Flight Lieut. Chalk, who was captain of Kent in the last two cricket seasons before the war, and who has been missing since February of last year, is now officially presumed killed. He was thirty-two. He captained Oxford University in 1934, when he played a brilliant innings of 108 at Lord's against Cambridge.

GENERAL SIR GEORGE GIFFARD.
To be Commander-in-Chief, Army Group in South-East Asia, General Sir George Giffard is fifty-seven. He has been in command in West Africa since 1940, and, in fact, more than thirty years of his military career has been spent in Africa. When war broke out he was Military Secretary at the War Office.

LIEUT.-GENERAL IRA C. EAKER (SECOND FROM LEFT), THE NEWLY-APPOINTED A.O.C.-IN-C., MEDITERRANEAN ALLIED AIR FORCES, ARRIVES IN NORTH AFRICA.
The new Air Officer Commanding-in-Chief, Mediterranean Allied Air Forces, Lieut.-General Ira Eaker, arrived in North Africa recently. With him in this photograph are (left to right) Lieut.-General J. A. Gammell, Chief of Staff to General Sir Henry Maitland-Wilson; the A.O.C.-in-C. himself; Air Chief-Marshal Sir Arthur Tedder; Air Marshal Sir John Slessor, K.C.B., D.S.O., M.C., the new Deputy A.O.C.-in-C., and Air Vice-Marshal Sir J. M. Robb, C.B., D.S.O., D.F.C., A.F.C.



GENERAL JUIN.
Formerly Military Commander of the Algerian district, General Juin is in command of the French forces which have been fighting with such marked success against the Germans in the Monte Croce area. General Juin signed the armistice terms with General Eisenhower in 1942 after the capitulation of Algeria.

LIEUT.-GENERAL W. J. SLIM.
To be Commander, 14th Army, Lieut.-General Slim is fifty-two, and his regimental service was with the 6th Gurkha Rifles. He was a Brigade Commander of the 5th Indian Division in the advance into Eritrea, where he was wounded. He took part in the fighting retreat from Burma as a Corps Commander.

MISS ELLEN WILKINSON.
Miss Wilkinson, Labour M.P. for Jarrow, has been elected chairman of the National Executive of the Labour Party in succession to the late Mr. George Ridley. Miss Wilkinson is Parliamentary Secretary to the Ministry of Home Security, Mr. Herbert Morrison. She will preside over the next party conference at Whitsuntide.

LIEUT.-GENERAL R. O'CONNOR, AIR MARSHAL O. T. BOYD, AND LIEUT.-GENERAL P. NEAME, V.C. (L. TO R.), ESCAPE FROM ITALY.
The three senior officers whose portraits appear above, who were prisoners of war in Italy, have escaped and are now safely back in England. General O'Connor and General Neame were captured near Derna in April 1941, and Air Marshal Boyd was reported missing after a flight in November 1940 to take up his appointment as Deputy to the A.O.C.-in-C., Middle East, and was then succeeded by Air Chief-Marshal Tedder.

LORD MOYNE.
Lord Moyne has been appointed Minister Resident in the Middle East in succession to Mr. Casey, whom he was appointed to assist in Cairo as Deputy Minister of State in August 1942. In 1941 he was Secretary of State for the Colonies and Leader of the House of Lords for about a year

AIR MARSHAL SIR A. CONINGHAM (LEFT), A.O.C. NO. 2 TACTICAL AIR FORCE, WITH MAJOR-GENERAL J. K. CANNON, U.S.A.A.F.
Air Marshal Sir Arthur Coningham has been appointed Air Officer Commanding No. 2 Tactical Air Force of the R.A.F. based in Great Britain, and has assumed his new command. He was previously in command of No. 1 Tactical Air Force in the Mediterranean Air Command and is shown in our photograph with his successor to that job, Major-General J. K. Cannon, a General Officer of the U.S.A.A.F.

EVERY AVAILABLE INCH IS CRAMMED TIGHT WITH MEN AND STORES AS THIS L.S.T. (LANDING-SHIP TANK) HEADS FOR ACTION AT CAPE GLOUCESTER, NEW BRITAIN.

Not a single thing seems to have been left behind by the force of U.S. Marines heading for a landing at Cape Gloucester, if one can judge by the miscellaneous collection of stores crammed into every available inch on the deck of the L.S.T. shown above. It is absolutely remarkable the amount of supplies these vessels can carry, in addition to some of the troops who are going to use it and the crew.

This particular photograph was taken prior to the attack on Cape Gloucester, New Britain, where American forces captured the twin air-strips, providing United States aircraft with an additional base from which to continue pounding the Japanese positions at Rabaul. Different types of landing and assault craft, as used by the Allies, are illustrated on pages 154 and 155.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THE WAR AMPHIBIOUS: LATEST TYPES OF INVASION CRAFT FROM A M

FROM THE PAINTING BY OUR SPECIAL ARTIST, C. E. TURNER

LANDING-CRAFT PROBABLY IN SERVICE IN ITALY AND ELSEWHERE, SHOWING ANCHORED LANDING-SHIPS, FLAK CRAFT, F

This war, amphibious so far as the Allied Powers are concerned, has led necessarily to a tremendous development in various forms of landing and assault craft with the object of the quick and efficient passage of men and material to any specified landing-place. Our special artist has in his painting illustrated types of invasion landing craft as probably employed for the purpose in the various landings in Italy, and includes some of the largest and most modern vessels of this type flying the White Ensign of the Royal Navy. The lettering on the bows of craft is to identify each type of vessel shown. In the background, left, are L.S.I. (M), Landing Ships, anchored, from which are being lowered assault craft from large davits or cranes. Other assault craft, including Amphibious Ducks, from the landing ships, are moving in lines shoreward. At mid-left is an L.C.F., a major Landing Craft (Flak), armed with A.-A. artillery. Note the great length of this ground, left, is L.C.I., th directly on the beach by In right background is L is the L.C.S. (L), Supp available. Below her is

…ION CRAFT FROM A MAJOR TANK-LANDING SHIP TO AMPHIBIOUS DUCKS.

FROM THE PAINTING BY OUR SPECIAL ARTIST, C. E. TURNER.

…HORED LANDING-SHIPS, FLAK CRAFT, FORMIDABLY ARMED SUPPORT CRAFT, TANK-CARRYING AND INFANTRY ASSAULT CRAFT.

…e Royal Navy. The lettering on …essel shown. In the background, … which are being lowered assault …ult craft, including Amphibious …n lines shoreward. At mid-left …rmed with A.-A. artillery. Note the great length of this type, of which no details are yet released. In foreground, left, is L.C.I., the latest type of Infantry Landing Craft. Troops land directly on the beach by the inclined bows carried forward to port and starboard. In right background is L.S.T., the major Tank-Landing Ship, and ahead of her is the L.C.S. (L), Support Craft, formidably armed, of which no details are available. Below her is an U.S. Tank-Landing Craft of novel design. The upright vents in pairs give this type of vessel a distinctive appearance. Below her, mid-right, is L.C.T., a large Landing Craft carrying tanks, guns, vehicles, and other heavy equipment; while centre-bottom is a close-up of the L.C.A., Landing Assault Craft, shown distantly in the left background as mentioned. At right-bottom is an Amphibious Duck, equally at home afloat or on land, which has proved extremely serviceable in Italy and in the Pacific.

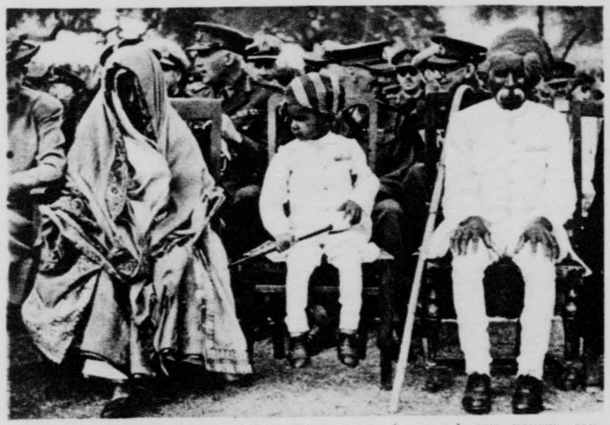
PILL - BOXES USED BY THE GERMAN ARMY.

REFERENCE to the use by the Germans of mobile defence posts in Italy was made in a message from Frank Gillard, B.B.C. commentator with the Fifth Army, mentioned in the nine o'clock news on the night of January 26. Speaking of the fighting near the coast, Mr. Gillard said that Allied patrols which had penetrated German defences in the Liri Valley had found fortifications of immense strength, but in addition to the usual fixed pill-boxes, blockhouses and the like, there were two kinds of an unusual type. The first was a mobile defence post, mainly of steel, mounted on wheels and easily moved about. It was just of the size to hold two men and a machine-gun. The second was a steel bunker, partly buried in the earth and immensely strong, with 2-in.-thick armour-plate protection, and able to hold six to ten men. Although no pictures of these posts have (at the time of going to press) been received from Italy, it is possible that they are of the type illustrated here, these photographs having been taken at a Moscow exhibition of captured German equipment last year. Frank Gillard's descriptions certainly seem to tally with the style of the two versions seen here.

(ABOVE.) A GERMAN MOBILE ARMOURED MACHINE-GUN POST READY FOR ACTION. IT WAS CAPTURED BY THE RUSSIANS AND (WITH THE ONE SEEN LEFT) EXHIBITED IN MOSCOW LAST YEAR. THESE MOBILE DEFENCE POSTS MAY BE THE TYPE NOW IN USE ON THE ITALIAN FRONT.

(LEFT.) ANOTHER, AND APPARENTLY LIGHTER, TYPE OF GERMAN ARMOURED MACHINE-GUN POST. THIS ONE IS MOUNTED ON A CARRIAGE WITH WHEELS, AND ITS TOWING-BAR CAN BE CLEARLY SEEN PROTRUDING FROM THE LOWER PART OF THE BODY

THIS PAGE IS DECLASSIFIED IAW EO 13526



A MEMORIAL CHURCH ERECTED IN THE FIRST COUNTRY TO BE LIBERATED: THE CHURCH OF THE HOLY TRINITY, ADDIS ABABA, ABYSSINIA.

This new Church of the Holy Trinity has been recently dedicated as a National Shrine for the Imperial Family and for the patriots who fought in the liberation of Ethiopia. A tablet was dedicated by his Imperial Majesty Haile Selassie to the memory of the British officers and men who gave their lives in the campaign, and the coffin of the late Princess Tsahai, who trained as a nurse whilst in exile in Britain and died on returning to Abyssinia, has been transferred to the new Church.

BRITISH ARMOUR SHOWS ITS PACES AT A SOUTHERN COMMAND DEMONSTRATION, WHEN AN ARMY TANK BRIGADE PARADED AT FULL STRENGTH IN "LEAGER" OR TRIANGULAR FORMATION. CHURCHILL TANKS WAITING FOR THE WORD OF COMMAND WHICH WILL SEND THEM FORWARD IN THEIR TURN.

AFTER THE POSTHUMOUS PRESENTATION OF A V.C.: (L. TO R.) THE WIDOW, SON AND FATHER OF THE LATE COMPANY HAVILDAR-MAJOR CHHELU RAM, V.C.

Company Havildar-Major Chhelu Ram, of the 6th Rajputana Rifles, won the V.C. for acts of great courage during an attack by the 5th Indian Infantry Brigade on the Jebel Garci feature in Tunisia in April 1943. He was mortally wounded whilst going to the assistance of his Company Commander under intense fire. Lord Wavell, the Viceroy, presented the V.C. to Chhelu Ram's widow at Red Fort, Delhi, on January 5 of this year.

GAJE GHALE, HERO OF THE CHIN HILLS, BURMA, BATTLE, IS AWARDED HIS V.C.: THE VICEROY MADE THE PRESENTATION. GHALE BEING CONGRATULATED.

Another V.C. to be presented at Red Fort, Delhi, on January 5 of this year was that of Gaje Ghale, of the 5th Royal Gurkha Rifles, who won his award for leading a daring and successful attack against almost insuperable odds while severely wounded. He was hit in the arm, chest and leg by a hand-grenade, but he continued to lead his men without pause, and they carried the ridge in fierce hand-to-hand fighting. The action, against a well-entrenched Japanese key position, Basha East Hill, in the Chin Hills, Burma, took place on May 25, 1943.

DRIVING BACKWARDS AT HIGH SPEED: A DAIMLER ARMOURED CAR, CARRYING A 2-POUNDER GUN, REVERSES OVER ROUGH COUNTRY.

Two Daimler fighting vehicles, recently removed from the secret list, are a scout car which can pass from going forward at 60 m.p.h. to reversing at 40 m.p.h. The other is an armoured car (shown above) mounting a 2-pounder gun in a rotating turret, which also travels backwards at high speed. This model is fitted with an additional steering-wheel and controls at the rear to enable the commander to take control when a journey backwards becomes necessary. Although both vehicles perform so well in reverse, they are without the normal reverse gear. Instead, there is a reversing lever, which enables the 5-speed gearbox to be used in travelling in both directions. Transmission is by fluid fly-wheel.

A NEW UNITED STATES VEHICLE NOW IN ACTION: THE U.S. ARMY'S M-8, A LIGHT TANK MOUNTING A 75-MM. HOWITZER.

The U.S. Army's M-8 military vehicle, a light tank mounting a 75-mm. howitzer and a ·5-calibre anti-aircraft machine-gun, is now in action. Army officials have disclosed that the M-8 is being used to form a combat team with American M-5 tanks, lobbing its mortar shells into concealed enemy positions that cannot be reached by the low-trajectory shells fired by the M-5 tanks. This actual photograph was taken during a demonstration of the M-8's combat technique.

"SAN DEMETRIO, LONDON": AN EPIC OF BRITISH SEAMEN'S HEROISM.

A NOTABLE FILM BASED ON A TRUE SEA DRAMA. FOR TWO NIGHTS AND DAYS, SEAMEN OF A BLAZING TANKER DRIFT AIMLESSLY IN AN OPEN BOAT IN THE ATLANTIC.

THE MEN RE-BOARD THE BLAZING TANKER'S WHITE-HOT DECKS. THEY HAD SIGHTED HER ON THE EVENING OF THEIR SECOND DAY ADRIFT IN A LIFEBOAT.

THE CHIEF ENGINEER AND SECOND OFFICER OF THE "SAN DEMETRIO" DISCOVER THAT ALL THE INSTRUMENTS ARE WRECKED. THEY HAVE ONLY A SCHOOL ATLAS AVAILABLE.

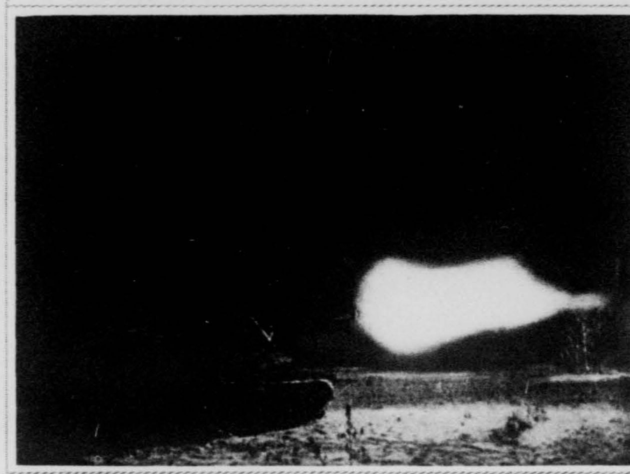
ALTHOUGH FLAMES THREATEN TO EXPLODE THE TANKER'S 12,000 TONS OF OIL, THE CREW FIGHT THE FIRES WITH BUCKETS OF WATER.

ENGINES AND STEERING-GEAR ARE OUT OF ACTION, AND THE CREW FIND THEMSELVES AT THE MERCY OF AN ATLANTIC STORM.

BUT THEY SAIL HER HOME TO BRITAIN, SAVING 11,000 OF HER 12,000 TONS OF OIL. THE MEN WATCH FROM THE SIDE AS THE "SAN DEMETRIO" LIMPS INTO PORT.

Very few films of recent years have had such an unanimously enthusiastic reception from the critics as "San Demetrio, London." Produced by Michael Balcon at the Ealing Studios, the film is as British as the epic of sea-going heroism it records. This is no affair of box-office stars and background music: it is a film of grim, undemonstrative heroism, the true story of a small band of merchant seamen who, having been forced to abandon their blazing tanker in mid-Atlantic, drifted aimlessly in a lifeboat for two nights and two days. It was on the evening of the second day that they sighted a burning ship and, drawing closer, realised that it was their own "San Demetrio." Without hesitation, they re-boarded her white-hot decks, fought to a standstill the flames which threatened to blow them sky-high at any moment, and sailed the tanker home in spite of the fact that her bridge, charts, wireless, signal flags, compass and steering-gear had all gone. Guided by guesswork and by Providence—and a school atlas!—they brought the crippled ship home, having saved 11,000 of her 12,000 tons of vital oil. The film which tells the story of their superb achievement, "San Demetrio, London," is now showing at the Regal Cinema, Marble Arch, before distribution to the provinces.

ON THE SECOND UKRAINIAN FRONT: INFANTRYMEN OF THE RED ARMY GO IN TO THE ATTACK WITH TANK SUPPORT.



ON THE FIRST UKRAINIAN FRONT: JUNIOR LIEUT. P. MERENKOV (RIGHT) LEADING A GROUP OF AUTOMATIC RIFLEMEN ON A RECONNAISSANCE SORTIE.

NIGHT OPERATIONS ON THE FIRST UKRAINIAN FRONT: A SOVIET TANK FIRING ON ENEMY POSITIONS. THE RED ARMY'S ADVANCE HAS BEEN SPECTACULAR.

A SOVIET LIAISON OFFICER, STANDING BEHIND THE LIGHT GUN MOUNTED ON AN ARMOURED CAR, DRIVES TO DELIVER A MESSAGE.

Almost every day brings news of fresh Red Army successes on one of their many fronts from Leningrad down to the Black Sea, but of late the most important victories have been in the north, where the latest communiqué available tells of General Govorov's troops within about 16 miles of the Estonian border, the most northerly of the Baltic States. Three Russian drives are reported to be closing in on the town of Kingisepp, where the Germans are struggling bitterly to cling on to their last positions on the main railway into the city, but, judging by the tactics employed by General Govorov, the enemy will find it as impossible to hold this town as he did Novo Sokolniki, north of Nevel, whose fall to General Markian Popov, considered one of the most daring

THEY MARCH THROUGH LENINGRAD, BUT AS PRISONERS, NOT CONQUERORS: GERMAN SOLDIERS, LED BY A RED ARMY TOMMY-GUNNER, FILING THROUGH LIBERATED LENINGRAD.

A GERMAN SIEGE-GUN CAPTURED AT LENINGRAD: SOVIET ARTILLERYMEN INSPECT THE WEAPON WHICH, WITH OTHERS SIMILAR, FOR SO LONG, BOMBARDED THE CITY.

SOVIET SELF-PROPELLED GUNS AND TANKS, WITH TANK-BORNE INFANTRY, MOVE UP TO FORWARD POSITIONS ON THE FIRST UKRAINIAN FRONT.

of the Red Army's commanders, was announced on January 30. In the Ukraine, the battles show no sign of abatement. The Russians have announced a tactical withdrawal from certain positions under heavy German pressure, but in consolidating their lines more favourably for defence in the region east of Vinnitsa and north of Kristinovka, our Allies inflicted severe punishment on the enemy.

Meanwhile, Berlin reports more big Russian attacks on the southern front, with seventeen infantry divisions and four armoured corps attacking, in the Dnieper bend area south-west of Cherkassy. Our photographs, all by radio, are mainly of the fighting on the First and Second Ukrainian fronts, but show also the utter ruin of the famous Imperial Palace at Peterhof, formerly a palace of the Tsar.

DETSKOYE SELO (PUSHKIN), RECAPTURED BY THE RED ARMY: THE MAIN FAÇADE AND COURT OF HONOUR OF THE FAMOUS CATHERINE PALACE.

THE LARGE THRONE HALL IN THE CATHERINE PALACE AT DETSKOYE SELO: IT OCCUPIES TWO FLOORS AND THE FULL BREADTH OF THE PALACE.

The Catherine Palace at Detskoye Selo—formerly Tsarskoye Selo—was designed by Count Carlo Rastrelli (1700-1771), the architect who created most of the fine Baroque palaces of Imperial Russia. The palace remained a residence of the Czars to the very end of the regime, and the Soviet Government restored the full original splendour of the multi-coloured decoration of the façade. Now it, and other Imperial residences in the Pushkin district, are badly damaged, if not utterly ruined, under German occupation.

LYDFORD GORGE, BETWEEN TAVISTOCK AND OKEHAMPTON, DEVON, FOR THE NATION: IT HAS BEEN PRESENTED TO THE NATIONAL TRUST BY MR. H. T. RADFORD.

The National Trust announces the gift by Mr. H. T. Radford of the beautiful Lydford Gorge, which extends for nearly two miles, to about half-way between Tavistock and Okehampton. Before the war many thousands of tourists visited this gorge, through which a path was cut, and which was maintained by the Radford family for the benefit of visitors. The whole stretch is exceedingly picturesque and varied, and runs from near a railway viaduct to above a fine waterfall, where the river finally emerges.

ON EXHIBITION AT THE NATIONAL GALLERY: "APOLLO AND DAPHNE"; BY POLLAIUOLO (1432-1498). PANEL, 11¾-IN. HIGH BY 7¾-IN. WIDE.

ON EXHIBITION AT THE NATIONAL GALLERY: "THE MADONNA OF THE BASKET"; BY CORREGGIO (1494-1534). PANEL, 13½-IN. HIGH BY 10-IN. WIDE.

The above two pictures, with a third, "Vision of a Knight," by Raphael, are on exhibition at the National Gallery until Tuesday, March 7. All three are fine examples of the Italian school of painting of the fifteenth and early sixteenth centuries. Pollaiuolo (Florentine School), was an anatomist, goldsmith, and sculptor as well as a painter. Correggio (School of Parma) painted his greatest pictures between 1518 and 1530.

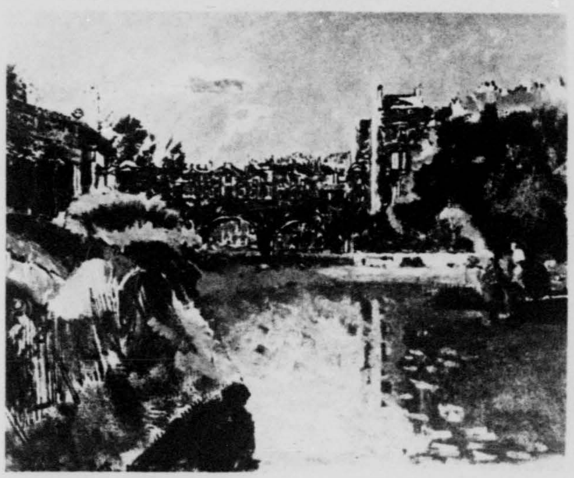
PICTURES FROM THE COLLECTION OF SIR MICHAEL SADLER ON EXHIBITION.

"BERGHOLT COMMON"; BY J. CONSTABLE, R.A. (1776-1837).

"LANDSCAPE WITH CHURCH"; BY T. GAINSBOROUGH, R.A. (1727-1788).

"SANTA MARIA DELLA SALUTE, VENICE"; BY W. R. SICKERT (1860-1942).



"PEASANT WITH SHEAF"; BY J. F. MILLET (1814-1874).

"BATHERS"; BY AUGUSTUS JOHN, O.M., R.A.

A SELECTION of paintings and drawings, with a few pieces of sculpture from the collection of the late Sir Michael Sadler, is on view at the Leicester Galleries, Leicester Square. Although there are certain pictures by old masters in the exhibition, particularly a most attractive Gainsborough, "Landscape with Church," painted in little more than brown monochrome, the aim, generally speaking, has been to show Sadler as a collector of

[Continued below.

"PULTENEY BRIDGE, BATH, 1918"; BY W. R. SICKERT (1860-1942).

"RUINS IN A LANDSCAPE"; BY J. B. C. COROT (1796-1875).

Continued.]

comparatively recent or modern pictures by English and French artists. It is the English pictures which are the more numerous, although the French are well represented by such artists as Segonzac, Ronault, Cézanne, Picasso, Renoir, Serusier, and others. Altogether, the exhibition is a well-planned tribute to a collector of fine judgment who did notable service as a patron of young artists. He would seek out young painters and give them every encouragement; he practically never made a mistake, and the good that he did to painting is incalculable. And no patron was less speculative about pictures than he. Yet he backed winners nearly every time.

THIS PAGE IS DECLASSIFIED IAW EO 13526

"A MAN WITH A TURBAN"; BY ROGER VAN DER WEYDEN (FLEMISH SCHOOL, 1400?-1464). PAINTED ABOUT 1450-1460.

DIONYSIUS THE CARTHUSIAN (?); BY PETRUS CHRISTUS (FLEMISH SCHOOL, 1410?-1473). INSCRIBED "PETRUS. XRI. ME. FECIT. A° 1446."

"A PORTRAIT OF A YOUNG MAN"; BY GIOVANNI BELLINI (VENETIAN SCHOOL, 1428?-1516).

GIULIANO DE MEDICI, DUKE OF NEMOURS; BY RAPHAEL (UMBRIAN SCHOOL, 1483-1520). SIGNED, AND DATED 1514 OR 1515.

FRANCESCO SASSETTI AND HIS SON TEODORO; BY DOMENICO GHIRLANDAJO (FLORENTINE SCHOOL, 1449-1494).

CLAES DUYST VAN VOORHOUT; BY FRANS HALS (DUTCH SCHOOL, 1580-1666).

"A YOUNG MAN WITH A BLACK CAP"; BY REMBRANDT (DUTCH SCHOOL, 1606-1669). SIGNED, AND DATED 1659.

THE INFANTA MARIA THERESA; BY VELASQUEZ (SPANISH SCHOOL, 1599-1660).

CHRIST WITH A PILGRIM'S STAFF; BY REMBRANDT (DUTCH SCHOOL, 1606-1669). SIGNED, AND DATED 1661.

The Bache Collection, one of the most famous private collections of paintings and other works of art in the world, is to be given to the Metropolitan Museum of Art, New York, as soon as the museum can arrange to display it fittingly. The gift is to be made by the trustees of the Bache Foundation at the suggestion of Mr. J. S. Bache, who formed the collection. Among the sixty-three paintings, eighteen of which are reproduced on these pages, are many superb examples of classical art, notably Raphael's "Giuliano de Medici" and Titian's "Venus and Adonis"; Botticelli's "Coronation of the Virgin," Cosimo Tura's

"A PORTRAIT OF A MAN"; BY HANS HOLBEIN THE YOUNGER (GERMAN SCHOOL, 1497-1543). DATED 1535.

DIRK BERCK OF COLOGNE; BY HANS HOLBEIN THE YOUNGER (GERMAN SCHOOL, 1497-1543). DATED 1536.

EDWARD VI. WHEN PRINCE OF WALES; BY HANS HOLBEIN THE YOUNGER (GERMAN SCHOOL, 1497-1543).

"A LADY OF THE COURT OF HENRY VIII."; BY HANS HOLBEIN THE YOUNGER (GERMAN SCHOOL, 1497-1543).

WILLIAM SCOTT-ELLIOT OF ARKLETON; BY SIR HENRY RAEBURN, R.A. (SCOTTISH SCHOOL, 1756-1823). PAINTED IN 1815 OR 1816.

LADY MULGRAVE; BY THOMAS GAINSBOROUGH, R.A. (ENGLISH SCHOOL, 1727-1788).

"A PORTRAIT OF A LADY": BY ALBRECHT DÜRER (GERMAN SCHOOL, 1471-1528). SIGNED, AND DATED 1506.

"THE HEAD OF A YOUNG BOY"; BY JAN VERMEER (DUTCH SCHOOL, 1632-1675).

"A PROFILE PORTRAIT OF A GIRL"; BY DOMENICO VENEZIANO (FLORENTINE SCHOOL, ACTIVE 1439-1461).

"Flight Into Egypt," Rembrandt's "Christ With a Pilgrim's Staff," Velasquez's "Portrait of the Infanta Maria Theresa," and Memling's "Lady of Quality." There are also many outstanding Holbeins, such as "Edward VI. when Prince of Wales" and "A Portrait of a Man"; Van Dyck's self-portrait; Goya's "The Little Boy in the Red Suit" and "Manuel Osario"; David's "Nativity"; Fragonard's "Le Billet Doux"; and very fine examples of the work of Bellini, Vermeer, Watteau, Gainsborough and Reynolds. This wonderful collection, assembled over a quarter of a century, is valued at many millions of dollars.

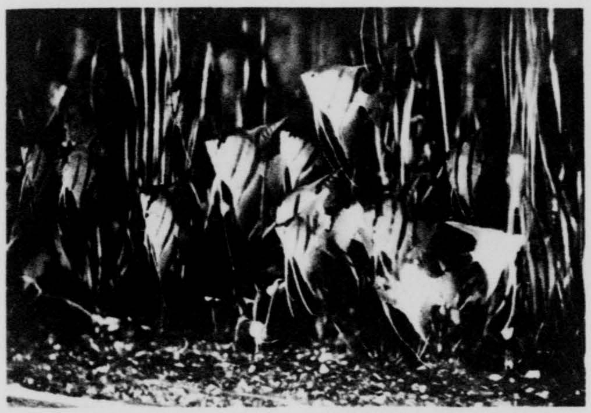
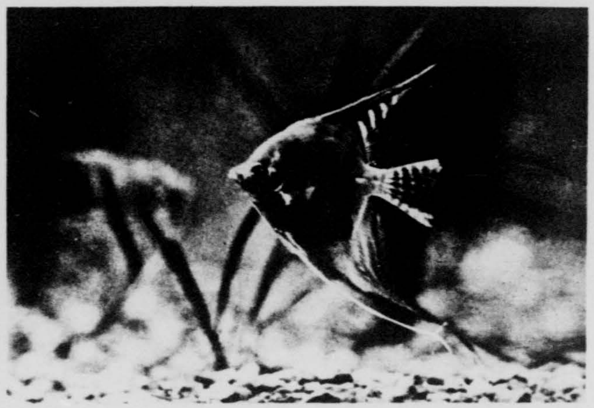
PROBLEMS OF THE AQUARIUM.



By E. S. GREW.

IN wartime the Aquarium at the Zoo has to adapt itself to an austerity basis. It is short of water, short of fish, rationed in food and, in consequence, shorn of some of its stranger inhabitants. The sea-water, which was brought from the Bay of Biscay, has been drawn off, the octopus paid off, and with it have gone some of the less repulsive marine monsters, as well as the lobsters, of which the octopus was ready to make a meal. The manatee, the fabled mermaid, more properly known as the sea-cow, will not be seen again, though he or she was a vegetarian and made no extravagant demands on the food supply; nor will another sea-lion yet replace the notorious Roary, who would clear up the remaining population of a tank. All such have been compulsorily liquidated, and with them have gone the starfish and other favourites, some of whom, like the lobsters, will resume their private feuds no doubt when peace permits. The lobsters, it may be mentioned, reserved their gladiatorial displays till nightfall; and the defeated, minus a claw or so, have to be removed to hospital tanks, till their severed members grow again.



Yet most of the necessary provisions for the survivors remain. The first of them is that of clean water, as vital to the Aquarium fish as clean milk to human beings. The construction of the Zoo Aquarium is now a twenty-years-old story; but its way of supplying fresh water to the tanks may be told again. To attain the needful purification, the water is pumped from an underground reservoir of 60,000 gallons to other smaller reservoirs among the peaks of the Mappin Terrace. From there it falls through pipes into the show-tanks, the overflow passing through a series of elaborate sand-filters before returning to the underground reservoir. Thus a circulatory system of clean water is maintained. The oxygenation of the water is variously contrived, one way being that of pumping compressed air into the aquaria. Ordinarily the fresh-water Hall has twenty-five tanks, varying from small ones to the big 30-footer holding 5000 gallons. Another set of tanks is reserved for tropical fresh-water fish, but these, fewer now, are in the Reptile House.

A SHOAL OF PERCH, THE HANDSOMEST OF ALL BRITISH FRESH-WATER FISHES, BUT A TRUE COSMOPOLITAN, BEING FOUND IN NEARLY ALL THE RIVERS OF EUROPE AND NORTH-EASTERN ASIA.

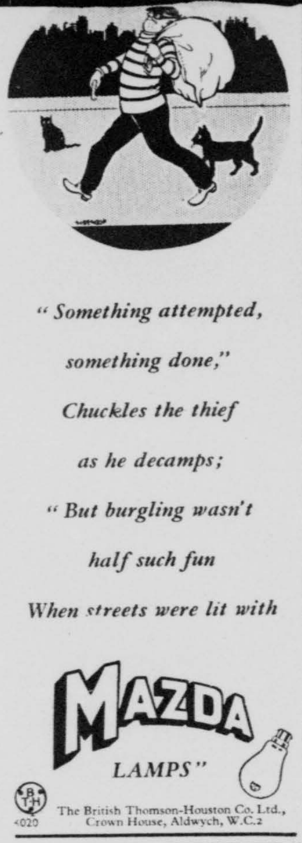
THE DISAPPEARING TRICK OF THE ANGEL-FISH, WHICH, CAMOUFLAGING THE DARK STRIPES ON THEIR BODIES, CAN HIDE AMONG THE WEEDS. THEY THUS MAKE THEMSELVES ALMOST INVISIBLE TO THE AQUARIUM VISITORS.

THE ANGEL-FISH FROM THE AMAZON: IT IS ABOUT 8 IN. LONG, DEEP-BODIED, AND WITH VERY LARGE FINS DRAWN OUT INTO LONG FILAMENTS. THE EGGS ARE LAID ON THE LEAVES OF PLANTS AND BOTH PARENTS WATCH OVER THEM.

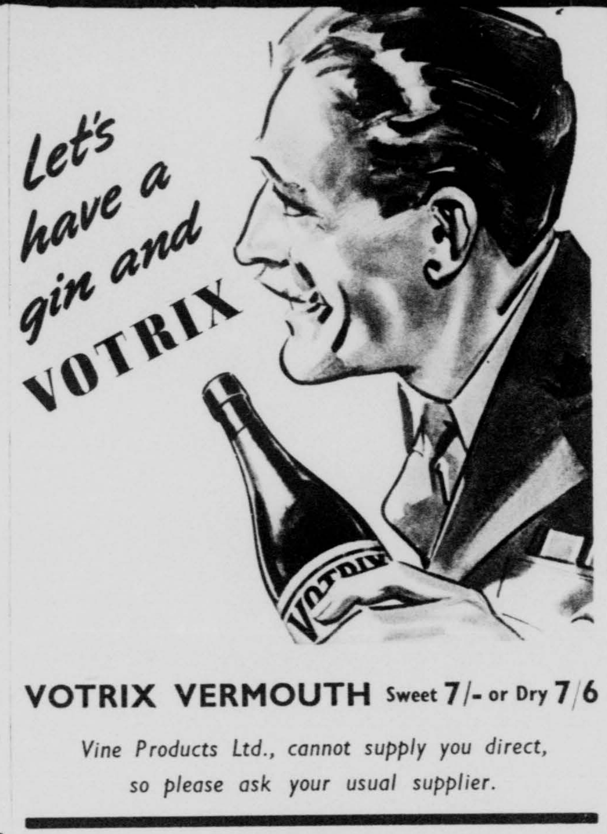
Austerity extends to the food supply. From the Zoo's comprehensive bill of fare for all its inmates, always a major problem, oranges, bananas and shell-eggs are now excluded and the milk cut down. Such rationing leaves the fish unaffected, yet they feel the impact of the war in a modified way, for the shortage of shrimps is felt, and the finely shredded bullock's heart, a staple article of food of many has now been replaced by horse's heart. That is really no hardship, for the Zoo, as a whole, has long been fed on horseflesh. When the establishment is in full swing 700 horses and goats are requisitioned to supply certain of the larger mammals. Apart from the sea-lions, which in the piping times of peace disposed of 50 tons of fish a year, the Aquarium's fishes are small eaters. Only the pike demand a fish diet of the minnows, which, all unsuspecting of their doom, play about the surface of the tank. Meal-worms, sand-hoppers, fresh-water shrimps and the fresh-water flea suffice for most; and vegetable feeders, like the carp and tench, will never starve if their tank is kept well stocked with plants.

As important as the need for careful feeding, implying that the food best suited to the fish has to be ascertained, the tanks must be kept scrupulously clean. Most of them are carpeted with sand, on which refuse shows up and can be picked up by a suction broom, and the walls and windows regularly wiped. The best temperature of the water must be found and kept constant. Except for the tropical and sub-tropical inmates, the average water temperature should be between 45 and 55 degrees, and in summer should not exceed 65 degrees. Tropical fresh-water fish thrive in water of about 75 degrees.

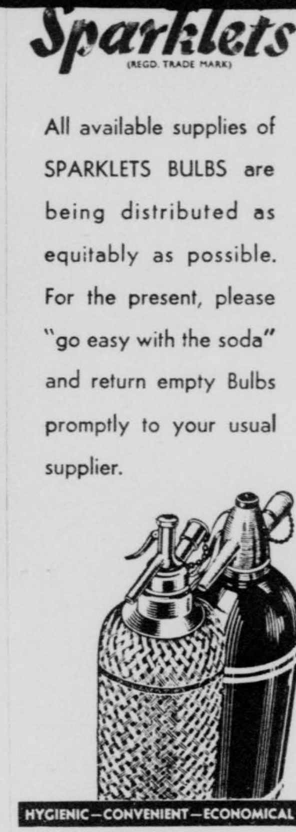
Not least of the cares of the Aquarium officials is that of the health of their charges. They arrive in travelling-tanks containing 50 gallons of aerated water, but can carry no warrant of immunity from disease. Before being placed on exhibition they spend some time in hospital tanks. Of all the ills that beset fish, fungus (*Saprolegnia*), a bacterial disease, is the commonest. The bacteria are present in nearly all water, and can make no inroads on a fish in good condition, but a weakened fish, once infected, breeds so many bacteria that other fish are infected, and develop a white spot that spreads and destroys. White spot is often introduced by a newly-acquired specimen, and it is prudent, therefore, to isolate all new-comers in the hospital tank to watch for it. Less serious cases can be checked by removing the patient to a dark cell, and adding rock salt to the water, but if this and other treatment fails, the fish and the keeper must abandon hope. A recent consignment of roach to the Aquarium was entirely free from blemish—not a white spot on any of them, declared their guardian, and they now may be seen, removed from quarantine, disporting themselves in their own glass-fronted tank. There are other ills, not a few, which the Aquarium doctor has to treat.



Naturally, the war has had its effect on the number of the inmates and its replenishment. Transport is the chief handicap, and the restriction of travel weighs heaviest on fish transported from overseas. The Regent's Park Aquarium still maintains a resemblance to a pre-war Wimbledon Lawn Tennis Championship in its assemblage of foreign entries. They have come from North and South America, from India, China, and Japan, Australia and Africa, but the quotas are greatly reduced, and the Latin countries have no representatives. The Mediterranean sea-horse is compulsorily barred. The difficulty of transport is aggravated by the expense, which applies specially to tropical fresh-water fish. Some fish that could be named would now cost the Zoo as much as a lion, and if they cost less to feed, would not survive so long.



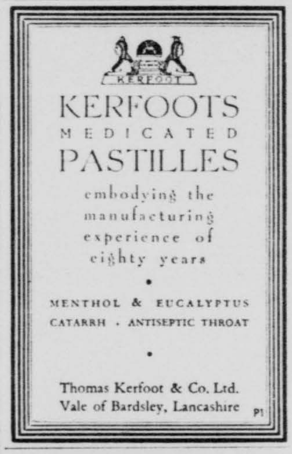
The angel-fish, from the Amazon, is one of those which put in a large bill of expenses, as may well be understood considering the difficulty of its capture in those mosquito-haunted waters. It is a beautiful fish, of a silvery hue, crossed with dark bands, which may change to black or disappear so entirely as to render the fish conspicuously absent. The gorgeous paradise-fish, its rival from China, is, in fact, altogether absent; and so are the fighting fish from Siam, where fortunes are waged on their encounters. But if some are gone, others remain, such as the charming little beacon-fish, with a ruby light in its eye, and an iridescent bicycle-lamp badge of the same colour on its tail. Here also are the reed-fish from West Africa; and the African catfish, which can give an electric shock in an unorthodox manner. Its electrical organs are distributed all over its body, so that anyone touching it receives a quite sharp electric shock up to his elbow.

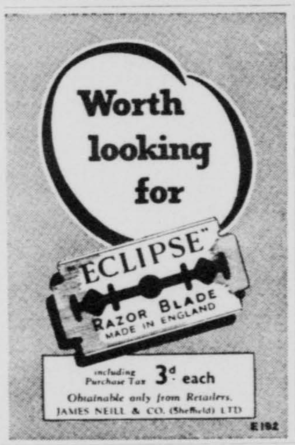


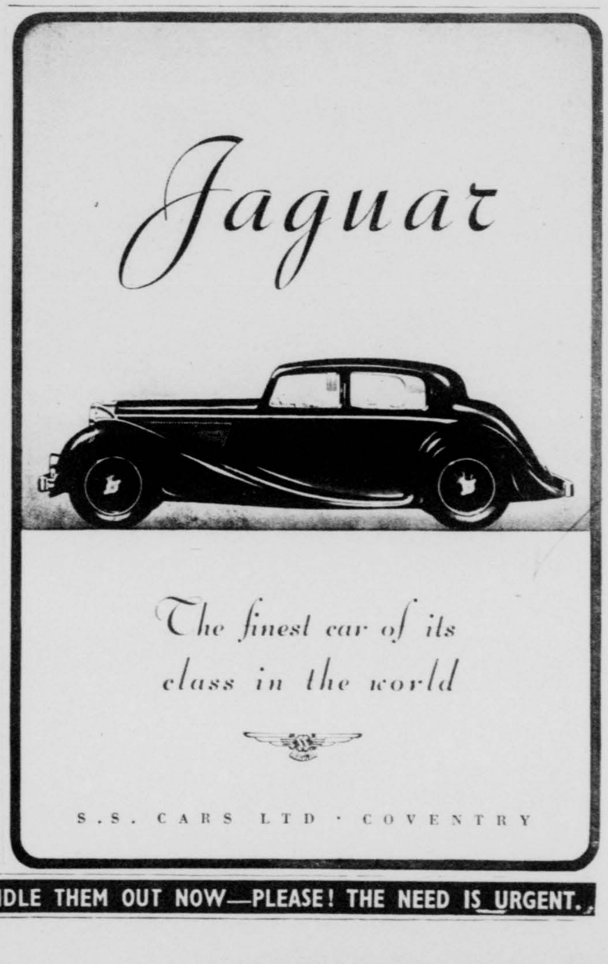
There are other fish less comely; and two of the strangest are of high interest, notwithstanding their ugliness. One is the Australian lung-fish, the only one in captivity, which travelled here from the stagnant waters of the Mary River, in Queensland. It is one of the most primitive of fishes, in which the swim bladder, usually a gas reservoir to adjust the fish's position in the water, has been adapted to the purposes of a lung, so that if water fails, the fish can fill it with air from above. The lung-fish is, in short, a link between a fish and an amphibian. In the Zoo Aquarium it oftenest lies sullenly at the foot of the tank, rising when it will to the surface to breathe. Another creature as unprepossessing is the salamander-like axolotol from Mexico, which, as Mr. Julian Huxley showed years ago, can be induced by forcing it to breathe air, or to absorb thyroid gland, to relinquish its repulsive larval form and become metamorphosed into a lung-breathing salamander.

Apart from these abnormal creatures, the fresh-water tanks display to advantage many of our English beauties, with a few allied forms from the United States as supporters. Our pike and eel dwell together in unalloyed neutrality, but the North American garfish, a silvery pike with a long nose, has a reserved cubicle. The pike and eel enclosure is the only one with its food in sight, and about the surface of the water "all unconscious of their doom the little victims play"—the minnows for the pike. The eel is less voracious, and one has been there seventeen years. The stickleback, the builder of a nest of which the male stickleback is contractor, architect and caretaker, is another fish which has a tank to itself because of its pugnacity.

By contrast, bream, chub and carp share a 30-ft. tank with no display of animosity, but much interest in their daily fare: the carp especially displays a lively anticipation, coming to the surface when it hears the footsteps of its keeper bringing the rations. One carp is an acknowledged veteran, though it has no opportunity yet of reviving the legend of the Fontainebleau carp which became centenarians. Others are worthy of mention, among them the bright swarm of perch. These are a pleasure to look upon, and if as much cannot be said of the lung-fish or the axolotol, they afford to those who seek it a lesson in evolution, as well as an example of some of Nature's fitful moments.







The fact that goods made of raw materials in short supply owing to war conditions are advertised in this publication should not be taken as an indication that they are necessarily available for export.

FROM AUSTINS TO AUSTIN OWNERS

There are times when even the commendable keenness of Austin owners to do an outsize wartime job would be better restrained. Remember, it's no help to the country to ruin a valuable set of tyres—even in a good cause. Overloading produces localised stresses on tyre walls, resulting in broken casings and rapid wear. Overinflation is no remedy—it only makes the rubber more liable to cuts and does the road-springs no good. Always keep within the load specified for your tyres.

WHAT THE R.A.F. HAVE DONE TO BERLIN DURING RECENT RAIDS ON THE CENTRAL AREAS OF THE GERMAN CAPITAL. This is an area of approximately 1,100 yards by 850 yards immediately south of the Tiergarten and east of the Zoological Gardens. The Landwehr Canal runs from left to right, and the Lutzow Platz is seen in the lower left centre. Block after block in this considerable area has been completely gutted—striking evidence of the devastation caused by uncontrollable fires

This photograph, and those reproduced on pp. 4-5, were secured recently by an R.A.F. reconnaissance aircraft over Berlin. They are the most graphic yet obtained showing the effect of R.A.F. Bomber Command's tremendous blows at the heart of the German capital since the real Battle of Berlin was opened by the heavy night-bombers in November 1943. Since that time, and to the date of this reconnaissance, Berlin had been visited fifteen times in very great strength by the R.A.F. alone. The honeycombing effect of uncontrollable fires which swept block after block is particularly evident in the districts around the western end of the Tiergarten. The enlargements given on this page and on pp. 4-5 of specific areas in the German capital emphasise the havoc that has been wrought by R.A.F. bombing

A WAR NEWSLETTER —No. 239

1, New Oxford Street, W.C.1.

Red Pimpernel.—Where the devil have those Russians got now? I seek him here, I seek him there but that elusive pimpernel always eludes my latest-cut map. And henceforth I must abandon commentary and "run cunning" with prophecy. It looks bad when my remarks on the capture of Kherson appear as news on the day when the dailies are making play with business on the banks of Pruth. I don't know when "these lines will see print." Shall I gamble on Lwow, Cernauti, Odessa, and describe the booty which fell to the Pimpernel in those strongholds? Or shall I estimate the visible supplies (in barrels) at Ploesti, or describe the scenery on the western slopes of the Carpathians? Or shall I give a picture of the ruined streets of Berlin (from air photographs supplied by the M.O.I.)? Or, alternatively, shall I obstinately maintain my balance of probability and remind all wishful thinkers that there is no escape from the Western Assault; that mountain ranges and concrete defences in depth, rivers and bogs, strewn across 600 miles of territory, lie still between the Red Army and Berlin, and that, even for Stalin's marshals and men, the impossible is not yet a probable? Nor yet for the Western Allies the dread and dreadful certainly.

Italy.—If I have written little about the Italian fronts, it does not mean that I have thought little. I have thought much and sympathetically of what our men have done and suffered in a form of warfare of which at least I know something from old experience. When our men were in the trenches in Flanders and the Somme (in the last war) and Allenby was driving the enemy back in the East in open warfare, it was Allenby who got the halfpence and Haig the kicks. And these last weeks (it is natural) the limelight and the bouquets have gone to the Russian front, for all that Russian mud is deeper and nastier than Flanders ooze and Russian difficulties as great as any encountered in the static warfare of 1916 or 1917. It is natural enough and only half unjust. The Russians deserve every bouquet, and then some. But so, in all conscience, do our Eighth, Fifth and Allied armies and forces. They are writing new chapters in the record of military courage, endurance and initiative under intolerable conditions, holding, advancing, sticking it, in pestilent conditions in the most difficult terrain imaginable. And the flower of our manhood is dying for those bloodily-gained inches. We have faith in our armies and in those who lead them and planned for them. The Italian venture was never planned without a contour map of Italy; the normal (or abnormal) conditions of weather in the mountains south of Rome were examined before the broad plans were laid. Neither the existence of mountains nor foul winter weather can have come as a surprise to them. They knew what they were about. Chances were taken, and perhaps missed. That is war—always a guessing game. But these men, fighting in Italy so grandly, are doing a vital job, influencing the tides of battle hundreds of miles away. They are in our thoughts and hearts, a constant source of pride and anxiety. God keep them!

Medals.—The parable of the labourers in the Vineyard again! We are not content to receive every man a penny. We think we deserve tuppence and the other fellow a bare halfpenny. Mr Churchill put it all fairly and fully, sympathetically and gracefully, and with humour. If it seems odd to interrupt the war effort to defeat our mortal danger (before it be too late) with a debate on haberdashery, it seems odd only to those who refuse to accept the accepted weaknesses of human nature. Men cannot live by bread alone. They need sugar cakes. A pat on the back (in visible form) is stimulus and makes for dignity, responsibility and serenity of mind. In the end (I make no doubt) everybody will get a bit of ribbon except the British housewife, of course, who has borne the burden so bravely, so cheerfully, in "mufti," on the Home Front. She must be content with oratorical dewdrops; and when she proudly "shows her medals" they will be the medals of her menfolk and maids in uniform. Well, she expected that. It won't worry her. She is immune, she is immense. She is above rubies and gewgaws. If anything can vulgarise medal-ribbon, it will be *her* omission from the great divide.

"THE SPHERE" MOONLIGHT CHART FOR THE MONTH OF APRIL, showing the period of no moonlight and the period when the moon will be at its full

A limited number of these charts will be supplied free of charge on application to the Publisher, "The Sphere," Commonwealth House, 1, New Oxford Street, W.C.1, but 2½d. in stamps must be enclosed with the application

Scurrilous Critics.—"As the day lengthens, so the frost strengthens" is a countryman's saw born of observation out of time. And certainly the wind continues to be bitter. A journalist's variant suggests that as the war lengthens, the wind of criticism grows more bitter. Constructive criticism is good for any journalist and he welcomes it, especially if he doesn't take too pompous a view of his calling. The critic he despises is the bludgeoner or garrotter who lies in wait to assault him without notice: the reader who dashes off an insult anonymous or with a signature illegible from sheer fury, because of some opinion expressed with which he disagrees; the egotist who longs to express himself but, finding no editor ready to employ his services, falls back on "letters to the Press" and wordy insults concerning other men's views which do find their way into print; the suspicious mind ever ready to cry "treachery," "subversion," "cowardice," "pro-Nazism," "anti-Churchill," wherever he meets any honest effort to pierce the fogs of war and to set out the pros and cons of problems of the hour. If the criticism of such readers (I find them an insignificant handful) were to be taken seriously, our Press would be more enslaved than Goebbels'. How often Mr Churchill, who has spent a fighting life in support of freedom of opinion, must cry, "Save me from my friends of this type." Much of what is produced in words every day is redundant and unnecessary. The output of the miner or the farmer is 100 per cent. important. The miner and the farmer know their worth and use their worth as a handle to secure their charter. But the honest journalist, too, is *conscius recti*, and has a charter of sorts. I have, and in it is no clause which bids me truckle to the scurrilous, the anonymous, the egotistical and the Gestapo opinion of correspondents-in-vitriol. I rely on my majority of readers. Neither they nor I expect journalism to be omniscience or *vox dei* in any form, or indeed even a pattern of consistency. They ask only that it should be indifferent, honest opinion (of the hour), reasonably restrained, reasonably courageous, reasonably sane and impartial. They do not want it to be the ape and mirror of every shade of view. Only the garrotter insists on that. To any such garrotter who thinks *any* journalist is a fair and easy Aunt Sally for his half-bricks, I personally say "Guess again" or look out for a whole brick back.

Human Frailties—Amiable and Otherwise.—Constantly I am shocked by the enormous interruption in the national war effort due to the necessary truckling to human weaknesses, innocent and otherwise. I see that evidence in every walk and field. I will take one or two unrelated examples. The desire for visible recognition of good service is an amiable and innocent human weakness. Yet to satisfy it, the labour involved in factory and offices to implement the desire is out of all proportion to its value. Take the "flashes" for C.D. and H.G. These visible signs must be turned out in factories and distributed through hundreds of offices whose first duty should be the training and organisation of their forces for defence at a now once more vital juncture. And here, from the experience of a magistrate, I cull a couple of examples of less amiable weaknesses. Village gossip and scandalmongering leads to an assault. The case comes to court. Half-a-dozen busy magistrates, three or four policemen, two or more solicitors, all with essential work to do, may waste an entire day, with the working hours of many witnesses (farmers, and so on), in the hearing of a miserable trial of pygmy matters in dispute. Or a rebel against authority, an egotist with persecution mania, may mortgage the time of a score of officials for weeks, and even months, on end before at last he is jugged for refusal to pay his fines or attend his summons to court. It is magnificent that we answer these saboteurs of the war effort not with rubber truncheons and concentration camps, but with all the facilities of civilised justice, and all the deference due to the good citizen seeking his rights. It is magnificent, but it is not war. And I wonder by how many irretrievable months these amiable and unamiable saboteurs have prolonged this present disaster and national danger.

"Privileged" Fledglings?

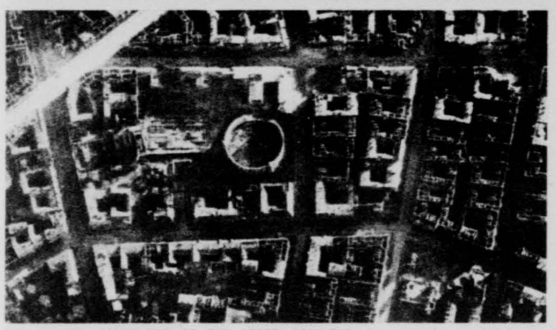
Walking down Eton High Street the other day, I concluded that a visit to the famous school to-day would disarm any surviving critics of privilege in education—and disarm at a mere glance. It still costs a deal of money to park your boy in King Henry's holy shade and leave him to find his way to the sunshine and light of knowledge; and still, I believe, in essentials (attention to the individual, development of individual bents and character, and so forth) the money is not thrown away. But the boys are not band-box boys. It is clear enough they are no longer, if ever, wrapped in cotton wool. The clothes-brush and the hat-brush are laid aside, and they have much still to learn of the use of the boot-brush. If the little Etonian is a walking advertisement in Eton High Street, he doesn't advertise privilege to-day. I had a sentimental twinge as I passed so many little dusty scarecrows. I felt no doubt that they were still being well fed and well looked after in school hours—that *business* was as usual—but that with the organisation of their leisure and their wardrobes, five years of war had played havoc; the clock has gone back and in some particulars life at Eton had retrogressed to the hard school of 1840. And those particulars have not lost their importance to-day—on the contrary, they are the very particulars which national conscience to-day requires to be stepped up in national schools. Odd?

The Old Stager

BRITISH RIFLEMEN IN ACTION AT CASSINO ENSCONCED BEHIND ROCKS AT THE FOOT OF A SLOPE OVERLOOKING THE TOWN. The battle for Cassino and Monastery Hill began on March 15, when medium and heavy bombers rained bombs on many objectives for four hours (see pages 14-15 of this issue). This was continued by the greatest artillery barrage so far laid in the Italian theatre of war, to cover the advance of the Allied tanks and infantry as they entered the town. Fierce fighting then took place in Cassino, in which the New Zealanders were prominent in reducing many of the enemy strong-points. The Germans, however, hit back hard; later, they regained some of the ground they had lost in the first days of the Allied attacks

TWO PICTURES from CASSINO

Where the Struggle for the Town and for Monastery Hill Still Continues Fiercely



AFTER THE NEW ZEALANDERS HAD BEEN IN ACTION: German troops taken prisoner are held by two soldiers beside a Sherman tank. During the battle for Cassino, New Zealand troops formed the spearhead of the advance into the town, after having been transferred from the Eighth Army front on the other side of Italy

IN THE OUTER INDUSTRIAL DISTRICTS OF BERLIN, HEAVY DAMAGE HAS BEEN CAUSED TO HIGH-PRIORITY MUNITION PLANTS, in addition to the devastation wrought in the heart of the capital itself. In earlier attacks on Berlin (before the R.A.F. penetrated in force to the central areas), these targets had been heavily hit. Recent reconnaissance reveals that—whilst, in some cases, repair work has been attempted—further heavy damage has been inflicted. A notable example is the great Siemens electrical concern, two major plants of which are shown by the photographs to have been heavily hit. This one shows the Siemens and Halske electrical plant at Siemenstadt. Over an area of approximately 900 yards by 720 yards there is very heavy damage in all sections, including the switchgear works, dynamo works, research laboratories, warehouses and offices. *(A second photograph of this area is given on the facing page)*

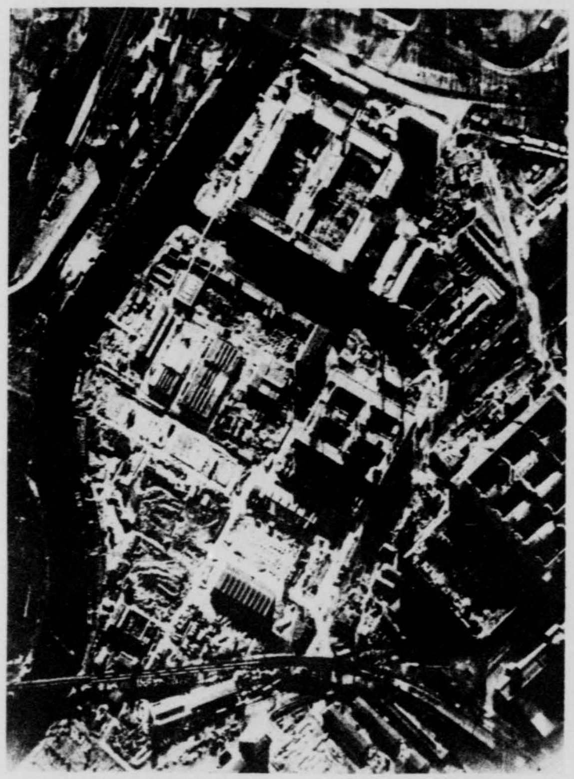
BERLIN AFTER THE R.A.F. RAIDS

The Heart of the German Capital Laid Waste Since the Opening of the Battle of Berlin in November 1943

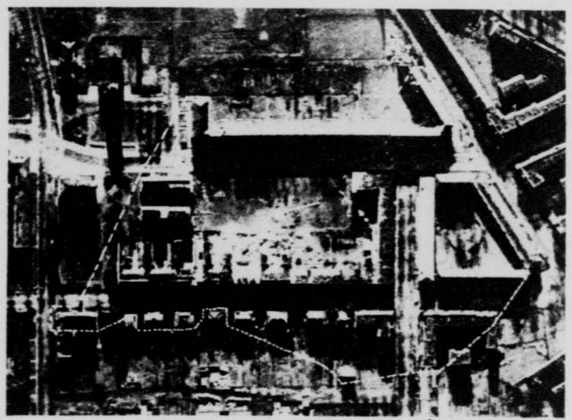
THE GUTTED GASHOLDER OF THE STADT GASWERK (in centre), south of the Tiergarten, with the burned-out Scala fronting on the Lutherstrasse to the left. Here the area shown is approximately 550 yards by 400 yards

IN THE CENTRE OF BERLIN. A—Engineering firm's premises destroyed; B—Premises occupied by a group of automobile engineers completely destroyed; C—Roofs of buildings belonging to two engineering firms repaired after damage from a previous attack; D—Iron foundry, belonging to A.E.G., severely damaged by high explosive and fire; E—Osram G.m.b.h., makers of radio valves and associated products, practically all gutted; F—One of the A.E.G. works, making parts for turbines—large buildings all destroyed

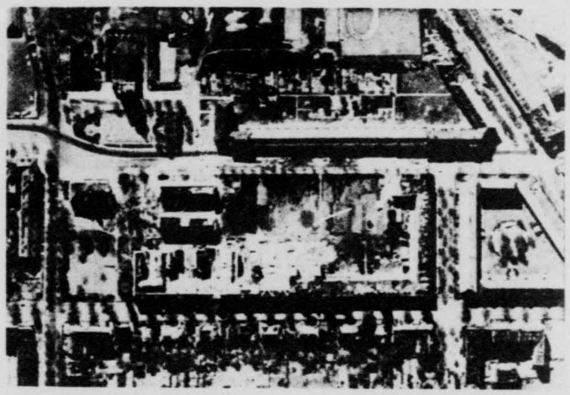
A set of official photographs just released by the Air Ministry to show the damage to Berlin achieved by Bomber Command since the opening of the real Battle of Berlin by the heavy night bombers in November 1943. Fifteen attacks in very great strength have been made since then and up to the time of the securing of these pictures



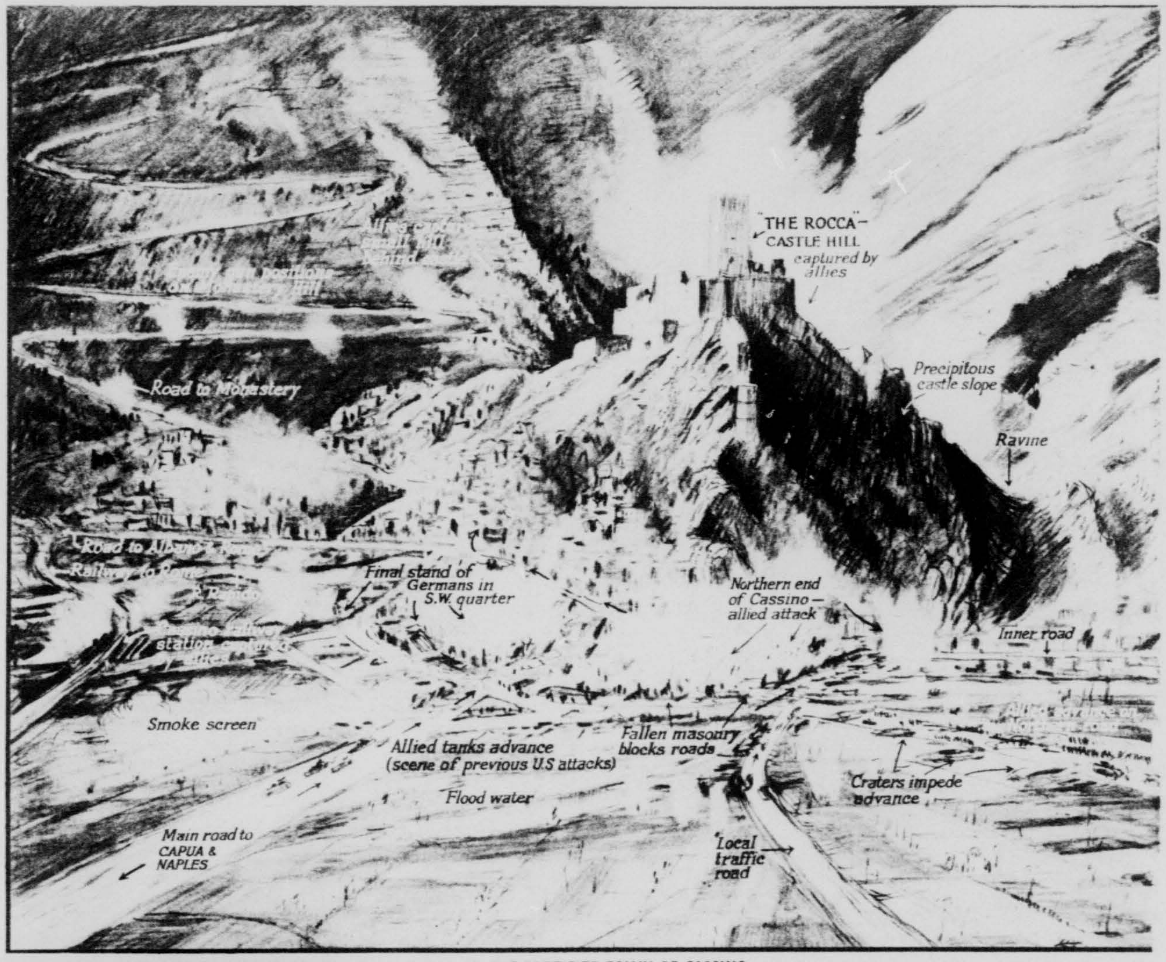
THIS PAGE IS DECLASSIFIED IAW EO 13526



THE AIR MINISTRY BUILDING (at top of picture—the largest building in the view). This fronts the Wilhelmstrasse, in Berlin, and lies between the Leipzigerstrasse, on the right, and the Zimmerstrasse, on the left, in the heart of the capital's Whitehall. Although the Air Ministry shows no obvious sign of damage, many public and official buildings in the immediate neighbourhood are either completely destroyed or very severely damaged. The area shown here is approximately 700 yards by 620 yards



THE MOABIT DISTRICT, north-west of the Tiergarten. Here there is overwhelming evidence of a tremendous spread of fire. In the left centre is the Hansa Platz, and the Spree runs from top right to bottom left. The area shown is approximately 1,200 yards by 900 yards.



ANOTHER SECTION OF THE SIEMENS AND HALSKE PLANT AT SIEMENSTADT (see also top left of facing page). Severe damage caused by the R.A.F. attacks in September 1943 was, in part repaired and clearance work was carried out. But later attacks caused fresh damage among the buildings of the chemical works, electrical machine workshops and the railway control system building. The area shown here is approximately 800 yards by 600 yards

I—AN 8,000-LB. BOMB ON BERLIN: This photograph, and the one below, show the effects of a block-buster dropped in a Berlin suburb. The upper picture was taken a month after the bomb was dropped. It shows the crater filled in (marked with an arrow) and the visible area of destruction, covering approximately 4,700 yards. The outer dotted line shows an area of approximately 14 acres, over which buildings are seen to have been damaged by blast, as revealed by re-roofing and repairs

II—AN 8,000-LB. BOMB ON BERLIN: This picture, taken still later than the one above, shows the bombed site after considerable clearance. The ends of damaged buildings have been squared off and the crater surface levelled over

THE ASSAULT ON THE FORTIFIED TOWN OF CASSINO, WHICH FOR SO MANY WEEKS WITHSTOOD THE ALLIED ONSLAUGHTS. The lines of assault across the Valley of the Rapido, and how the Allied columns entered the town by various routes after an artillery and air bombardment of unprecedented ferocity. The famous Castle Hill is shown in the centre of the drawing : the Monastery lies outside it, beyond the top-left hand—*Drawing by Percy Home*

CASSINO—The Storming of the Town and its Castle Hill

How the Allied Infantry followed up the Terrific Bombardment

—Special Sphere Drawings (see also pp. 14-15)

The concerted attack on Cassino opened from the north. Allied infantry and tanks advanced towards it along what was described as a specially-constructed road leading up to the northern outskirts of the town. A creeping barrage and smoke-screens gave protection to the infantry, who advanced in short rushes from cover to cover.

This cover was provided by the masses of fallen debris from the destroyed houses. Towering above the scene is the Castle Hill, a mass of rough limestone unscalable on its northern side (at the foot of which a ravine adds to the natural strength of the site). The air and artillery bombardment during the morning had destroyed the upper parts of nearly every building in the town, save a few which were hidden by a shoulder of the Castle Hill. The infantry fought their way through this tangle of debris towards the south-west portion of the town, where the Germans were making a desperate stand in the chief hotel. In the same area is the Railway Station, captured by the Allies after a fierce struggle.

The situation for the attacking force was made difficult by the natural features of the scene. Rising behind the Castle Hill are the lower slopes of Monastery Hill, with its winding roadways. All this high ground provided gun sites, hidden in caves; tunnels and crevices for the German guns, mortars and *nebelwerfers* to operate against exposed bodies of infantry or tanks.

The fighting gradually included most of the town, as well as a large area of the lower slopes of Monastery Hill. Allied forces worked their way forward behind Castle Hill and secured small eminences: these were later counter-attacked by the Germans with varying success. The enemy showed great stubbornness at every point, direct hits being required to knock out gun after gun

THE FAMOUS MONASTERY ON MONTE CASSINO, almost hidden by the pall of smoke during its bombardment by American planes. The buildings and the surrounding hill-side had been fortified by the Germans in order to defend the town of Cassino at the base of the hill, and many Allied soldiers lost their lives from the guns installed by the enemy within the Monastery walls

THIS PAGE IS DECLASSIFIED IAW EO 13526

THE BIGGEST ALLIED BOMBERS TAKE PART IN THE BOMBARDMENT OF CASSINO. The town and its Castle Hill are lost to sight under the clouds of smoke as the Fortresses unload their high explosives—*Drawing by Roland Davies*

The preliminary assault on the town of Cassino was carried out by both aircraft and artillery. A defended, stone-built town is one of the hardest nuts to crack in modern warfare. Early in the morning the medium bombers went in, operating from a height of 8,000 to 10,000 ft. Then the "heavies"—Fortresses and Liberators—took up the running. The tendency of the big bombers to "spread" their loads meant that the infantry had to be withdrawn from the objective to a considerable distance away. In the case of medium bombers, the withdrawal is considerably less. "There is a quality of lordly, even arrogant, impersonality about a bombing attack on this scale," wrote one observer of the scene. "The bomber achieves a haughty and rather terrible detachment. It appears to operate after the manner of some relentless force of Nature than of a machine fashioned and controlled by men. . . . They passed serenely overhead, they discharged their mission, they returned in the same serene manner. I say that, without any exception, this was the most terrible display of air power that I have ever seen"

DURING THE AIR BOMBARDMENT OF CASSINO, one of the most concentrated of the war. The town and the Castle Hill (top right) are being bombed by wave after wave of Allied planes

AFTER THE TERRIFIC POUNDING OF THE TOWN OF CASSINO: The innumerable craters delay the Allied entry into the bombed town until the sappers are able to erect light-infantry bridges across the shell-holes on the north road—*Drawing by E. G. Lambert*

One of the problems arising out of a heavy combined attack on a fortified town was exemplified at Cassino. When the bombers, heavy and medium, went in to wreak destruction on the stone buildings sheltering the German machine-gun posts, they created such big craters on the roads that the Allied tanks and infantry were held up in their advance. The craters began to fill up with rain-water; the situation was such that no filling-in was possible. The sappers, working with great skill and courage under enemy mortar-fire, constructed bridges of various types to span the big holes. In order that the infantry might follow up the barrage without delay, light foot-bridges were constructed of the type shown in this drawing. The men proceeded forward in single file, and so into the rubble-choked town

THE FOUR PILLARS OF CZECH WISDOM

The Future of the Country which was the First to Fall Victim to Nazi Tyranny

By FERDINAND TUOHY

1939: "A far-away land of which we know little."
1944: "A near-at-hand country of which we'll hear much."

SUCH, I venture to suggest, will prove to be Czechoslovakia during the next five years which, President Benes assures us, are to form a separate period "in the history of our State" from the first twenty years of the Republic.

We shall hear much of Czechoslovakia for an assortment of reasons. Because of Prague's central, key position in relation to Continental rehabilitation, political re-orientation and policing. Because the Czech leaders envisage their land as a bridge for cementing the U.S.S.R. with Western Europe, and their success or failure will show if a small, strong nation can influence Great Powers. Because Czech reliance on the U.S.S.R. should test whether the latter is to overlay its lesser neighbours. Because the alliances and close friendships formed by the Czechs will clarify whether regional agreements are an aid or a hindrance to a League successor.

Because the Czechs have adopted an active policy towards each of the Great Powers which will

WHEN HITLER WENT TO PRAGUE to proclaim the Czech State part of the German Empire: The scene in the historic Hradcanny Castle in March 1939, after Germany had invaded and occupied Czechoslovakia after the trumped-up Sudeten "problem." Hitler is on the right, addressing the members of the Czech Army Staff, with General Keitel in attendance. When Hitler later appeared on the balcony of the castle, "he was loudly cheered by a large gathering of German residents in Prague"

have the leading say in European affairs. Because what the Czechs manage or are allowed to do with their Germans will be a touchstone for the general problem. Because the Czechs' correction of past errors will give an indication of what has been learnt. Because Czechoslovakia's new domestic planning will hold an interest commensurate with this country's pioneering record betwixt wars. And, not least, because Czechoslovakia can be a practical friend of Britain's on the Continent, and is ready for the part.

Czechoslovakia used to be called the chief success from Versailles. Thanks to Allied victory, which they ever respected, and still do, the Czechs went well on the way to a balanced and sensible democracy. They and the Slovaks had been held down under a feudal system, so first the land was split up among 650,000 small farmers. No estate larger than some 600 acres was permitted. In industry, conditions were vastly bettered by such things as the 8-hour day, factory committees, holidays with pay and sharing of mining profits.

Years before the war, a comprehensive Beveridge system was in operation, which covered 10,000,000 people in a population of 15,000,000. Under it, 1,500 hospitals, clinics and sanatoria were put at the disposal of the citizenry.

Expectant mothers could absent themselves for six months prior to birth, and afterwards; children were cared for under a lavish programme of Health First. Following which, they were given an education which Founder Masaryk intended should give a fundamental interest and dignity to life. If worship was not stressed, a complete level of tolerance and availability was practised. And the *mens sana* principle was rounded off by the Sokol system, under which 1,000,000 young people of both sexes pursued bodily fitness on the Greek model of inculcating comradeship, art and beauty, as distinct from the championship and commercial approaches to sport.

Utopia? Not a bit of it! The Czechs made mistakes, not least towards the Slovaks. Too many political parties were encouraged, and too much latitude was given to minorities for the security of the State to bear. A protectionist policy was adopted which helped to ruin Austria, and eventually it reacted on the Czechs themselves. The Czechs were too fussy over passports and permits, too self-assertive for a budding people. But these hard-headed folk had only just come from under, and that is the way of things.

What matters to-day is that the mistakes are admitted. And that, together with their lack of rancour, is something to admire in the Czechs. For recollect how their country "fell" through little fault of the owners. How, in 1938, they were ready to defend themselves in a strong military position on the strength of treaties with Russia and France, and through France, touching Britain. Old history? Yes, but new history too, since Czechoslovakia intends to push off afresh, relying once again on the same three countries, Russia, Britain and France, plus the United States.

As the western Slav outpost, Czechoslovakia signed an all-in treaty with Russia, which differs from the pre-war one in that either party will assist the other regardless of the existence of any other treaties. The tie will be fortified by a re-arrangement of trade in Russia's regard. Provided the Anglo-Russian Treaty works, the Czechs see themselves automatically linked with Britain through their own alliance with the U.S.S.R. With regard to the United States, strong Czech sympathies

THE FÜHRER RIDES THROUGH CZECHOSLOVAKIA—in triumph, but closely guarded. Another picture taken in March 1939 as Hitler drove through the Czech town of Brunn after the annexation of Czechoslovakia. He was closely followed by the usual Nazi gunmen, and the soldiers lining the route faced outwards—towards the populace

prevail there, and a Hoover Street and a Wilson Station commemorate the fact in Prague.

But the Czechs believe that Europe requires a fourth pillar. In the words of President Benes: "Continental security demands a fourth principal pillar—France." Foreign Minister Ripka looks to "the restoration of France as a Great Power, the existence of which is one of the main conditions for an ensured peace and security in the world." A firm agreement already exists between President Benes and General de Gaulle. At the darkest moment, in London, they encouraged one another when many despaired, and the General regards President Benes as "a symbol of the cause for which the Allies are fighting."

It will be seen that the Czechs are in a peculiarly strong position by reason of their friendships with all four of their elected "pillars," to aid in the re-establishment of Europe in a degree out of proportion to the space they occupy on the map. They should owe much to their leader, whose war-time journeyings must come second only to Mr. Churchill's. Moscow, Washington, the Middle East, North Africa—Eduard Benes returns from them all as lively at sixty-three as he used to be at fifty-three and at forty-three at Geneva (where he doubtless learnt much, about himself as well as about others).

No one knows to what vindictive lengths the Germans may go before they leave Bohemia. In addition to the best part of 3,000,000 Sudeten Germans, nearly 2,500,000 other Germans have been settled in the "Protectorate" in the past five years, and, one and all, know what the Czechs have in mind. The Czechs want to push the whole lot out. In a radio call from London, M. Benes forecast "a mass anti-German revolution throughout Czechoslovakia against everything relating to the Germans."

The revolt, however, is aimed much more at ridding the national territory of the compatriots of Heydrich than at practising vengeance, and may the Germans in their own interest remember that fact when they are tempted to lay about them on departure.

This desire to augment the population of the Reich meets with criticism. If everyone does the same thing, runs the disapproval, Germany will soon enough burst again. Well, it's a big question. But an estimate is that by the compulsory exchange of national minorities between Germany on the one side and Czechoslovakia and Poland on the other, the population of Germany would not be increased by more than one-twentieth.

At the time of the Soviet treaty the Czech Government left the door wide open to a strong, free and democratic Poland. There is readiness to welcome the Poles into more of Upper Silesia than formerly, and this despite what happened when the Czechs were down and out in 1939. Without desiring to push Pan-Slavism, which is seen as a danger rather than a boon, the Czechs are working for a Slav Entente between themselves, the Poles, the Ukrainians, White Russians and Russians. This, they believe, is the best guarantee against a fresh German Drang nach Osten.

As important as the Czechs' attitude to the Poles are their intentions towards Austria and, through an agrarian Republic of Hungary, towards South Eastern Europe as a whole. Dr. Ripka has more than once come out for "a close political and economic collaboration with an independent Austrian democracy." This is almost an about-turn from the past.

A useful thing about the Czechs is that they know what they are after and possess moderation and good sense, attributes which have gained them many new friends. "A strange dispensation of destiny," says Dr. Ripka, "has deepened and extended Anglo-Czech friendship." Dr. Benes was thinking of it when, after looking in on a fellow-voyager at Marrakesh, he observed that his country "had not been ungrateful after the First World War and would not be ungrateful after this one."

However, the Czechs mean to avoid a repetition of 1938, and it will be of no avail for some of us snug islanders to protest against

THE MAN WHO BROUGHT ABOUT THE CZECH DOWNFALL. Konrad Heinlein, the leader of the Sudeten Germans, who was exiled by the Czechs, but later appointed by Hitler as Nazi Commissioner for the annexed territory

"this small militaristic State" when the Czechs re-arm, as they intend to: a strong Army and a far stronger Air Force than formerly. It will be a foolish cry, because aggression is alien to Czech thought, whilst their forces would be among the first placed at the disposal of a successor League.

But all this is the future. What of the present?

From London, the Czech Government have called upon all Czechs and Slovaks to come out in organised revolt without further waiting. There have been complaints in Moscow papers that Czech resistance has been too passive, even lagging, compared with guerilla activities in other occupied countries. Yet one can imagine people who feel themselves hated and marked being chary about revolting prematurely.

A matter for the Czechs; even as they will later have to face demands by the Czech Communist leader Gottwalk, when they come to rebuilding their free and democratic Republic, second edition. Gottwalk, who is in Moscow, claims that the big financial, industrial and agrarian interests and their political representatives failed at their jobs, and that too many went voluntarily over to the enemy.

Maybe, along with others, the Czechs would like to take the best from Russia, while remaining themselves.

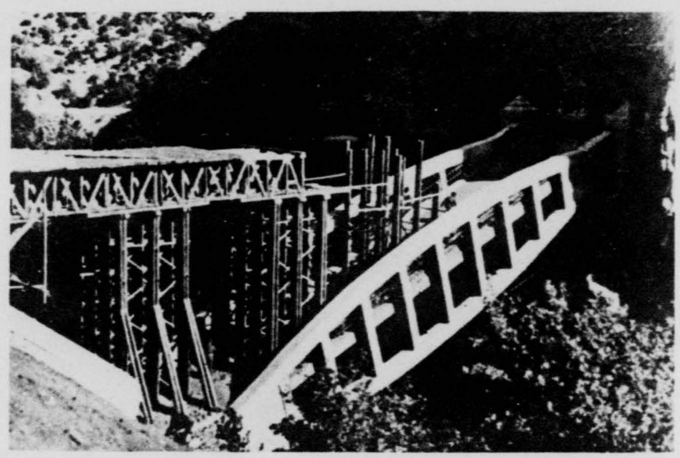
A BAND OF GREEK GUERRILLAS, OR ANDARTES, gather for a meal up in the hills. From their fastnesses they swoop down on the Germans, cutting lines of communication and wreaking acts of sabotage

The ANDARTES of GREECE

The Guerrilla Army which is Resisting the German Invaders

March 25 is Greek Independence Day. This year, the hope of freedom came nearer to reality for the people of Greece, who have never ceased to pray and to work for deliverance from the German yoke. Amongst those who have fought to make the hope a reality are the Andartes, the guerrilla army of Greek patriots. Since the first days of the German occupation the Andartes have been a force to be reckoned with : to-day they are a perpetual menace to the invader. Except in the cities and certain strongholds, no German is safe. The roads, bridges and railways throughout the country are under constant attack by the guerrilla bands. With the loss of the Italians and their own desperate needs in Russia, the Germans are unable to defend even their main communication lines in Greece The task of the Andartes is not simple, however. The Germans, unable to hold down the country by force of arms, have resorted to reprisals against the civilian population. In some areas they have burnt every village within a circle of 50 miles in reply to a successful coup by the Greeks. Thus a floating population of over a million civilians has taken refuge in the mountains, and must be fed and supplied. But the Andartes, with experience of past centuries of fighting an invader, increasingly well-armed and now united in a common effort against the Germans, will play an even more important part when the time for the liberation of Greece comes

FIGHTING FOR THE FREEDOM OF HER COUNTRY : A Greek woman who is enrolled in the ranks of the Andartes



BRITISH LIAISON OFFICERS WORKING WITH THE GREEK GUERRILLAS. In the background may be seen the scrub-covered mountains which the Andartes have made their home

AN ANDARTE CARRYING ONE OF THE BRITISH LIAISON OFFICERS across a river up in the mountain regions

AN ITALIAN ARMOURED CAR (Autoblinda 40) captured by the Andartes before the Italian capitulation

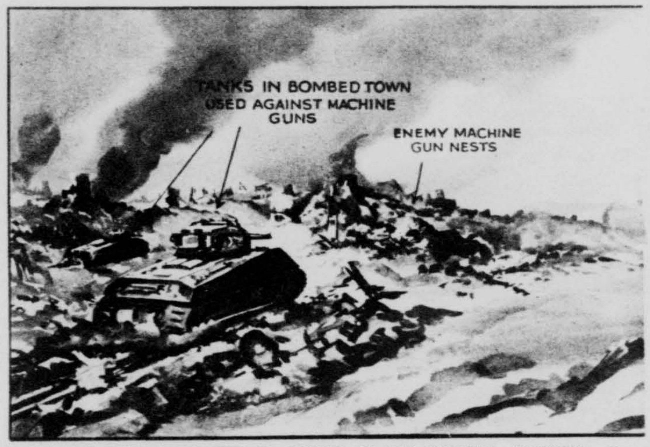
The USE of the TANK in ITALY

Where the Methods of Warfare are Different from Those Formerly Employed in the Western Desert

PERIODICALLY, military experts descend upon the tank and declare it to be full of grievous defects—if not altogether obsolete. In Parliament, a secret debate is taking place on this subject. The experts have had reports of shells knocking out the tanks and setting them on fire, when caught in some position into which they should not have been sent. The fact—not yet fully realised in certain quarters—is that the tank is peculiarly sensitive to its environment.

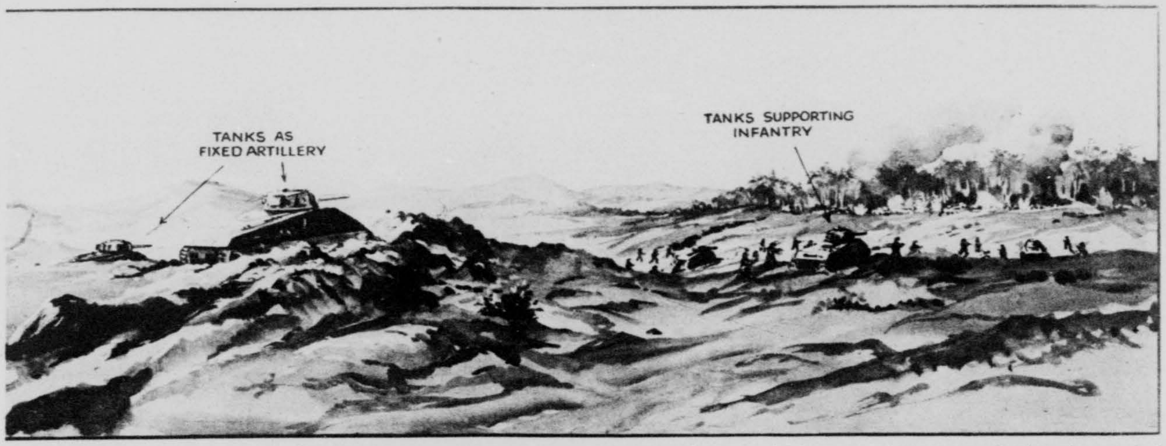
There are evidences that the enemy has been employing them from a distance. On occasions they have been thrown into a general assault to add to the total weight of the attack—obviously a High Command order which a tank commander "on the spot" might not have advocated, in view of unsuitable terrain, or some other similar consideration. On other occasions, German tanks have emerged ("sallied forth" would be a more appropriate phrase) upon bare, unprotected highways in a manner which has meant their almost immediate destruction—as at Caroceto during the recent Italian fighting.



On the other hand, a survey of the day-to-day uses to which tanks are being put by local commanders shows that this arm is a highly useful (indeed, an indispensable) weapon under certain conditions. Tanks, for instance, could be sent into the demolished streets of Cassino, where the principal targets were machine-gun nests. Here the tank could support the infantry by effective shell-fire, without running the risk of being knocked out by a superior counter-attack. On other occasions, the tank has "gone to earth" in useful fashion—as static artillery with hull-down silhouette alone exposed to the enemy. Again, where the broken nature of the country-side may have permitted it, tanks have usefully supported the infantry in an open attack.

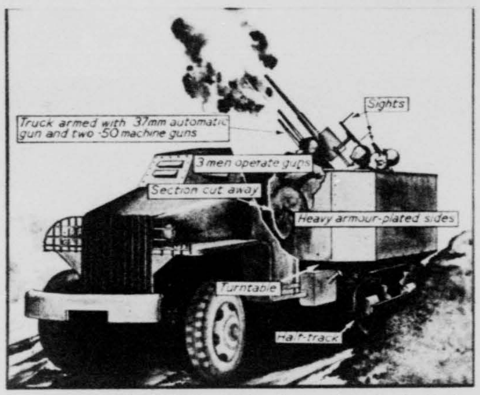
Tanks have also been used as a means of rapidly concentrating a force at a given point. The men clamber like bees on to the vehicle's exterior and deploy when the scene of action is reached.

Only occasionally nowadays does an old-fashioned tank *v.* tank battle develop on the old Western Desert lines. But the situation may arise in broken mountain country, and it must not be overlooked when considering the possibilities of the tank's activities.



HOW THE RUSSIANS USE THEIR TANKS: The Red Army has frequently been taken into action in this manner, crowded on the sides of the big vehicles. In this way, they have often been able to effect a surprise on the retreating Germans on the Eastern Front. This picture was taken during the operations around Leningrad earlier this year

1—HOW THE TANK IS EMPLOYED IN WARFARE ON THE CONTINENT OF EUROPE. On hull-down position to act as static



the left, tanks are advancing into the bomb-shattered ruins of a town to wipe out machine-gun nests : in the centre, they are seen dug into the grounds in artillery : on the right, they are advancing across country to lend support to attacking infantry—*Drawing by E. G. Lambert*

II—HOW THE TANK IS EMPLOYED (CONT.). On the left, infantry have mounted the vehicle and are being carried into action : on the right, tank engages tank in the old Western Desert style, firing their guns over open sights—*Drawing by E. G. Lambert*

A NEW HALF-TRACK VEHICLE used by the Americans in the Cassino area. The armament consists of an automatic 37-mm. gun and two ·50-calibre machine-guns. The vehicle is self-propelled, and its sides are armoured : usually camouflaged netting conceals "half-track" and guns— —*Drawing by B. C. Wood*

THE BIGGEST-YET BRITISH ARMOURED CAR—the A.E.C. Mark II. Details of this biggest and most powerful armoured car have only just been released. The A.E.C. Mark II carries the punch of a tank in the form of the now famous 6-pounder anti-tank gun : in addition, it mounts a 7·92-mm. Besa machine-gun, mounted co-axially with the 6-pounder, and a light A.-A. machine-gun on top of the turret. Powered with a Diesel oil-engine of proved reliability, developing 153 b.h.p., the A.E.C. has a maximum road speed of 42 miles per hour. Across country it can reach 18 miles per hour. The armour is 1¼ ins. thick in the front and 1 in. at the sides. The total loaded weight of the car is 12 tons, 12 cwts. A standard wireless set is carried. The tyres are of very large section and have the new familiar "run-flat" principle, which enables the car to keep going even after a puncture or a burst. The crew consists of commander, driver, gun-layer and loader, the latter acting as wireless operator as occasion demands

On left—**THE GERMANS USE THEIR TANKS IN A DESPERATE ATTEMPT TO FORCE THE ALLIES BACK ON THE ANZIO ROAD**—*Drawing by W. G. Whitaker*

Within the beachhead, where the fighting has often been of the bitterest nature, the Germans have been driven to using their tanks on the highway in a manner which has exposed them to the Allied counter-fire—with disastrous results for the enemy. Down the exposed, coverless road the German tanks have been seen to start crawling towards the battle line. Our guns on these occasions have plastered them and sent up the roads into leaping fountains of earth. Men like black specks have been seen to jump out of the helpless vehicles into the illusive shelter of a ditch, as some of them were hit and flared up with oily smoke pouring out of them

THIS PAGE IS DECLASSIFIED IAW EO 13526

CAPTIVE AMERICAN FLYING MEN. The German caption claims that all these men were shot down in one day over Occupied Europe. The men are en route to a prison camp for internment. The Germans quote their American prisoners as saying that the anti-aircraft defences had been "so awful that they thought they were in the infernal regions"!

BRIGADIER TILNEY (on right), who was captured by the Germans when we lost the island of Leros, in the Dodecanese. He is here seen talking to General Muller, the German Commander—presumably shortly after the Brigadier's capture

BRITISH SOLDIERS captured (according to the Germans) in the Nettuno bridgehead. The man nearest the camera is wearing the shoulder-flash of the Irish Guards. This picture comes to London by way of a neutral country

THE R.A.F. ATTACK ON THE AIRCRAFT BEARINGS FACTORY AT LA RICAMARIE, IN FRANCE—a photograph made during the flash of a heavy bomb explosion: Aircraft of R.A.F. Bomber Command attacked a needle-bearing factory at La Ricamarie, near Clermont Ferrand, France, on the night of March 10-11. This unusual oblique picture shows a heavy bomb exploding in the target area. The light from the explosion lit up the surrounding countryside and enabled the cameraman from the R.A.F. Film Unit, who was flying in one of the attacking aircraft, to make the picture. The works at La Ricamarie turn out needles and complete bearings for variable-pitch propellers, undercarriages and wheels. It has a capacity of from 7,000,000 to 8,000,000 needles and 160,000 bearings a month

GENERAL KESSELRING TOURS THE ITALIAN BATTLEFRONT. A picture made while inspecting his men outside the Anzio beachhead. The General is the tough-looking, burly man on the left; the other officer is his young aide-de-camp

A PARIS SUBURB AFTER AN ALLIED AIR ATTACK. This picture was taken by the Germans after the district had been plastered during a raid on December 31. There are many German-operated war industries clustered around the edges of the French capital, which make the great city a target for our bombers

THE IRREPRESSIBLE DR. GOEBBELS. "Europe is winning" is one of the slogans coined by the Propaganda Minister. This picture was taken in a Berlin war factory, which employs much foreign forced labour, whilst a meeting of the workers was in progress

BEHIND the SCENES in GERMANY TO-DAY

A Collection of Recent Pictures Showing Events in the Beleaguered Nazi "Fortress"

ADMIRAL HORTHY AND HIS FRIEND ADOLF HITLER. The Hungarian Regent, with other Hungarian leaders, was summoned to the Führer's Headquarters some time ago. Fresh demands were there presented to Hungary for a greater war effort, in view of the wonderful Russian successes on the Eastern Front. The Hungarians did not (could not, or would not) give Hitler satisfaction: they were detained at Headquarters until the occupation of their country by the Nazis was an accomplished fact; so the wily Regent has at last been trapped! Admiral Horthy, in this picture, is wearing the Iron Cross presented to him by Hitler when things were going much better for Germany

THE MAN WHO MAY BE HUNGARY'S QUISLING. Bela Imredy, a leading Hungarian pro-Nazi, of whom much may soon be heard in connection with the Quisling Government which the Nazis have already set up in Budapest. Ironically, he is wearing national costume in this special portrait

ANOTHER VICTIM IN THE LION'S DEN? According to a recent official announcement, the Croatian Prime Minister, Mandic, and Foreign Minister Peric visited the Führer's Headquarters on March 1 "to discuss all current mutual problems." Hitler is here greeting the unhappy Prime Minister, while the equally apprehensive Foreign Minister looks on (on the extreme right). Croatia was formerly part of Yugoslavia

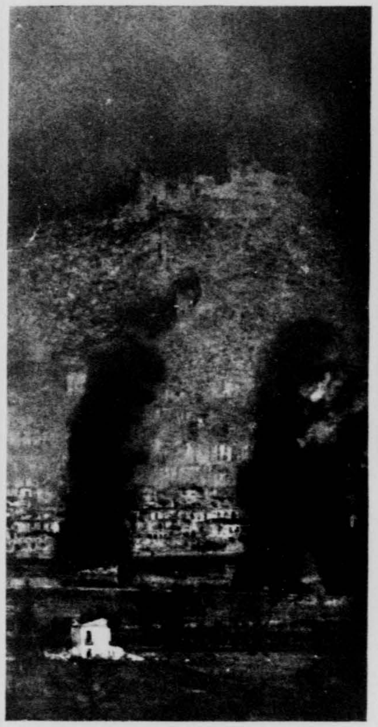
A MILITARY CONFERENCE IN PROGRESS at the Eastern Headquarters of the Nazis. The following high officers are seen in this picture: General of Artillery Hansen, Commander-in-Chief of a German Army (in centre); Infantry General von Oven, commanding a German Army Corps (on left); Major-General von Mellanthin (standing on right); and Major-General Rein (sitting at extreme right). All are "discussing the Russian military situation"

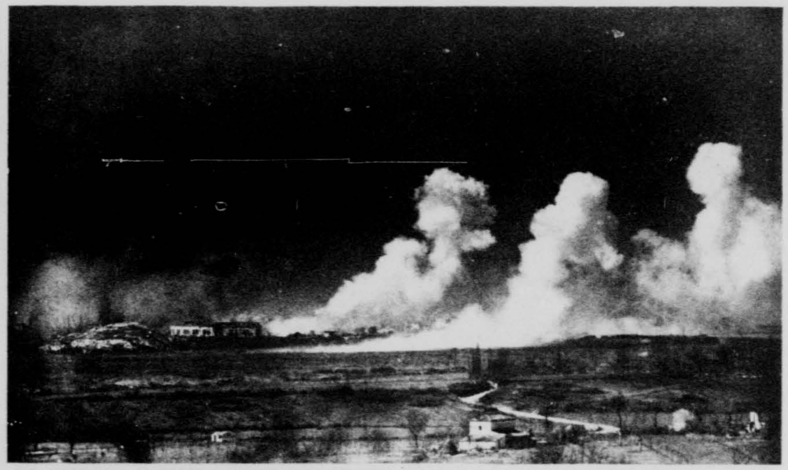
CARPENTIER MEETS MAX SCHMELING. The German boxer (on left) congratulates the French boxer in Paris on his fiftieth birthday. Carpentier has been named as a "quisling" by the Fighting French for his "collaboration" with the Nazis. Schmeling was wounded in Crete and discharged from the German Army a short time ago

THE SCENE IN THE UNDERGROUND A.R.P. CONTROL ROOM during an R.A.F. raid on Berlin. Seated on the right of the official with the telephone is Berlin's Police Chief, Graf von Helldorf

FAR BELOW THE BURSTING BLOCK-BUSTERS AND RAGING FIRES, Dr. Goebbels, Gauleiter of the German capital, studies a map of "incidents" as a raid develops. With him is the Director of Berlin's A.R.P., Gerhard Schach

THIS PAGE IS DECLASSIFIED IAW EO 13526





THE TOWN OF CASSINO UNDER THE MOST INTENSE WEIGHT OF BOMBS EVER PUT ON SO SMALL A TARGET. Spout after spout of thick black smoke leaps up from the earth as the heavy bombers pass over. Castle Hill, crowned by the Rocca, rises in a hump on the extreme right; the lower slopes of Monastery Hill (which is crowned by the famous Abbey) are seen on the left. Two thousand five hundred tons of bombs were being rained down on the town when this picture was taken on March 15

THE ATTACK BEGAN AT 8.30 IN THE MORNING OF MARCH 15. By noon the town was absolutely unrecognisable: it seemed to have lost all its original shape and character. Here and there gaunt houses were visible out of a pile of "rubble" when the dark clouds of smoke drifted away and it was possible to get some view of the work of destruction wrought by the bombers. This picture was taken during the height of the unprecedented attack

THE DENSE PALL OF SMOKE MOUNTING HIGH UP INTO THE AIR, with the whiter plumes of more recent bomb-bursts drifting with the wind. Behind the pall lies the town of Cassino, disintegrating under the attack

CASSINO LAID FLAT IN FOUR HOURS

Actual Pictures of the Terrific Bombing Attacks Carried Out on March 15

On March 15 the town of Cassino was flattened under the most terrific bombing attack ever witnessed in any theatre of battle. For long the town stood in the way of the Fifth Army striving to reach the road to Rome. Now it does not exist, except as a heap of rubble. Within the space of four hours, from 8.30 in the morning till lunch-time, a weight of 2,500 tons of bombs was rained down on the small target area by wave after wave of medium and heavy bombers flying ceaselessly above the doomed town. The intention was to reduce the many German strong-points to rubble and to smash all the Nazi defences. How this was achieved is revealed in the official pictures reproduced here, taken by the U.S. Army Signal Corps. After the attacks had begun, spout after spout of thick black smoke leaped up and coiled over Cassino until three-quarters of the town was completely obscured in the widening and deepening dark smudge. Only a few Messerschmitts got into the air to oppose the bombers, and only two of the eighteen waves of attacking planes encountered any anti-aircraft fire. After the bombing had ceased, a terrific artillery barrage from massed Allied guns opened up.

THE GAUNT HILLS BEHIND THE TOWN OF CASSINO HAVE COMPLETELY DISAPPEARED UNDER THE PALL OF SMOKE, and the town itself is beginning to disintegrate as the heavy bombs drop without ceasing. It was intended to reduce Cassino to a mass of rubble and to wipe out all the fortifications and machine-gun nests installed in the hotels and houses by the Germans. The town as such has now ceased to exist, and the roadway to Rome is now within striking distance of the Allied forces

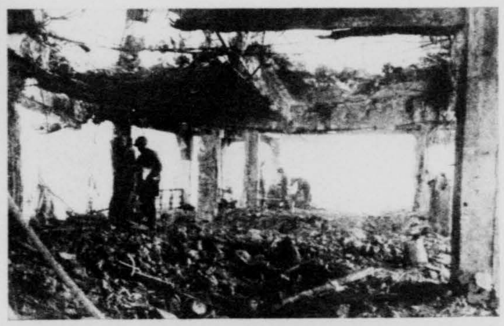
HOW THE AMERICANS WENT ASHORE FOR THE INVASION OF KWAJALEIN ATOLL, in the Marshall Islands—a picture taken during the assault on Namur and Roi Islands

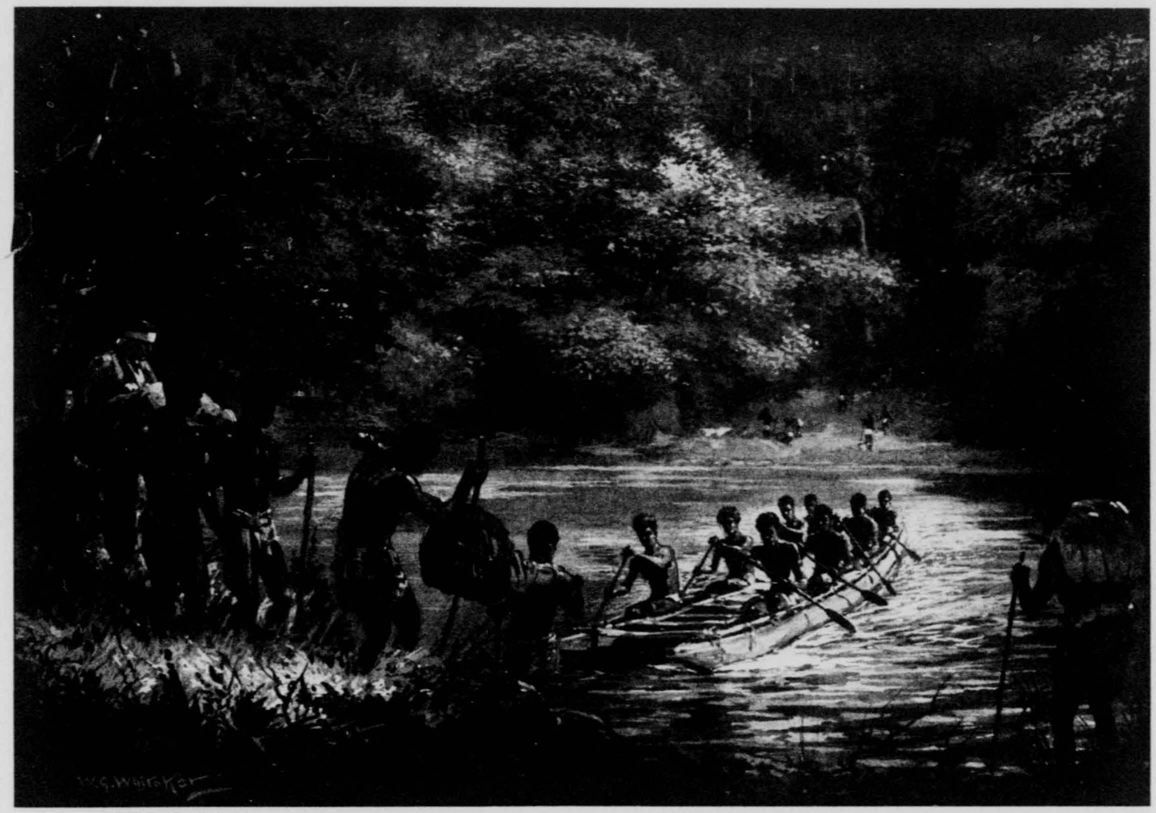
The WAR in the PACIFIC

Some New Pictures from the American-Occupied Islands and from New Guinea

As a further step forward in the Central Pacific, the U.S. Navy and Air Force attacked the Marshalls in February and successfully occupied certain of the atolls and islands of the group. The preliminary bombardments by sea and air were both considerable, and they paved the way for the invasion by "Task Forces." The above picture was taken as a swarm of Coast Guard and Navy landing craft were heading for the beaches of Namur and Roi Islands in the Kwajalein Atoll, after the guns of the Fleet and aerial bombs had pounded the Japanese positions unmercifully. By the end of the first week, 10 of the most important of the 32 atolls of the Kwajalein group had been captured, including the primary objectives of Namur and Roi. The Marshalls landings were accompanied by the greatest naval concentrations in history



A "COMMAND POST" IS CONSTRUCTED BY THE AMERICANS : A scene from Arawe, in New Britain, showing how these underground positions are constructed by U.S. infantrymen. The heavy construction is effective in warding off mortar and light artillery shells and light aerial bombs. It has proved the most successful type for pill-boxes, command posts and any structure needed to house vital equipment in jungle warfare



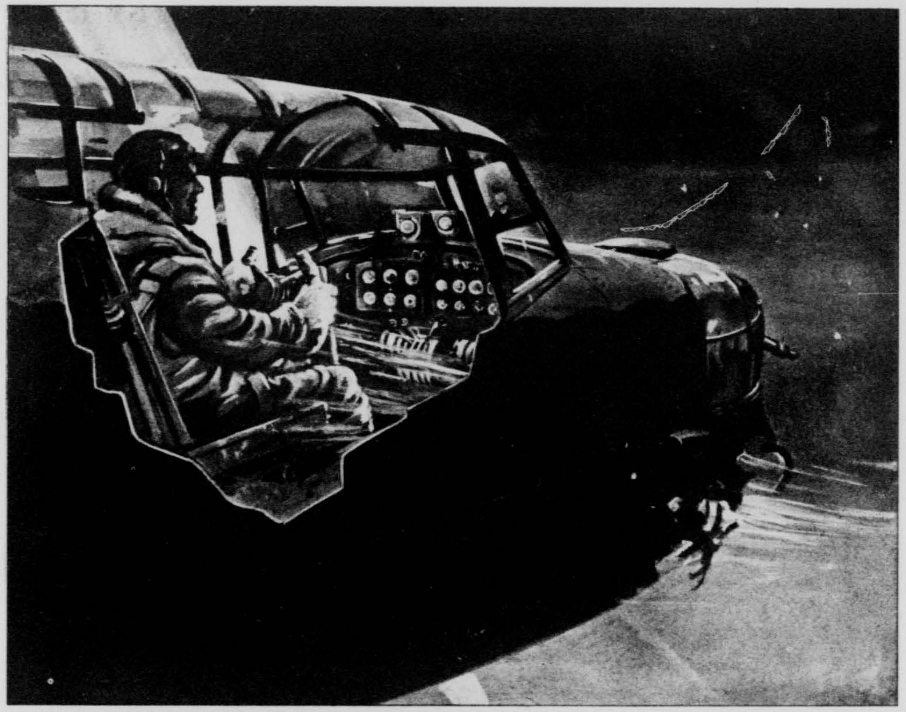
DURING THE ATTACK ON KWAJALEIN, IN THE MARSHALLS. Formed like a giant mushroom, a column of black smoke shoots skyward from exploding Japanese bombs and shells as carrier-based fighter planes blow up an enemy ammunition depot on Bigej Islet, in the Kwajalein Atoll, during the American operations against the Marshall Islands. Kwajalein, the largest atoll of this group, was captured in a combined American land, sea and air offensive in February. More than 8,000 Jap soldiers were killed in the action, but U.S. losses were light. Of the great number of American warships participating, none was lost

DEATH IN A FOXHOLE IN THE MARSHALLS : An American Marine, rifle in hand, has just shot a Jap who had refused to leave his foxhole during mopping-up operations on Kwajalein. The incident occurred on Namur Island, where Jap foxholes had been reinforced with concrete blocks

THE REMAINS OF A MIGHTY JAPANESE "BLOCKHOUSE" : This building consisted of three storeys : it was built of reinforced concrete on Namur. Nevertheless, it was totally demolished after the terrific air and sea bombardment just before the invading American troops went ashore

A SCENE IN NEW GUINEA SHOWING THE INDISPENSABLE PART PLAYED BY THE NATIVE BEARERS IN THE SOUTH-WEST PACIFIC OPERATIONS and the various types of work they carry out. Without these men, the task of the Allied troops would be almost impossible—*Drawing by W. G. Whitaker*

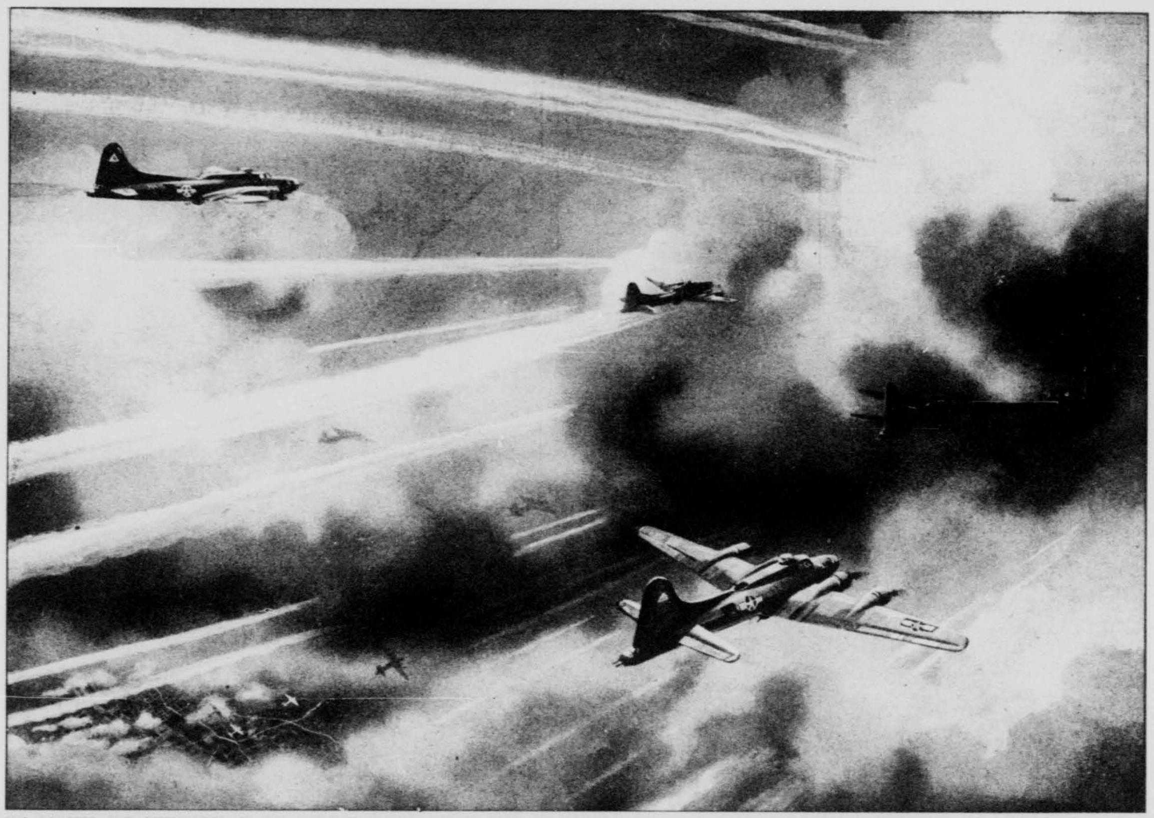
Without the help of the native porter in New Guinea, the operations in the hills and jungle of that difficult country against the Japs would have been impossible. "These native carriers," writes one informed expert, "work about six hours a day. If a porter works longer he wears out rapidly." A normal load is forty pounds: this can be carried up steep ridges, and the men can go on climbing for three hours with only short spells. The carriers are divided into detachments of about twenty men, each commanded by a "boss": their pay is ten shillings a month, with food, tobacco and clothing supplied. To give them more would be to demoralise them! The natives build their own camps along the supply route, and there they stay the night. Supplies for the Army are passed from camp to camp until they reach the actual battle zone. Roads do not exist in the parts of New Guinea where American and Australian soldiers are now fighting: for white men to take up their own supplies and fight at the same time would be an impossibility, hence the importance of the native bearer. They handle all types of equipment, and carry all the necessary supplies right up to the forward areas.



A STARVING JAP PRISONER is fed by his captors after the victorious assault on the Marshalls. The man on the left is an American-born Chinese in the U.S. Army

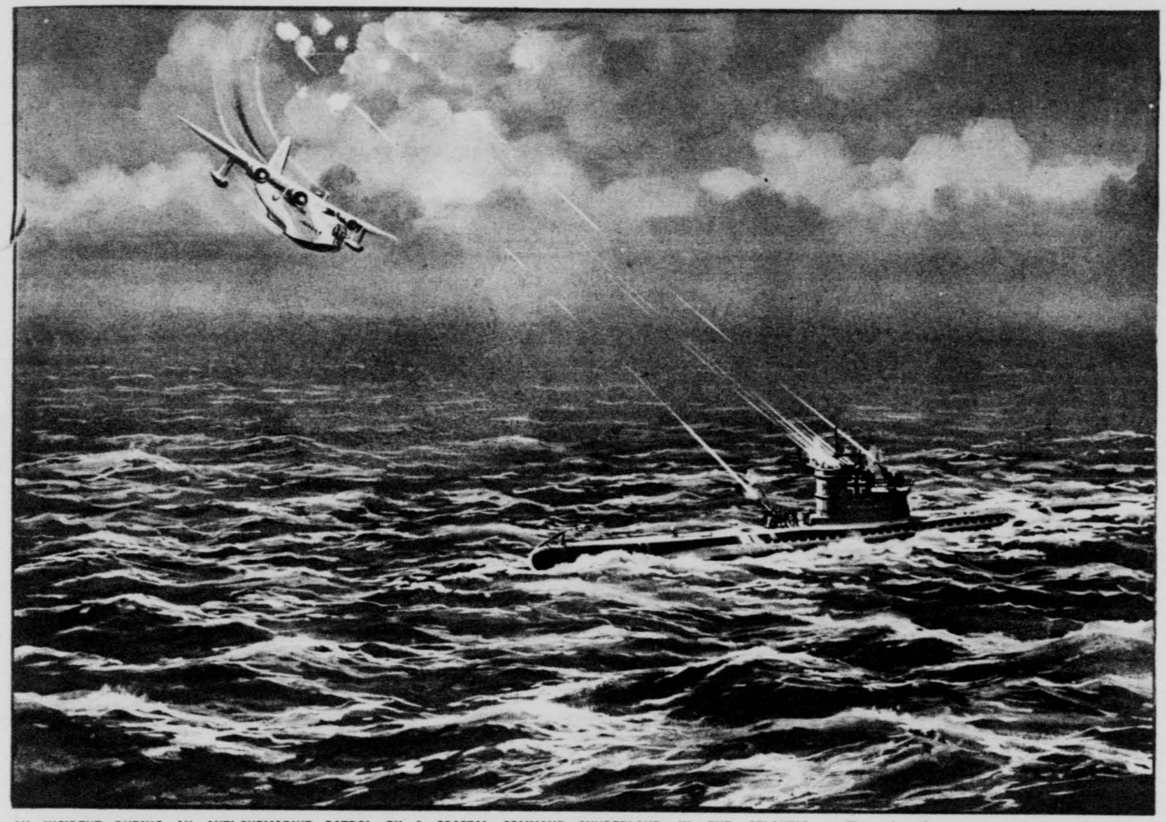
LEFT TO DIE BY HIS COMRADES. This wounded Japanese soldier lies huddled in pain after he was left behind by his retreating comrades in the Sanga River area in New Guinea. He was taken to a Casualty Clearing Station and received food and proper medical attention. So far as the Jap High Command are concerned, badly-wounded soldiers are not worth attention, and are frequently abandoned on the battlefield

IN NEW GUINEA: Natives carrying a wounded man down the slopes of "Shaggy Ridge" to the Army Dressing Station at Guy's Post. In the background is the Faria River with the Ramu Valley in the distance. This picture gives a vivid impression of the type of country in which the native bearers operate in New Guinea



LOW TEMPERATURES OVER GERMANY DURING RECENT BIG RAIDS: A Lancaster pilot on a flight to Berlin is frozen to the controls after the nose of the aircraft had been damaged by flak. It was difficult to free his hands, and he has now lost two of his fingers though frostbite—*Drawing by Roland Davies*

THE WAR IN THE AIR



Bombing Germany in Sub-zero Weather Conditions; An Incident during the U-Boat War; An Air Station in the African Bush

Weather conditions during recent big raids on Germany have not always been favourable for the Allied bombers taking part. On many occasions the cold has been intense, the thermometer dropping as low as 58 deg. below zero—which is very cold indeed! The drawing on the left depicts what happened to the pilot of a British Lancaster when the nose of his aircraft was hit by flak over Berlin. On the return journey the unbroken stream of icy air flowing into the cockpit froze the pilot's hands to the controls. It was difficult to free them when he landed, and he lost two fingers in consequence, through frost-bite. That is what the airman's most searching and subtle enemy can do!

The American daylight bombers have also experienced severe weather, which some of them have described as the worst thing encountered during a flight over Germany. In recent days the temperature over Europe has been very low indeed, and the clouds have been so thick at times that the pilots could not see the planes flying only a few yards away on each wing. On these occasions the bombers have had to fly high to get above the weather, using "overcast bombing technique" as one pilot put it. As high up as 27,000 ft. some of the aircraft have still been in heavy cloud, with ten-tenths cloud beneath them.

THE DANGERS AND DIFFICULTIES OF THE WEATHER DURING RECENT RAIDS ON BERLIN: a formation of Flying Fortresses passing through heavy clouds on the way to the German capital. On this occasion there was cloud up to 27,000 ft. and the temperature fell as low as 58 degrees below zero, many of the crews suffering from severe frostbite—*Drawing by Roland Davies* (See notes above)

AN INCIDENT DURING AN ANTI-SUBMARINE PATROL BY A COASTAL COMMAND SUNDERLAND IN THE ATLANTIC: The aircraft captain outwits the U-boat commander by diving *under* the flak and destroying the submarine—*Drawing by Roland Davies*

The Sunderland was on patrol several hundred miles west of Ireland when the U-boat was spotted on the surface. The flying-boat attempted to make use of cloud cover, but the enemy sighted it and opened fire at 3,000 yards range with all guns. Instead of aiming at the aircraft, the U-boat put up a box barrage through which the Sunderland would have to pass to make an attack. "I made as though to climb above the barrage," said the pilot, "and then, when the U-boat lifted it, I promptly dived under." At 1,000 yards range the front gunner opened up with immediate and terrific effect. At 400 yards the U-boat attempted avoiding action with a sharp turn to port, and at 200 yards the enemy's fire was silenced. Depth-charges were dropped from 50 ft., and very soon the submarine simply disintegrated

On right—

The man who, before the war, was Marine Superintendent of Imperial Airways is now the Commanding Officer of a Royal Naval Air Station, which has recently been hewn out of the African bush. He is Commander C. Oliver Foley, O.B.E., R.N., and his command, near the coast of Sierra Leone, is H.M.S. "Spurwing," one of the newest and largest air stations in West Africa. This is situated in what, only a short time ago, was African bush. Many tasks have to be undertaken by "Spurwing's" aircraft. There are convoys to be met out at sea and escorted; anti-submarine patrols to fly over the Atlantic, perhaps developing into a U-boat hunt with destroyers and corvettes; coastal reconnaissance flights have to be undertaken; and, not infrequently, urgent up-country flights have to be made to bring a patient to the base hospital. The station's boundaries enclose a first-class modern airfield, as well as barracks and all the installations of a large naval establishment. An arm of a river runs up to the edge of the airfield, and here are moored the station's amphibious aircraft, which can taxi downstream and take off over the shipping they are to protect

A NAVAL AIR STATION ON THE BANKS OF A RIVER IN SIERRA LEONE, IN WEST AFRICA. The station has been cut out of the primeval bush: aircraft operating here include Kingfishers, Seafoxes and Walruses. In this quiet arm of the river minor repairs can be done while the planes are still in the water (*See notes at left*)

RUMANIA IN 1912. Before she had regained Transylvania, the Bukovina, Bessarabia and the Dobruja. In that year, the country had only a small strip of coastline on the Black Sea, and she was definitely one of the weaker powers in the Balkans

RUMANIA IN 1939. The Dobruja was gained from Bulgaria in 1913, Transylvania from Hungary in 1919, Bessarabia from Russia in 1920, and the Bukovina from Poland. This was the moment of Rumania's greatest expansion—but it was not to last long!

RUMANJA ASKING FOR PEACE TERMS?

What She Has Acquired—and Lost—in Territorial Possessions During the Last Thirty Years of War and Intrigue

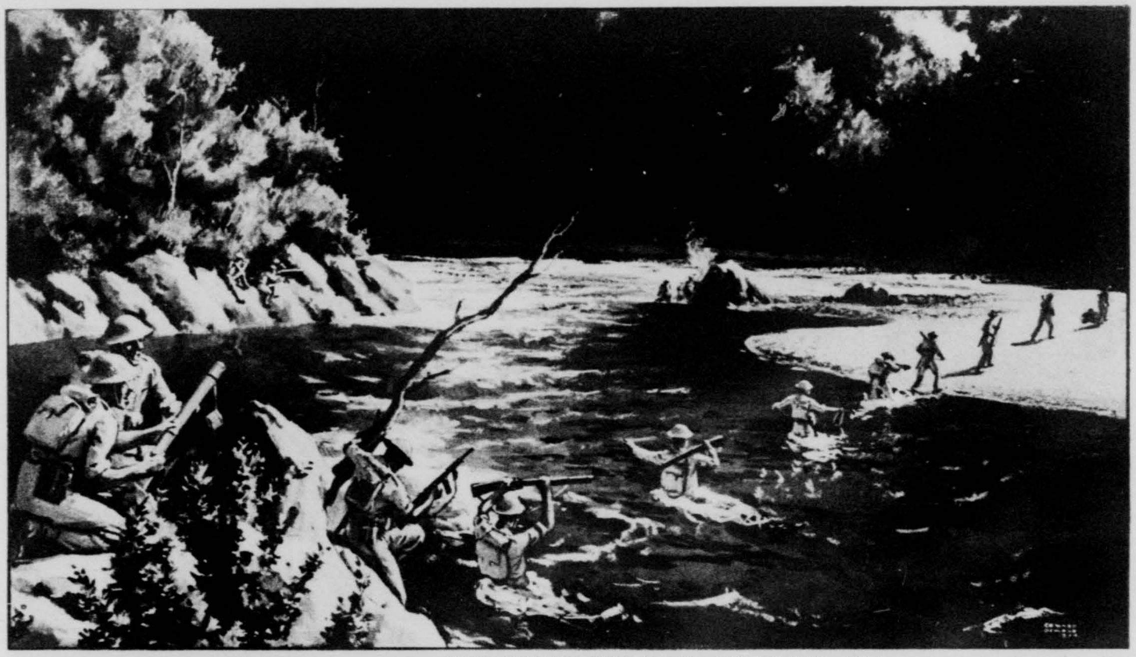
THE statement reported by Dr. Benes that Stalin considered that Hungary must be forced to restore Transylvania to Rumania gave the opening for Rumania to prepare a break with Germany. For the return of Transylvania the Rumanians are prepared to yield the territories claimed by Russia on their eastern frontier. They are a Latin people, with a Latin language, looking to the West for their culture, and apt to despise their Slav neighbours. They regard Transylvania as the cradle of their race, and hate Hungary, who held it to the end of the Great War, for her oppression of the 2,000,000 Rumanians living under her yoke. These Rumanians did not occupy specialised areas in Transylvania (as did the Sudeten Germans in Czechoslovakia), but were inextricably mixed up with the Hungarians, making it an insoluble problem to divide the territory equitably.

WALKING INTO THE LION'S DEN. In April 1943, Marshal Antonescu was "received by the Fuhrer for a two days' conference. The Fuhrer and the Rumanian State leader once more confirmed their firm will to continue the fight until absolute victory." Marshal Antonescu (in centre) is here seen on his way to Hitler, with Field-Marshal Keitel on the left and State Minister Meissner on the right

In August 1940 Hitler made the vital decision, without considering the opinions of either State, of returning to Hungary more than half of Transylvania which had been given to Rumania by the Peace Treaty of 1920. Hungary rejoiced, but was not to be satisfied with less than the whole, and Rumania, forced to yield to the power of Germany, was in despair.

Though the Rumanian Government under General Antonescu (who has held complete power since the abdication of King Carol in September 1940) joined the Axis and sent millions of Rumanians to fight in Russia, the people, have little heart in the war. After regaining Bessarabia which had been occupied by Russia in June 1940, the Rumanians had no desire to fight for Germany in Russia, even though great promises of land in the Ukraine were held out as bribes. They only wanted to return home and fight Hungary. Their losses have been tremendously high, 200,000 reported killed, apart from the very large number of very seriously wounded.

A glance at the three maps will show the changes which have occurred to the shape and frontiers of Rumania. In 1913 Rumania consisted chiefly of the two former principalities of Moldavia and Wallachia, with the small district of the Dobruja, lying south of the Danube, added at the Treaty of Berlin in 1878. In 1939 Rumania appears in the map increased almost to double her original size, by the addition of Transylvania, Bessarabia and Bukovina, ceded to her at the Peace Treaty of 1920. By 1940 Rumania had shrunk again in size, having lost more than half of Transylvania to Hungary, the Dobruja having been returned to Bulgaria and all Bessarabia and Bukovina having been taken by Russia. After Germany attacked Russia, the Rumanians again reoccupied Bessarabia, but already Russian troops are at the frontiers, and the peasants are hurriedly returning to Rumania, and there is every likelihood that Bessarabia will have to be given up again.



RUMANIA IN 1940. In September 1940, Transylvania was partitioned by Hitler and part given back to Hungary; the Dobruja again went back to Bulgaria; and Bessarabia had already been ceded to Russia, together with the Bukovina

ON THE RUSSIAN FRONT. On June 6, 1943, "German and Rumanian troops were celebrating the anniversary of their attack on Sevastopol." On this day Antonescu visited the eastern front with other high Rumanian officials, and here he is seen talking to Captain Wack of the German Army

GERMAN IRON CROSSES FOR RUMANIAN SOLDIERS. These Rumanian nationals distinguished themselves during the fighting at the Kuban bridgehead when this picture was taken they were stated to be in action along the Crimean coast. A German officer made the awards of their Iron Crosses

ACROSS THE JUNGLE RIVERS IN THE ARAKAN PENINSULA : Allied troops pursuing the Japs as they retreat into the jungle in the Buthidaung-Mayu area—*Drawing by Edward Osmond*

THE FIGHTING IN BURMA

The experts say that in May the weather conditions in Burma will become such that all serious campaigning must then come to an end for the time being. But, meanwhile, Allied troops on the Arakan front have been following up their advantages and forcing the Japs to retreat back into the jungle after the break-up of the enemy attempt at encirclement of the British 7th Division. The drawing reproduced above shows a typical fighting scene within this area: the British troops are fording a swift-flowing jungle river by night, with wary outposts protecting the operation from the river banks. The principal weapons, it will be observed, are Service rifles, automatic guns and mortars serving as mobile, short-range artillery

SEVEN MEN AND A BOY save Battalion treasures in Arakan : Fighting their way out of a Japanese ambush, seven Gurkha riflemen (accompanied by a five-year-old Bengali boy—a waif they had adopted) forced their way through the tangled Burmese jungle for seven days, to bring back the Battalion treasure-chest containing several thousand rupees. A gunner is here seen inspecting the Gurkhas' identity-cards on their safe return to the Allied lines

A SCENE AS THE 7TH DIVISION FOUGHT ITS WAY OUT OF THE JAPANESE RING : Men of the 1st Punjab Regiment of the Fourteenth Army are here seen carrying a stretcher-case aboard a special hospital sampan on the way to a Casualty Clearing Station. This picture was taken at the time when the Japs had encircled the 7th Division, hoping to force a way through to North-Eastern India. Their attempt failed, and the initiative in this battle area has now passed to the Fourteenth Army

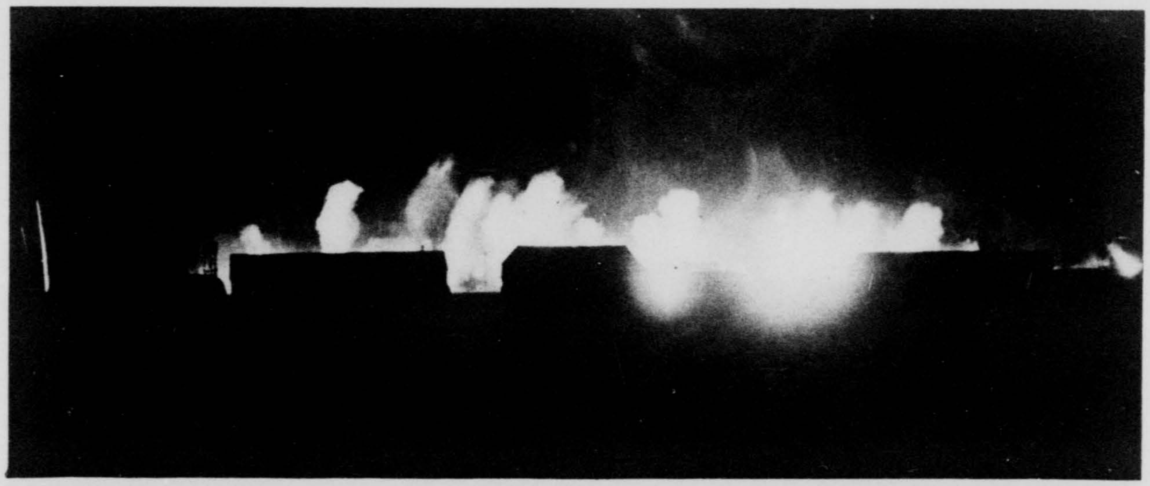
PUNJABI TROOPS AS FIRE-FIGHTERS on the Arakan front : Villages in this region suffer from enemy bombs and shell-fire. Here Indians of the 16th Punjab Regiment are seen helping to extinguish a village fire after a raid which proved disastrous for the lightly constructed native houses

THE UBIQUITOUS JEEP brings a casualty to the Medical Staging point, from which he will be transported by sampan to the C.C.S.

A CRUDE STRETCHER is used to evacuate a Chinese casualty. A big American transport plane, used for supply, stands in the background

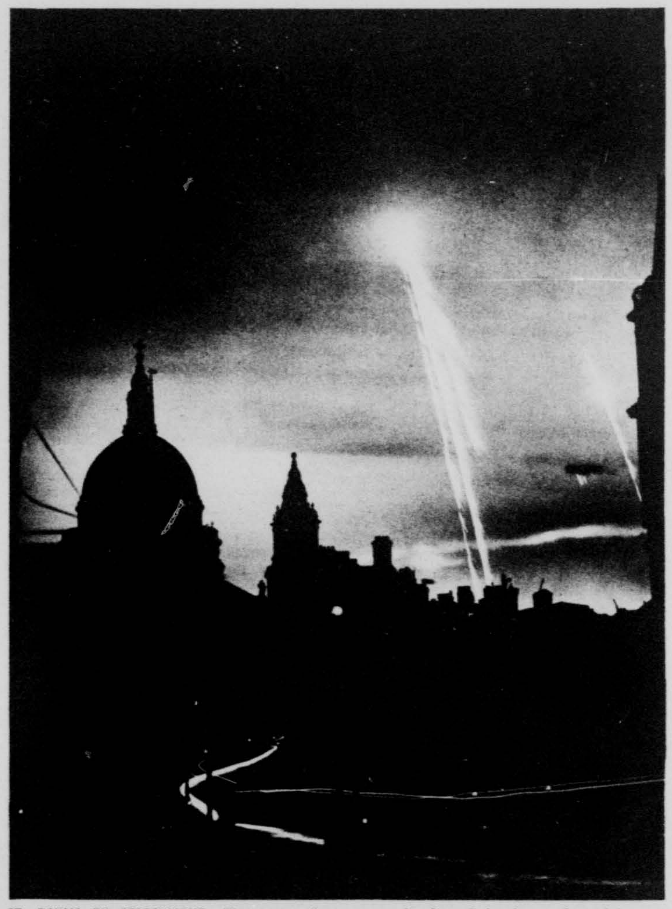
SCENES DURING the RECENT NIGHT RAIDS on LONDON

THE MORNING AFTER THE RAID: Firemen salvaging valuable antiques from a shop which had been damaged the previous night. Few of these articles of furniture were affected, although the building itself suffered from blast



U.S. SERVICEMEN SALVAGE THEIR KIT after the building in which they were quartered was set on fire. The top floors are seen alight in the upper left of the picture

A PILE OF SALVAGED GOODS, from shops burned during the previous night's raid, heaped on the pavement. Shopworkers are rummaging amongst the miscellaneous collection in order to identify their own belongings



A LITTLE TRAGEDY OF THE RESUMED BLITZ. An elderly couple sit amongst the belongings which were brought out of their home when it was damaged during a recent night raid

AN UNUSUAL PICTURE, TAKEN BY NIGHT, SHOWING A CLUSTER OF INCENDIARY BOMBS BURNING ON THE OUTSKIRTS OF LONDON. The houses are all of the semi-detached, residential type: many of the bombs have dropped on open ground; those which have fallen on the houses are being tackled by the fire-fighting parties organised by the local householders themselves

A FAMOUS LONDON CHURCH: Charred rafters from the burnt-out roof have fallen on to the pews, but the altar is still intact. The churches of London have suffered very heavily

ST. PAUL'S BY SEARCHLIGHT. The extraordinary scene in Central London a few nights ago during the height of a "Luftwaffe" raid. The strange trails seen on the right come from the rocket shells sent up by our secret A.-A. projectors

PRISONERS' PARCELS LOST IN A RAID. Red Cross parcels destined for British P.O.W.s were stored in a Territorial drill-hall. Many were destroyed when the hall was hit by fire-bombs: what remained were salvaged in the manner shown above

A CHEERING SIGHT "THE MORNING AFTER." The engine of a German raider, thrown fifty yards away when the plane was shot down on to empty shops within the London area

THE FIREMEN AT WORK. Even while the bombers are overhead the N.F.S. are at work quelling the blazes caused by incendiaries. In many areas of outlying London, it is the little houses which have suffered most damage

The HOME GUARD and the COMING INVASION

The Present Position of the Great Army which Sprang into Being after the Dark Days of Dunkirk

By CHARLES GRAVES

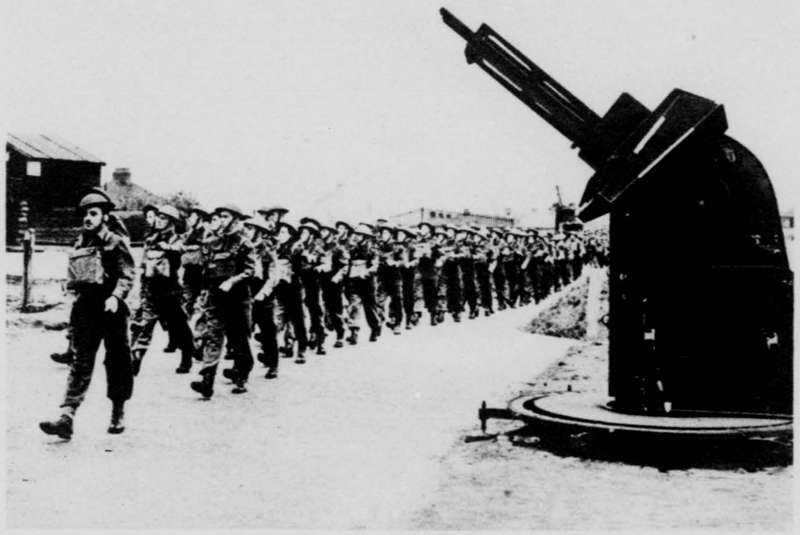
ONCE again the invasion season has started, and the question of the Home Guard's military efficiency comes up for discussion. There are, of course, three possibilities. There is the remote chance of a seaborne invasion coupled with an airborne invasion; there is the possibility of an airborne invasion; and finally, the comparative likelihood of the landing of airborne suicide squads whose job would be to disrupt communications and sabotage everything within reach before being rounded up.

The War Office has already decided what role the Home Guard would play in any of these eventualities, but one cannot discuss them in print. It is possible, however, to say that the Home Guard would be exceedingly useful to the Regular Army in containing and helping to defeat any landing in this country, manning observation-posts, doing night patrols, holding bridges, barring roads, catching spies, and even sending out mobile battle patrols to deal with small squads from the air.

It is always a mistake to generalise particularly about a body of men so diverse as the Home Guard. What may be perfectly true of one battalion may be quite inaccurate about another. Even inside the same battalion there are astonishingly varied degrees of efficiency. This is only natural when so many members of the Home Guard are factory workers whose hours of attendance on parade are largely affected by their work, usually of national importance.

Apart from this, the situation in the depths of the country on the one hand or in the heart of a town on the other, has naturally affected the amount of training possibilities. With the shortage of petrol and transport, it has been much more difficult for commanding officers to get full parades in rural areas.

In the past year, more and more weapons have been issued to the Home Guard, at least one of which is still on the secret list, and as the Regular Army is given improved weapons, so surplus types are released for the Home Guard, and further powerful anti-tank weapons are amongst the latest to reach us.



Unfortunately, the extra weapons coincided with such a strict concentration on battle drill and battlecraft that the men had difficulty in mastering their new weapons; some even forgot their old ones. This tendency has been aggravated by the fact that the Home Guard is in a permanent state of flux as far as its personnel is concerned. It is true that the factory units and agricultural units are not affected in the same way. But the average town battalion in the Home Guard may lose 400 to 500 trained or semi-trained men a year, who are replaced by raw recruits—either youths or older men who had avoided Home Guard service.

This avoidance can be caused either by sheer lack of patriotism or, more usually, by the fact that the man's working hours are so long that he genuinely did not feel that he could give his best on parade. This factor has been disregarded, in many cases incorrectly, by the Ministry of Labour, with the result that Home Guard instructors find an increasing number of men on their hands whose hours of attendance per month are far too few to enable them to be trained up to a satisfactory standard.

Quite frankly, I do not think that the average Home Guard in a General Service (Infantry) unit is as efficient or as keen as he was two years ago, in spite of, or because of, the extra weapons and subjects which he has to learn. Map-reading, for example, ought to be absolutely unnecessary for a Home Guard in a town battalion to learn. It is his business to know the whole of his area like the back of his hand, and therefore he should not need to use a map at all.

It is platitudinous to recall that every Home Guard is now nearly four years older than he was in 1940. The older men are liable to get varicose veins from the stiff leather gaiters which they wear on parade. They are working harder during the day than ever before, because more and more youngsters are directed to the Forces, leaving more and more work for the more elderly survivors. It is gratifying, of course, for the sergeant-instructors to realise that if they do their job properly they can see to it that the youngsters who are called up into the Army from the Home Guard are at least partially trained and have a sound knowledge of such simple weapons as the rifle, bayonet, Sten, 36 grenade, and so on. But they themselves are much less fit than in 1940, as I saw recently when men of my own company were going through the gas compound. Two minutes of D.M. gas had a definitely deleterious effect on some of the older men, who were racked with coughing, vomited, and in some cases actually had to have smelling-salts.

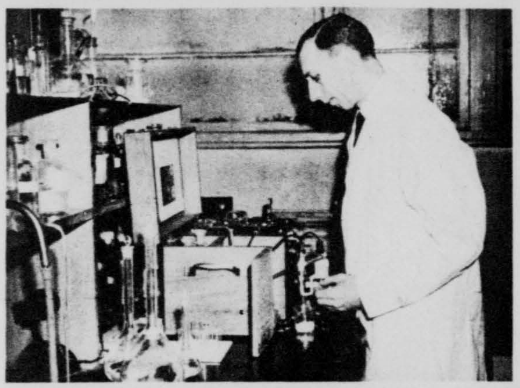
That is one side of the picture. The other is the Ack-Ack units of the Home Guard which have been given a super-priority recently, in contrast to the latest plans for the G.S. units, who are now being trained in light rescue work and suspect that they are to be brought down to the level of the A.R.P. Major-General Lord Bridgeman, the Director-General of the Home Guard, has explained this in public quite clearly. He began with the rhetorical question: "Was this war made for the Home Guard or was the Home Guard made for the war?" Lord Bridgeman's argument is that there is logically no difference between the duty of manning A.-A. guns to shoot aeroplanes out of the sky and that of putting out fires caused by bombs which drop from them. Both are necessary for the defence of the country. Both are, therefore, duties in which the Home Guard can fairly be asked to take a hand if the need arises; and once again, it is merely a question of priority and of a realistic attitude to the needs of home defence. In connection with this, Lord Bridgeman emphasised the fact that he avoided calling in the Home Guard until the last minute, for this purpose.

THE HOME GUARD AND THE "Z" BATTERIES: These men operate the secret "rocket projectors" which form an important part of the anti-aircraft defences of Britain (as mentioned by Mr. Graves in his article). All types and all ages go to make up the Home Guard, whose services to the nation since the dark days of Dunkirk have been inestimable. When the Invasion of the Continent takes place, the Home Guard will again be called upon to carry out important duties for which they have been preparing since their enrolment

The Ack-Ack units, in the meantime, are being equipped with modern light A.-A. weapons, including Bofors, as well as 3·7's and the rocket guns with which the Home Guard anti-aircraft batteries were and still are equipped.

For the "Z" batteries, as we all know, have at last been "released." I understand that General Sir Frederick Pile had wanted long ago to have the "stop" removed from the rocket guns. But the vetoing was on a very high level indeed, and it was not until the Germans had talked at great length about their rocket installations in the Pas de Calais area that the ban was lifted in this country about our "devices."

This will certainly have improved the morale of the Home Guard who operate them. It was in 1941 that the first attempt to man these rocket batteries with Home Guards was made—at Liverpool. For certain reasons, nothing to do with the technical side of it, this did not prove a success. By June 1942, however, volunteers for Ack-Ack work were hastening to the new batteries. Many of them were gunners of the last war who were expecting to meet weapons to which they were accustomed. Their original chagrin was acute, but they were quickly to discover the death-dealing possibilities of the new "devices," as they were officially called. There was only one fly in the ointment—they were not allowed to wear the badge of the Royal Artillery, nor to use gunner ranks, such as bombardier.



Owing to their civil occupations, the Home Guard Ack-Ack gunners employed on these "Z" batteries do only one manning night in eight days, but their keenness and intensive training make up for their lack of practice.

To-day, in view of the hard work in handling the projectiles, the enlistment of Home Guards to the Ack-Ack batteries from the General Service (Infantry) units is confined to men between the ages of twenty-five and forty-one. Which means that the G.S. units now consist largely of men under twenty-five, middle-aged men, and Home Guards who are not mentally or physically fit enough to pass the medical examination necessary for their acceptance in the Ack-Ack units. The only exceptions to this rule are men whose hours of work are such that they cannot man the batteries one night in eight. It is only natural, of course, that the Home Guard directorate should take these steps and skim the cream of the Home Guard for what seems to be the only way in which the men are likely to look the Germans in the face—in action against the *Luftwaffe*. But it is discouraging for the officers and senior N.C.O.s of the G.S. units who have trained so hard for so long.

There is no doubt that hard training under capable Army instructors has raised the level of the Home Guard Ack-Ack to a high pitch of efficiency. There is no doubt, too, that apart from their success in helping to shoot down enemy aircraft at night, they would give a very warm reception to any enemy aeroplanes which attempted to dive-bomb or machine-gun any of the factories and other strategic points where these batteries of light anti-aircraft guns are located, and in this way the Home Guard will be performing an invaluable job in the event of invasion. I repeat, however, that the general impression of the Infantry units is that their chances of real active service even in the event of invasion have largely dwindled; and they think that they would for the most part be used, at the maximum, as lines-of-communication troops, but more probably for civil defence.

No doubt this impression is erroneous, but it is general enough as to have quenched some of the old bright enthusiasm of the volunteer days when invasion seemed a certainty.

HOME NEWS-ITEMS in PICTURES

"H 11," THE PAINLESS TREATMENT WHICH HAS BROUGHT NEW HOPE TO CANCER VICTIMS: Mr. James Henry Thompson, who is responsible for its development, at work in his laboratory at Sunbury-on-Thames. "H 11"—a painless treatment which is said to ensure a fifty-fifty chance of regained health to cancer sufferers—is being used in hospitals and by doctors in Britain. The treatment usually takes six months or more, and is given by subcutaneous injections every day. The scientist who developed it is Mr. James Henry Thompson, a native of Liverpool, who took his science degree at Liverpool University twenty-three years ago. To-day he is Director of Research at Hosa Laboratories, Sunbury-on-Thames, and lecturer at King's College, London University. In 1931 he won the £500-a-year Melchett Research Scholarship

SPUN GLASS: Factory girls handling the threads of glass cotton-wool. There are only three factories in Britain making this material to-day: it is used for vital war work—principally for the insulating of battleships—as it never changes temperature in severe cold or tropic heat. The factory at Darlington (where this picture was taken) is working at full pressure, "spinning" the glass out of medicine, scent, and other bottles. A 1-lb. jelly jar makes miles of this thin, cotton-like thread, which is then woven into blankets for aircraft and battleship insulation. It is hoped after the war to use this fine material for curtains, sheets, and even clothes. The glass is first melted and then passed as a hairlike thread to huge drums. When finished, it looks and feels like cotton-wool, so fine are the threads into which the glass is converted

THE WEDDING IN LONDON OF KING PETER OF YUGOSLAVIA AND PRINCESS ALEXANDRA OF GREECE: The bridal couple at the Yugoslav Embassy just after the marriage ceremony. King Peter is twenty years of age; Princess Alexandra is twenty-three. They were married last week at the Embassy in Upper Grosvenor Street, with our own King acting as "Koum," or best man. All the royalties at present in London (except King Peter's mother, Queen Marie of Yugoslavia, who was unable to attend owing to illness) were guests at the ceremony. The bride was dressed in an oyster satin wedding-gown, with old lace over her hair and a sprig of flowers, in the Greek Orthodox custom. King Peter wore the uniform of a Lieutenant-Colonel of the Yugoslav Air Force

AN AMUSING COMMENTARY ON CONDITIONS IN EIRE TO-DAY—one horse-power through the streets of Wexford. Mr. W. Malone is a greengrocer in the provincial Irish town of Wexford. Eire has been heavily hit by the petrol shortage: hence Mr. Malone has converted his Austin car into a 1-h.p. cart, and makes his delivery in the manner shown above—a real horse supplying the horse-power. Note the closed-down filling-station by the roadside on the left

THE VILLAGE POSTWOMAN OF COCKERHAM, LANCASHIRE, *now seventy-one* years of age but still working. When Jane Preston was a girl she did not want to become a milkmaid; so she took on the job of village postwoman "till something better turned up." That was fifty years ago. To-day, at seventy-one, she has walked a total of 150,000 miles: every day, for six days a week, she trudges from nine to eleven miles over her round. The first three miles are along a rough road on the edge of the salt marshes of Morecambe Bay. When the wind howls across the flats the going is very strenuous indeed. Nevertheless, Jane Preston has only had three weeks off duty in all her fifty years as postwoman: she is not thinking of retiring until after the war

The World of Books—By Vernon Fane

STORIES OF THRILLS AND ADVENTURE

Political Excitement in Wartime Crete; A Chelsea Back-street Story; Two Masterly Simenons; Peter Cheyney's Bibulous Mr. Callaghan; A Plot to Kill Hitler

ONE of the best parlour games (Adults, for the use of) has always been for one member of the party to quote a passage of prose or verse and for the others to try to identify it. This is not necessarily as forbidding or as erudite a pastime as it sounds, and it is most entertaining when the players pick bits of whose derivation one is quite, quite certain—and quite, quite wrong. For instance, Mr. Hemingway did *not* write:

"It would be too much. Understanding this. For myself, no."

"A hell of a time for scruples," Burke said.

"It would be against myself. What do you expect?"

"I don't know. But we're on the spot."

"I do not follow."

"He says we are desperate," Stone explained to Nisus. Then to Burke. "It is nothing to us. But I understand how he feels about it. He can't go back and take another. Anyway, they'll be watching that place closely now."

"No. But it's us staying here, or taking a boat from someone."

"There are other means."

"Name them," Burke said.

It is an extract from a novel by Mr. James Aldridge, a writer whose style owes much to that successful American. **THE SEA EAGLE** (Joseph. 8s. 6d.) is first and foremost an adventure story, taking place in wartime Crete. Briefly, two Australians, left behind after the evacuation of the island, join up with Greek anti-Metaxists, and after helping them to rescue their prisoners, are provided with a boat in which to sail to Egypt. Such condensation gives no idea of the story's occasional poignancy or of the undoubtedly controversial political element. Though it has none of the romantic interest of the author's previous *Signed with Their Honour*, it is still a story which I recommend to you; a story which is far better than its dialogue.

Mr. William Kean Seymour has written an accomplished first novel in **THE LITTLE CAGES** (Hale. 8s. 6d.). It is a cross-section of the lives of a family living in Chelsea in poor conditions before the war. The children are grown up and married or occupied with less successful love-affairs. The mother is a working-class woman of sixty, who has daily work as a charwoman which helps to keep her and her invalid husband.

Each member of the family is shown as imprisoned in the cages created by class, circumstance, youth, age, idealism and disillusion. One daughter is married to a worthless creature with whom she lives in noisy squalor. When he deserts her, she brings her three children back to her parents' little home. Another daughter, who is a smart, good-looking barmaid, falls tragically in love, and has a baby by a young man who refuses to marry her, although his parents provide for her financially.

The son's problem is the same situation reversed; he is a weak, bookish young man of Socialist convictions, and falls in love well out of his social depth. When he learns the girl's contempt for the married state, he is deeply shocked, and they part for a time, only to resume their relationship later. In all this, as you will see, the agony is piled on pretty thickly, and the half-happy solutions to each little tragedy are never entirely satisfactory.

Partly because of this aspect, which is, after all, faithful to many lives, this is an honest and sincerely conceived novel.

This week's three contributions to detective science—or four, if you count Simenon in for his usual couple—are far above the average. First of all, there is that masterly French writer's **ON THE DANGER LINE** (Routledge. 8s. 6d.), which, following his formula, or his publisher's, contains two short but complete novels. M. Simenon abandoned some volumes since the detective-versus-suspect technique, and now concentrates on character and environment, whether blameless or guilty. The first of these stories is of a young man at whom his criminal associates hurl the worst epithet, that of "amateur," and who returns nostalgicly to the home town he had left twenty years before. Without much conviction, he pursues his business of confidence man and seller of bogus emeralds, but his real interest is in the little provincial town itself. He has wandered in and out of jobs, and in and out of prison, over half the world, but in this small provincial centre he finds the only existence that he completely understands.

In a desultory way, he earns a few thousand francs from jealous wives and old aunts, until he achieves the more solid comforts by marrying his astigmatic childhood sweetheart, the daughter of the local bootshop-keeper. He has no affection for her. This he reserves for the little slut who has followed him to the town, and it is in a fit of jealousy over her that he kills a man, and the story ends in violence and tragedy.

The second story in the book is of a complex creature, a kind of humane terrorist, who risks his life in order to prevent the accomplishment of one of his society's plots. To me, this story was not as satisfactory as the first, possibly because the phase of anarchism which it represents is now made pallid by greater outrages. Possibly, too, because it recalls an earlier and more genuinely exciting Simenon story.

In spite of which Simenon retains his lead in his own excellent field, and is still inimitable and a collector's treasure.

Some altruist should write to Callaghan Investigations about the state of their staff's stomachs. In every successive and eagerly-awaited novel of Peter Cheyney's, I read with awe and reluctant admiration not only of the incredible amounts of alcohol which Mr. Callaghan and his sub-sleuth Nickolls consume, but of the godless hours at which they arrange these drinking bouts. Mr. Callaghan, for instance, will embark with relish on a breakfast to which strong tea is only the appetiser for half a bottle of rye. As a meal, tea doesn't exist for him, and four fingers of Scotch are accounted an aid to celebration in the early hours of the morning. Neither he nor his leather-lined friend ever suffer from any physical effects, and that is only one of the admirable but incomprehensible things in their exploits.

THEY NEVER SAY WHEN (Collins. 8s. 6d.) displays these old pals, one elegant and brainy, one shapeless but faithful, at their tough best.

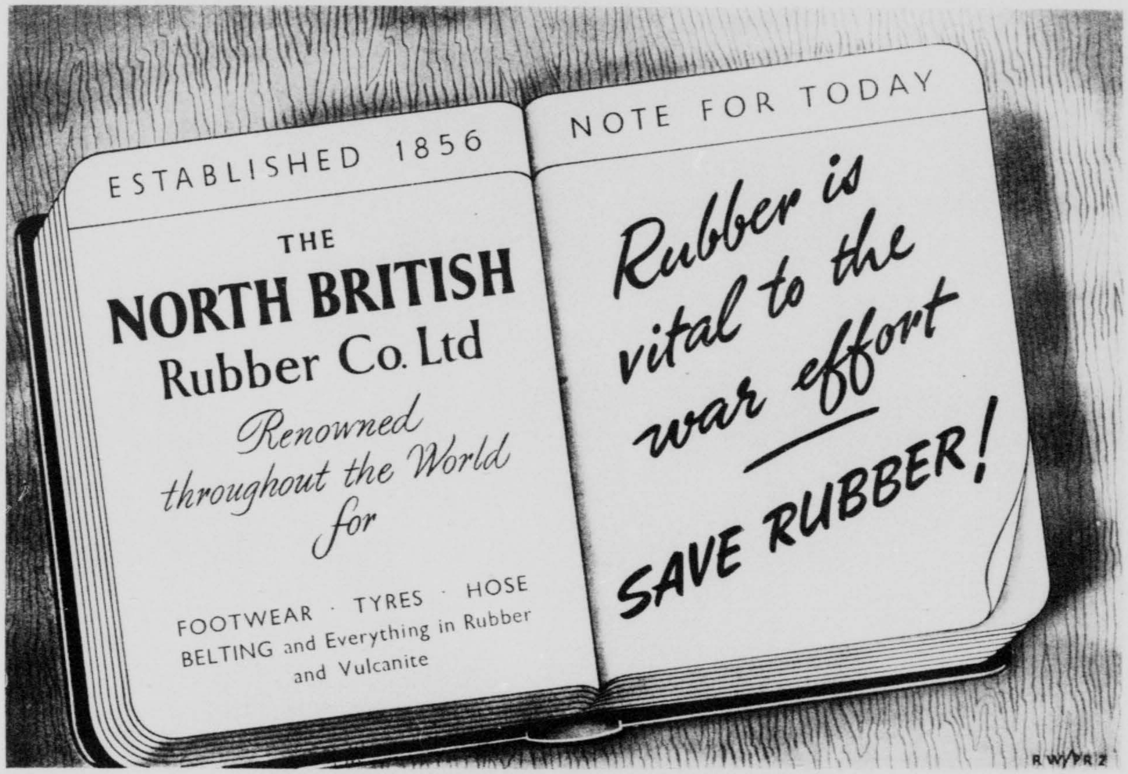
"In this ladies differ,
Essentially from men,
For they seldom say yes
And they never say when!"

So carols Mr. Cheyney, and so behave the ladies of his invention. For the ladies (or dames) of Mr. Cheyney's books play a more important part than was ever recognised by Conan Doyle or Edgar Wallace. They slink and they cavort and they drive powerful cars, and their clothes, which the author describes in the greatest detail, are faultlessly becoming. But none of Mr. Cheyney's heroes ever fall for them in a big—or matrimonial—way. It is strictly business with those guys, and if business happens to go along with a little fun and a lot of drinking—why, so much the better! As usual with this writer's work, there is a plot elaborate enough to fill the space of four sub-plots, and there is a very satisfactory conclusion. As usual, again, I enjoyed it all immensely, and recommend it to other readers for the same reason.

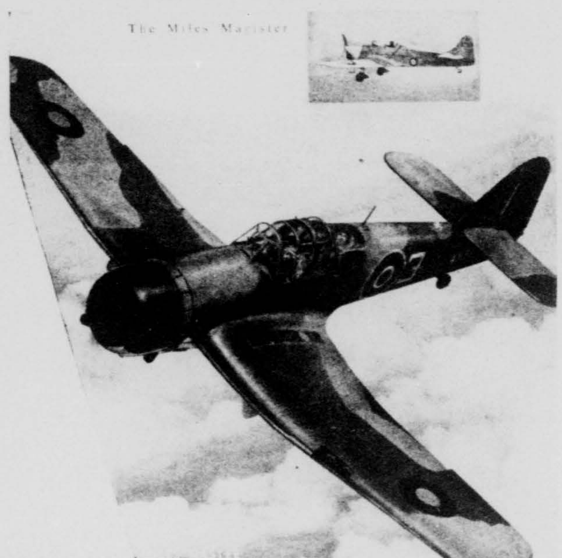
Mr. F. L. Green's intelligent thriller, **ON THE EDGE OF THE SEA** (Joseph. 9s. 6d.), is concerned with a London business man who becomes involved in a plot to kill Hitler. The story has nothing to do with trials of war criminals or post-war planning of a more than usually practical nature; for the period is June 1939, and the excellent scheme is intended to have a major effect on the coming war.

On a trip to Germany Foss, partner in a London export firm, is invited by von Pless, his Berlin sub-agent, and a member of an anti-Nazi movement, to take part in a plot to assassinate the moustached one. The plot is simple and apparently as water-tight as such things can be. Foss is to send a man out from England to do the job with the Movement's help, and Foss is to be paid £15,000 for his services. Foss can't resist this money, and arranges for a killer to be ready to leave for Germany at a moment's notice. All the details are to be fixed at the other end by von Pless, who is sending a messenger, one Rennenberg, to communicate them.

When this further accomplice arrives, it is evident that there is some mystery about him, and eventually he turns out to be a Gestapo officer. It is from this point that the author's indulgence in complication and intrigue begins to affect what is essentially an exciting story. Mr. Green's story-telling is indeed excellent, but, although he is to be praised for leaving no loose ends in his construction, it might also be asserted that he ties those ends up in too elaborate knots. His great talent is for extracting thrills from situations and for controlling suspense with the greatest effect. It's ingenious and worth reading. Not even the fact that it's indirectly concerned with Mr. Schickelgruber should spoil your pleasure.



A NEW BABY LLAMA ARRIVES AT THE ZOO: A male baby Peruvian llama has just been born at the London Zoo. It is a big calf standing over 2 ft. high and weighing 15 lb. It is distinguished by unusually handsome markings, with a white body and black head and tail. The mother is Dolly, a Whipsnade-born animal, who had previously presented the Zoo with four calves



THE FIRST BABY GIBBON TO BE BORN AT THE ZOO FOR YEARS: A concolor gibbon, one of a pair living in the outdoor gibbons' cage on the main lawn, now has a baby. The parents came from Indo-China in 1936: their baby is the first to be born in London for many years. These gibbons are famed for their agility, grace and amusing antics—but they can also bite!

IN QUEST OF GOOD HOTELS

ADVICE BY ASHLEY COURTENAY

Letters, accompanied by a stamped, addressed envelope for reply, should be addressed to him c/o The Editor, THE SPHERE, *Commonwealth House, 1, New Oxford Street, London, W.C.1*

BOURNE HALL HOTEL, BOURNEMOUTH

Offers shops, scenery and plenty of sunshine. Provides admirable quarters in a central position. Bridge, Billiards, Warmth and plenty of breathing-space. From 5 gns. per week. *Resident Directors:* Mr. and Mrs. R. J. Bray.

THE NORFOLK HOTEL
BOURNEMOUTH

Here the policy in wartime as in peace has never wavered. To guard zealously their reputation of being known as "One of Britain's finest hotels." Telephones—Number 7272—every room. Active Proprietors: Mr. and Mrs. F. J. McInnes.

WALDRONHYRST, SOUTH CROYDON

A residential hotel which provides safety and satisfaction, within ½ hour of West End. But "seeing is believing." 'Phone CROydon 2641, and arrange to view the 40 rooms and the 6 acres of grounds. Terms from 4 gns.

CREST HOTEL, CROWBOROUGH, SUSSEX

"A wee bit of Scotland in Sussex." Under the personal direction of Mrs. Eglinton Adams. A fully-equipped first-class Hotel with nearby Golf and Riding. Cocktail Lounge. All-weather Tennis Court. Lift. Central heating throughout.

BRAMLEY GRANGE HOTEL, Near GUILDFORD SURREY

A high standard of war-time catering and comfort. 18-hole Golf Course adjoining. Ideal riding and walking country. Bicycles and pony trap for hire. Excellent bus and train services. Fully licensed. From 7 gns. Tel.: Bramley 2295.

THE RED HOUSE
LEATHERHEAD

Always very popular amongst Business and Retired people because of its accessibility to Town and its comforts. Vacant rooms are few and far between, but they are worth waiting for. Tel.: 2271.

MOOR HALL HOTEL & COUNTRY CLUB
NINFIELD, Sussex

Here, 250 ft. up, facing due south, you can get a break from war routine. Fresh produce from our own farm and gardens. Riding, fishing and rough shooting. Trains met Crowhurst, Battle, or Bexhill. From 5 gns. Tel.: Ninfield 310.

HEADLAND HOTEL
TORQUAY

Though often full, it is an hotel to make a note of should you wish to enjoy quiet luxury midst peaceful surroundings. The Management will welcome advance enquiries.

THE SPA HOTEL, ROYAL TUNBRIDGE WELLS

And here is peace. The hotel faces the sun and the South. It stands in a sheltered, health-giving position in 60 acres of park land, immune from all traffic noises; admirably adapted for long period stays. A FEW GOOD ROOMS AVAILABLE FOR SPRING RESIDENCE. From 7½ gns. Tun. Wells 1911.

THE OLD HOUSE HOTEL
WINDSOR

There are occasional bedroom vacancies and always a chance of good food and good wine if you will but 'phone beforehand Windsor 1154. Luncheons 5s. Dinners 5s. and 2s. 6d. House charge.

The
WIDOW'S MITE
how little yet how much it is!

It takes many drops of water to make an ocean . . . many grains of sand to make the land . . . Yet every drop or every grain is as essential as all the rest . . .

If every reader of this journal gave but THREEPENCE each to the Funds of The Royal Cancer Hospital how grand a total in the aggregate we would receive. And how gratefully! For the war-time costs of research and treatment and equipment strain our purse to its limits. Yet without modern apparatus, the alleviation of suffering from Cancer could not proceed, nor progress be made towards eventual eradication of this malignant disease.

Please do not think that because your gift must be small, it is not worth the giving. Added to others it will be just as much appreciated as the rest.

The Royal Cancer Hospital
(FREE)
FULHAM ROAD, LONDON, S.W.3

"Little Tommy Tucker sings for his supper"

Poor Tommy! It was an uncertain way of finding a meal. But many of our little Tommies and Tomasinas were just as supperless until they found a safe home with us. Now **we** have to sing for **their** suppers. 6,300 suppers every evening! 10/- will provide Tommy's supper for a month.

WILL YOU HELP?

Any help (however small) gratefully received by the Secretary, W. R. Vaughan, O.B.E., Church of England WAIFS & STRAYS SOCIETY, JOEL STREET, PINNER, Middlesex, England.

Bankers: Barclays Bank Ltd., Kennington, S.E.11

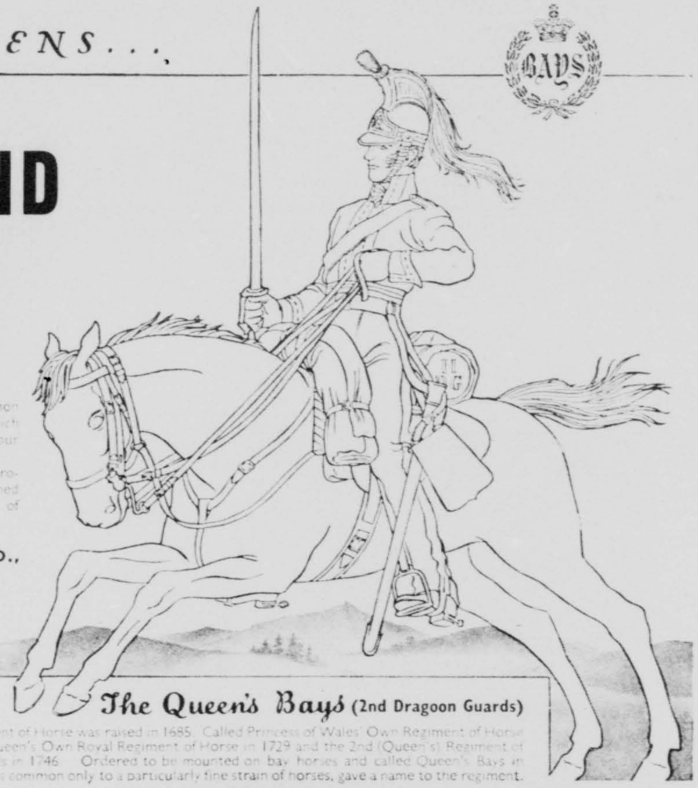
FAMOUS QUEENS...

HIGHLAND QUEEN



GRAND LIQUEUR SCOTCH WHISKY

owes its distinction to qualities common only to the very fine whiskies of which it is blended—mellowness and flavour induced by age.

These exceptional whiskies are the product of long-established distilleries owned and controlled by the proprietors of "HIGHLAND QUEEN."

MACDONALD & MUIR LTD., LEITH, EDINBURGH.

Distilleries:
Glen Moray, Glenlivet, Morayshire, and Glenmorangie, Ross-shire.

The Queen's Bays (2nd Dragoon Guards)

The 3rd Regiment of Horse was raised in 1685. Called Princess of Wales' Own Regiment of Horse in 1715; the Queen's Own Royal Regiment of Horse in 1729 and the 2nd (Queen's) Regiment of Dragoon Guards in 1746. Ordered to be mounted on bay horses and called Queen's Bays in 1767. Qualities common only to a particularly fine strain of horses, gave a name to the regiment.

CANDIDATE for SIMMONDS

Portrait of a young man discovering early in life that you can't put the clock back. Never mind! It was a poor clock anyway. When the hands said 4.25 the time was roughly a quarter to six. Not good enough for this lad. He took it to bits to find out why.

This is the kind of boy who'll be coming to us in a few years for a job — and he's likely to get one.

His technique is a bit clumsy but he has the right idea. We, too, spend a good deal of thought on slow and unsatisfactory processes in industry. We like to take the thing to bits, and see why it's made that way, and how to save lost time. And if speeding up means scrapping the clock and designing a new one, well, Simmonds have done that in more than one instance.

Are you losing time anywhere? Then you might let us "have a go" at the problem.

The Empire's Illustrated Weekly

THREE PRIME MINISTERS AT NO. 10, DOWNING STREET: MR. WINSTON CHURCHILL WITH MR. MACKENZIE KING, PRIME MINISTER OF CANADA (ON LEFT), AND MR. PETER FRASER, PRIME MINISTER OF NEW ZEALAND. They were the first of the five Dominions Prime Ministers to arrive in this country for the first Imperial Conference of the war, which began on Monday last

There are now six Premiers in London, gathered here for the Imperial Conference which will mark a new stage in Commonwealth relations. Apart from Mr. Winston Churchill, the Premiers have come from the farthest ends of the earth: Mr. Peter Fraser from New Zealand, Mr. John Curtin from Australia, Field-Marshal Smuts from South Africa, Mr. Mackenzie King from Canada, and Sir Godfrey Huggins from Southern Rhodesia. All arrived in this country by air and within a few days of each other. On Monday last all gathered at one table, with Mr. Churchill at their head, for the opening of the long expected Conference, which begins as a Council of War: it may last for some weeks, during which time the Premiers will sit together in the War Cabinet for the first time. It is seven years since the Prime Ministers of the Commonwealth met together—in 1937: but that was long before the outbreak of war. On Friday of last week, April 28, Mr. Mackenzie King and Mr. Peter Fraser called on Mr. Churchill at No. 10. when the above picture was taken (*see also page 163 of this issue*)

A WAR NEWSLETTER —No. 244

1, New Oxford Street, W.C.1

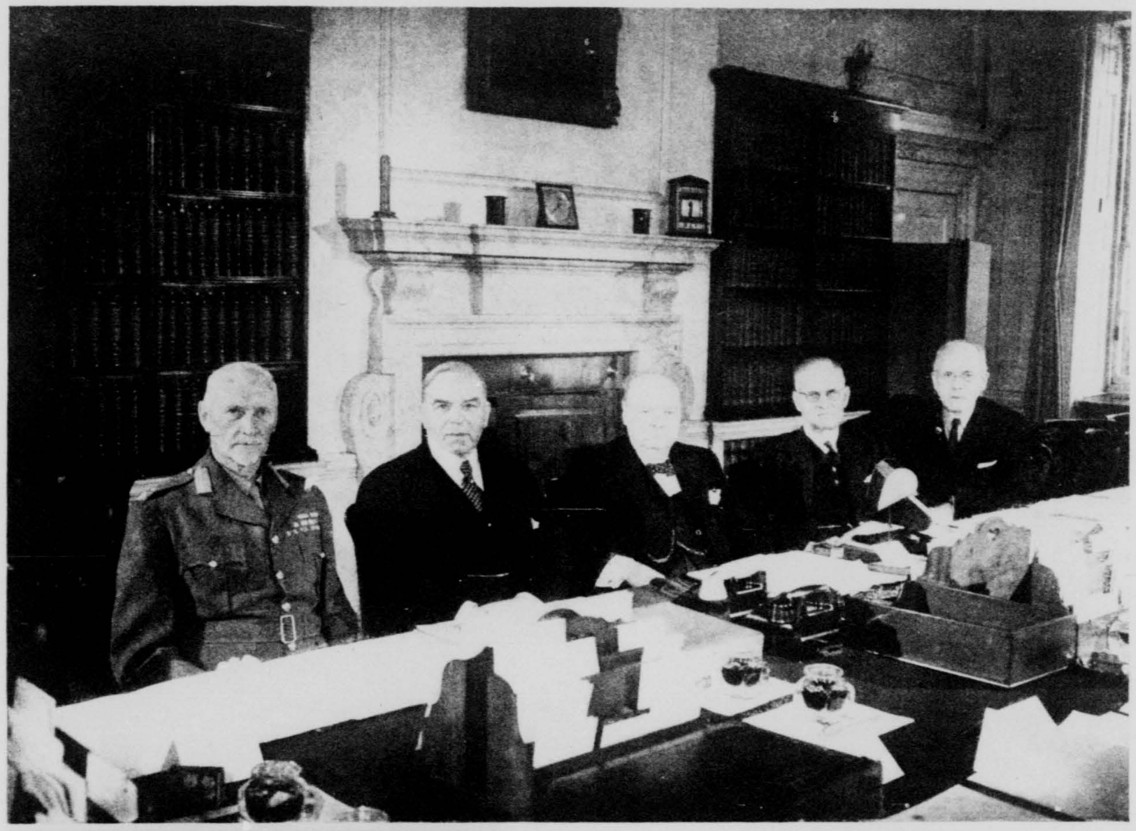
The Lull.—At the moment of writing, there is a lull. The guns of Moscow are silent, the Red Armies are coiling for new springs forward. Italy remains chiefly in the political news. In the west, the softening process proceeds like a familiar routine, and the punctual statistics of blasting from the air are "taken as read," like the annual report of a dividend-paying company which never gives any trouble to shareholders. But under the surface the pot simmers—everywhere. Though General Montgomery finds time to watch football, though critics review new plays, books, pictures and art shows, though a few cricket grounds are cut and rolled, and the spring shrubs and flowers burst into blossom, and farms and gardens are tended, the pot simmers and bubbles, and the lull is not very easy, even in Britain. It is contagious. It has affected the day's mail. Fewer letters are written, fewer bills paid, fewer plans made, fewer movements observed; possibly even there is less talk than usual. And if in Britain the pot simmers, what is it like below the surface in occupied Europe, or in Germany? The phoney war had a disintegrating effect on the nations involved. The Second Front war of nerves, we may suppose, may well be not less shattering to tense nerves than the rain of 8,000-pounders. The curtain will soon go up on the new tragedy in blank verse, and the actors are all dressed up and waiting in the wings. We await the sound of the tapping by the conductor's baton. I think we shall welcome the sound.

Budget.—The "mixture as before" was in all circumstances the best tonic we could expect from Dr. Anderson and we are grateful. We shake the bottle and drink the nasty stuff down every day, hoping it will make us better. A brighter gleam was the post-war prospect of a fairer form of motor-car tax, based, I hope, on petrol used and not on horse-power. I noted the warning about inflation. It concerns us all very closely. I think the warning signal already has gone up. I vaguely comprehend how the rise in wages puts up the price of goods produced and leads to inflation. But I am a child in these high, financial and economic matters; I always long to cry out: "O, Sir, please, Sir," and ask my silly question. It is this. We hear that wages have risen by so much per cent and private incomes by so much. I want to ask: "*Whose wages?* Not mine, Sir." I want to ask the silly question: what is the position of the thousands of pre-war employers of labour who find the ceiling demands and the approved wages of their former types of employees all immensely higher, while their own incomes are largely reduced? In short, what is the fate of all those hundreds of thousands of wage-earners whose wages are less, not more, and whose incomes have had no share in making the new average of splendidly enhanced earnings? For them, for us, inflation already is not a danger, but a *fact*, and a very unpleasant one. The answer, I suppose, lies in this argument: "Unless you are an industrialist of an essential category, you stew in your own juice. You do not matter to the State. You may hope to benefit some day in some degree by the returning prosperity of the exporters and agriculturists whose prime job of putting Britain on her legs again it will be the State's first task to encourage. Meanwhile, your portion will be patience in hardship, and for many post-war years 'the mixture as before.'"

A Nation of Shopkeepers.—For the first decade of peace, it is clear enough (and wise and right enough and inexorably logical) that we must be a nation of industrious shopkeepers with a vengeance. And it will be the task of every Government we may have to see to it that we *are*, by encouragement applied with carrots before and a stick behind. The arts of peace, the culture of security, except in so far as these can be applied to the dressing of our shop windows and the greater attractiveness of our exportable manufactures in industry, must blush unseen and grow in a cold frame. The architect may hope, and perhaps the music-hall artist—for these arts directly benefit the welfare of the essential industrialist. But, for the rest, that quiet, care-free security which scientific researchers may expect, is not on the map of the future. You cannot paint pictures, write books, compose symphonies, if your day is mortgaged to washing plates, cooking meals, sifting cinders, digging potato patches. And which of these artists, once renowned, can hope to find, to pay, to keep, a cook or a general, or a part-time help, under the post-war standards of pay and conditions which the post-war reserves of domestic labour will demand as a right? Or to employ a gardener or handyman at £4 a week with free cottage and perks? Very few. The new effort to improve national education and culture must, by the force of economic necessity, proceed *pari passu* with a steady decline in the national culture which depends on the flourishing of the Arts of Peace. Which is a pity, an unavoidable misfortune.

A Parliamentary Novelty.—You and I, plain John Citizens, are told no secrets brewing in Whitehall. We must get our notions of the shape of things to come by reading between the lines or peeping under the flap of the Big Top. We must watch straws in the wind. Of late I have thus got hints that both Parliament and the B.B.C. may yet take a hand in fostering the great post-war ideal to make Britain in very deed a nation of shopkeepers. I do not rule out that, soon after the war ends, the B.B.C. will succumb to carrying trade advertisements, and that voices in Parliament will "slip in," if not unashamedly recommend, new gadgets and patent pills to the public. That reference to the honing of razor blades recently made was a tremendous trifle, a significant pointer, a straw in the wind. It was not *hapax legomenon* neither. There have of late been other signs and portents that the dignity of Parliament may be further stretched to commercial ends.

Theory and Practice in Planning.—I delight in all the pretty architectural pictures of replanned London and replanned Auburn. The St. Paul's Piazza and the sunk garden at Piccadilly Circus are as convincing and attractive as is the residential square of labour-saving cottages, each embowered in its blossoming orchard, designed to replace the damp and crumbling hovels in present-day Auburn. There can be no progress without dreams, no brass-tacks without theory, no works without faith. But theory and practice are all too often at variance and all too sharply distinct. I can almost hear the complaints which will issue from the embowered square at Auburn. I note that in all the planning for homes for workers consideration is totally given to the *housewife's* point of view. I have been throughout the war a strong upholder of the housewife, whose labours on the Home Front have done so much to win the war and who can look to no reward but from official dewdrops and consideration in replanning, such as this. The trouble to come (as I see it) in the reconstruction of village life is that the ancient criterions and standards have not (and will not) changed. Still to-day and to-morrow the worker, the man, comes first and the housewife is still the first to admit it. The worker must live close to his work. He (and she) would rather live in a hovel close to his work than in a dream house on a site which requires a bicycle ride to and fro. To get results, in water, light and sewerage, at an economic price you must group your housing schemes and, if you group, you ensure this complaint from half the owners on the estate. Theory marches on, but the bad old notion of pandering to the bread-winner still sticks in Auburn, whether in the matter of Sunday dinner or labour-saving kitchens and running taps.

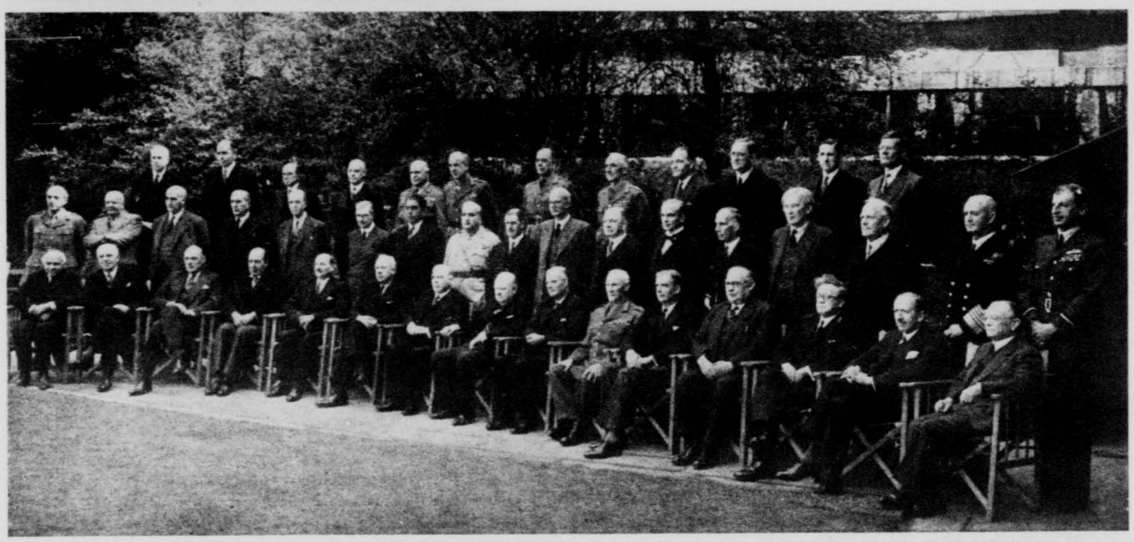


THE MINISTER AND THE MUNITIONS GIRL. Mr. Ernest Bevin recently paid a visit to a war factory, where he was shown round the shops and talked to many of the men and women whom he watched at work. Amongst these was Miss Ruby Loftus, subject of Dame Laura Knight's outstanding picture of a girl factory-worker in last year's Royal Academy. Miss Loftus is one of the most highly-skilled workers in a Welsh Ordnance Factory

Sir Derek Keppel.—Sir Derek Keppel, who served King George V as friend, companion and faithful servant from the King's marriage to his death, outlived his loved master by eight years, and died in his eighties. When the Duke of York married Princess May of Teck in 1893, Sir Derek was the only "household" who attended them in their honeymoon at York Cottage, coming in daily to deal with the vast mass of correspondence. A Norfolk man and neighbour, he had known King George from boyhood, and as the years went by he shared in all the King's pursuits and duties, ever closer and ever more tested in friendship. The King had round him all his life a number of these tested old friends, who shared his memories and jokes and loved his rough chaff. To one and all, he was a master and friend in a million whose faithfulness and straightness were the sunshine of their lives. And among these faithful old friends Sir Derek Keppel stood out for his loyalty, his devotion, his selfless service in many capacities. In his looks, in his manners, in his noble simple, upright character, in his dignity, his grace, his essential kindliness (without which the finest manners are mere technique and hollow), he was the living, walking model of English chivalry and nobility, a figure of which England, in any phase of social evolution, has good cause to be proud. Of all his great qualities, I fancy his loyalty stands out first. No man has ever given a perfect definition of a "gentleman." The clue may lie in the perfect co-ordination and practice of a number of loyalties—loyalties to a man's own convictions of what is right, and to those whom he serves with single-minded, selfless devotion.

A Peerage Trifle.—At this critical hour in human destiny, the trivial still rubs shoulders with the important and helps not only to sharpen the contrasts, but to preserve the balance of the human mind. And so I read with mild interest that Viscount Mamblas, for many years a familiar figure at the Spanish Embassy, in Clubland and in London Society, a friend and sometimes a candid critic of England, a man of very polished manners and of serious mind, is changing his name. He will be known henceforth as the Duke of San Lucar. It is perhaps an odd time to compare the usages of the Spanish and the British peerages. In Spain a nobleman can in his lifetime cede one of his titles to his son or heir, and that title may be of equal rank with his own. Thus the Duke of Alba's daughter is already a Duchess. In the British peerage, the courtesy-title usage is in a sense (usually) the ceding to the eldest son the use by courtesy of a minor title in the peerage concerned, but that title is never of the same rank with the father's. It is usually one degree, but often more degrees, lower. Indeed, I believe the "proud" dukedom of Somerset can offer its heir nothing higher than the barony of Seymour. In England the "cession" is purely a title of courtesy and creates no peerage rights or privileges. Whether such "cession" under Spanish usage turns the recipient into a peer of Spain I do not know. If it be so, the differences in this usage are two, not one. My note, I admit, is somewhat "off the record." In England even sober conservative journals have of late been questioning the fitness of hereditary peerages in the scheme of modern democracy. I should imagine that in Spain the anomaly is not yet so apparent.

THE OLD STAGER



THE DOMINIONS PREMIERS MEET

The Historic Scene at No. 10 Downing Street Recorded by the Camera, as the Four Overseas Statesmen began their Sessions with Mr. Winston Churchill

THE FIRST MEETING OF THE FOUR DOMINIONS PRIME MINISTERS in the Cabinet Room at No. 10, with Mr. Winston Churchill

Field-Marshal Smuts, of South Africa, is seated on the left; Mr. Mackenzie King, of Canada, is on the Premier's right; Mr. John Curtin, of Australia, on his left; and Mr. Peter Fraser, of New Zealand, on the extreme right. This historic camera record was taken at the first meeting of the Empire Prime Ministers on Monday

MR. WINSTON CHURCHILL WITH THE DOMINIONS PREMIERS AND MEMBERS OF THE CABINET in the garden of No. 10 after the first Conference

In this historic picture are the following British and Empire Leaders—from left to right in the first row: Lord Beaverbrook, Lord Woolton, Mr. Lyttelton, Sir John Anderson, Mr Attlee, Mr. Peter Fraser (New Zealand), Mr. Mackenzie King (Canada), Mr. Winston Churchill, Mr. J. Curtin (Australia), Field-Marshal J. Smuts (South Africa), Mr. Anthony Eden, Mr. E. Bevin, Mr. Herbert Morrison, Lord Cranborne and Mr. L. S. Amery. In the second row are: Field-Marshal Sir Alan Brooke, Colonel Denys Reitz, Lord Cherwell, Mr. S. M. Bruce (High Commissioner, Australia), Sir Stafford Cripps, Sir James Grigg Sir Firoz Khan Noon (India), the Maharajah of Kashmir, Sir Godfrey Huggins (Southern Rhodesia), Mr. Oliver Stanley, Mr. A. V. Alexander, Sir Archibald Sinclair, Mr. V. Massey (High Commissioner, Canada), Mr. Brendan Bracken, Mr. Jordan (High Commissioner, New Zealand), Admiral Sir A. Cunningham and Marshal of the Air Force Sir C. Portal. In the back row are: Sir J. Stephenson, Mr. N. Robertson, Sir R. Hopkins, Sir F. Shedden, General Sir T. Blamey, General Stuart, Sir H. Ismay, General Puttick, Mr. Forsyth, Sir E. Machtig, Mr. Mackintosh and Sir E. Bridges

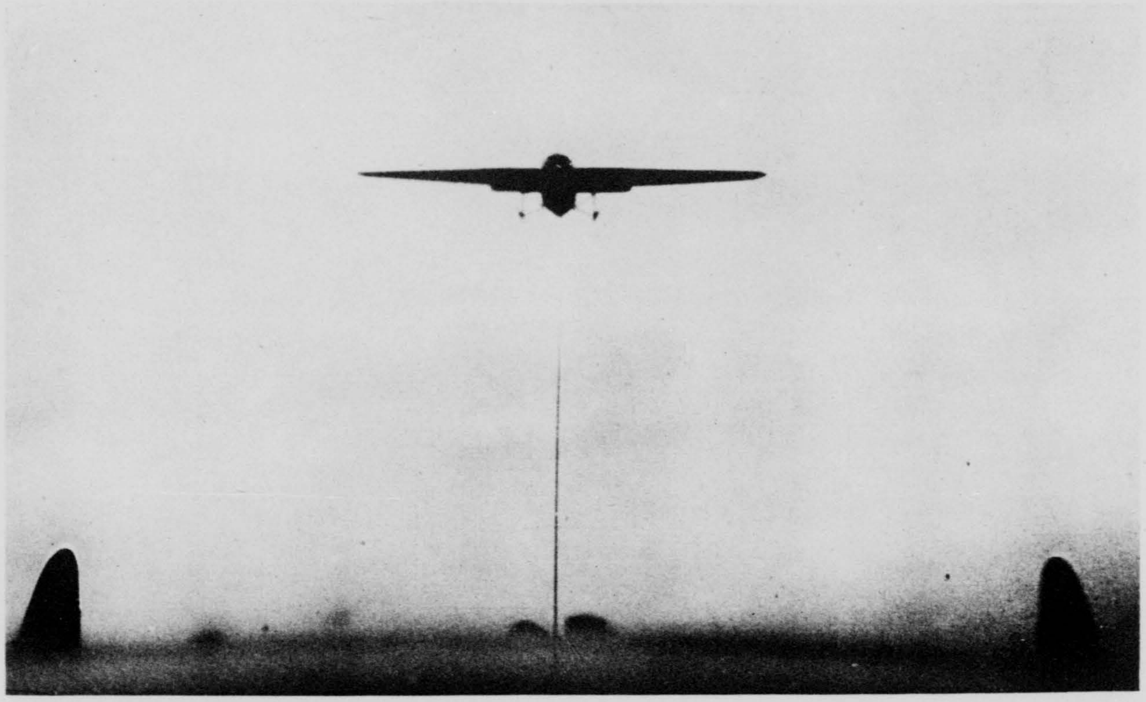
TROOPS FROM THE SKY

Pictures Taken During the Biggest Exercise Yet Carried Out by Airborne Troops in England

Last week airborne troops were employed in one of the biggest exercises yet carried out in this country. Within a space of twenty minutes, scores of gliders landed without a mishap at an English airfield. Guns, ammunition, bicycles and other equipment rained from the skies, whilst on the ground gliders poured out their loads of troops, doctors and stretcher-bearers. The demonstration was part of a large-scale combined operation by the R.A.F. and the British and American Armies. It was watched by Air Chief-Marshal Sir Arthur Tedder, Deputy Supreme Commander of the Allied Expeditionary Forces now gathering in the United Kingdom.

The gliders used (and shown in the pictures reproduced here) were British-made Horsas, which can carry a number of fully-armed soldiers, a jeep or a variety of equipment and supplies. The "tugs" were American Dakotas, as well as British Albemarles. The speed with which the operation was carried out made a great impression on all the observers.

AT THE BEGINNING OF THE EXERCISE: Horsa gliders marshalled into position for moving to the take-off point. These huge, engineless aircraft are British-made: they were towed off the ground by American Dakotas and British Albemarles

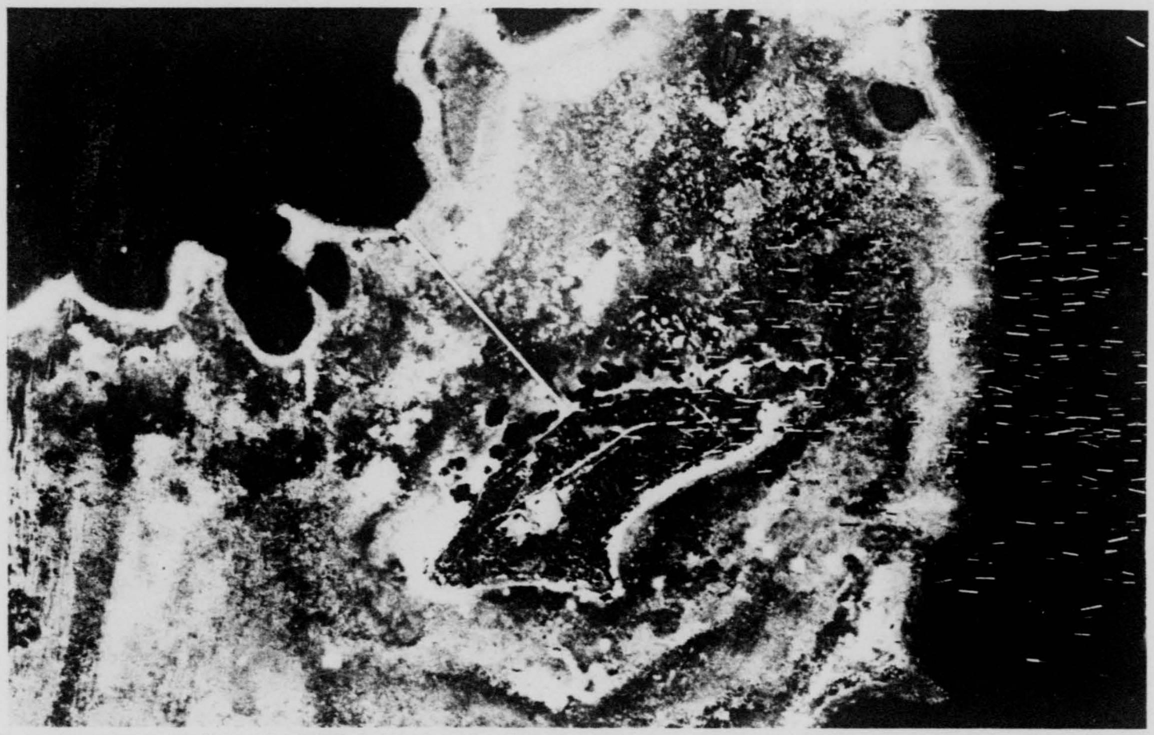


EQUIPMENT CONTAINERS BEING CLIPPED TO THE AIRCRAFT. As soon as the airborne troops land, this material is instantly available for immediate ground operations. Note the bulky overalls of the paratroops covering their parachutes

EN ROUTE TO THE LANDING POINT: A paratroop in the aircraft making the final adjustments to his parachute harness and fixing the safety-clips

THIS PAGE IS DECLASSIFIED IAW EO 13526

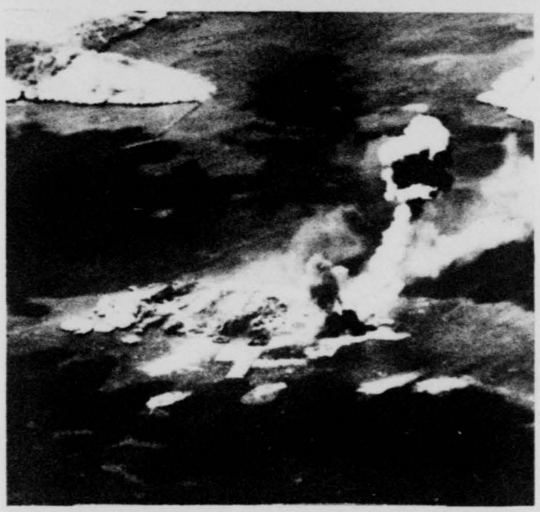
A HORSA GLIDER IN FLIGHT, PHOTOGRAPHED FROM THE TUG AIRCRAFT. The glider always flies higher than the towing plane in order to avoid the slip-stream from the engines of the latter. The tow-rope is long and made of nylon. After it has been cast off, the Horsa glides down to earth to the spot previously indicated to the pilot



IN AN AIRCRAFT DURING THE EXERCISE: The Second-in-Command explains the method of the coming attack to one of the men who will drop by parachute on the "enemy position"

THE OBJECTIVE HAS BEEN REACHED: A paratroop sergeant is waiting to make his jump through the side of the aircraft as soon as the pilot indicates the proper moment

THE COMPLETE AIRBORNE SOLDIER. This man is one of a Motor-cycle Section: both he and his machine have just landed, and he is off at once to make contact with other airborne sections. The light-weight machine he is riding is fitted with a high-speed, two-stroke engine capable of a fair turn of speed: it is suitably geared for rough surfaces and it is light enough to be carried bodily over ditches

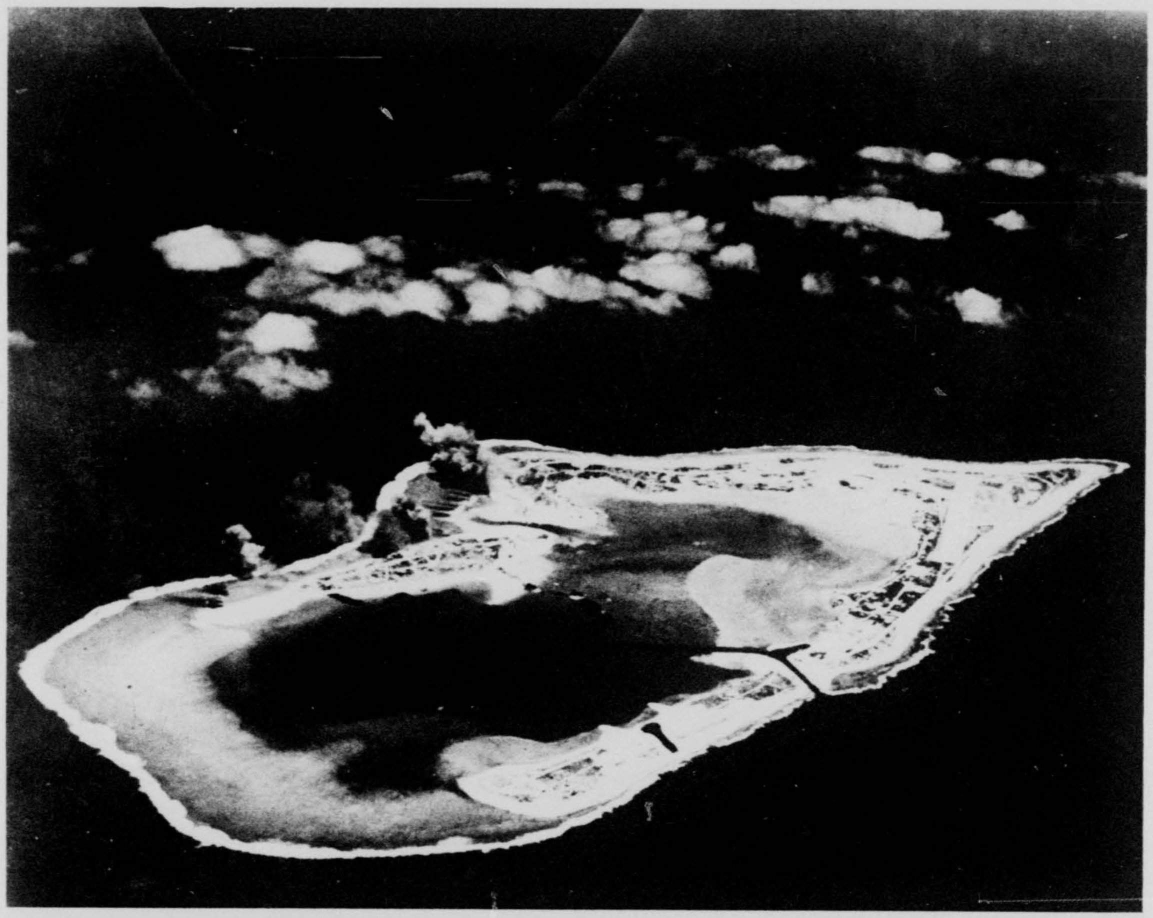


A SHOWER OF FIRE DESCENDS ON THE JAP BASE OF PONAPE, IN THE CAROLINE ISLANDS. The incendiaries are here seen released over the island of Langar, which forms the tip of Ponape: they passed on to hit the city, lying outside the picture to the left. Langar Island itself was attacked later and was left a mass of flames by the American Liberator bombers

Ponape—like Truk—lies in the Eastern Caroline group of islets in the Central Pacific: it is one of the centres of administration of the Jap-mandated group and, like Truk, is one of the principal bases of the Jap forces. Since early in the year it has been the object of unremitting attack from the air by American bombers, both by high explosives and incendiaries. Two of the pictures reproduced on this page show scenes at Ponape during the course of these attacks. The harbour is of considerable importance to the Japs: its installations must have suffered severely

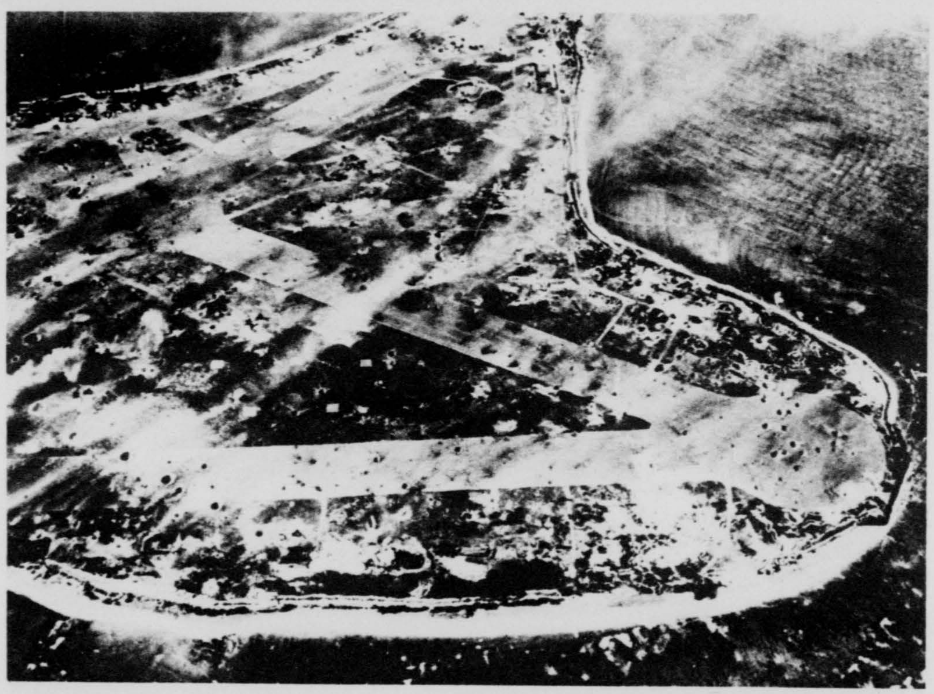
AMONGST the PACIFIC ISLANDS

Where General MacArthur's Air Forces have been Constantly in Action Against the Japs



—Some New and Impressive Aerial Photographs

PONAPE: The Jap ammunition dump on Langar Island, which guards the mouth of Ponape Harbour, goes up in smoke. This was only one of a number of similar attacks carried out on the same objective by Liberators of the Seventh Air Force. In the foreground of the island behind is a heavily damaged seaplane ramp: behind it are a number of burned-out machine shops used by the Japs



HOW THE AMERICAN "TASK FORCE" ENTERED INTO POSSESSION OF THE GREEN ISLANDS. This small group lies off Buka, at the northern end of the Solomon Islands: they command the channel between the Solomons and New Ireland. With their capture on February 14 General MacArthur said, "For all strategic military purposes this concludes the campaign for the Solomons." This pictures was taken as the "task force" cruised through the entrance to the lagoon on the Green Islands in a prelude to the seizure of the Jap base established there: tank landing craft are leading the way, and barrage balloons are flying above the little armada. Only small ground opposition was encountered

A FINE IMPRESSION OF TINY WAKE ISLAND: This Japanese-held islet has been bombed many times by the Americans: the above picture was taken on March 11, when Liberators again returned to the attack. In spite of intensive anti-aircraft fire, all the bombs were on the target. Note the thick plumes of smoke rising from the far side of the island

Wake Island lies about 2,000 miles from Hawaii and Pearl Harbour, on the direct route to Hong Kong. It is a tiny spot, with a big lagoon in its centre, which before the war was an important link in America's communications by air. In all, it has an area of about one square mile. It was annexed by the United States in 1898, and it remained in American possession until December 27, 1941, when it was occupied by the Japs just after Pearl Harbour. It was attacked by American bombers on February 24, 1942, since when it has been a frequent target. The Japs have installed strong anti-aircraft defences on the island; but it is not unlikely that—when the proper moment comes—the Americans will once again enter into possession of this important and strategic speck in the mighty ocean

On right—**AN AIRFIELD IN THE MARSHALLS, now being repaired for American occupation.** The islands of the Kwaialein atoll in the Marshalls group were captured during the period February 1-5, 1944. This picture shows the terrific devastation caused just before the invasion by the air and sea bombardment of the runways of the airfield on Roi Island. Pitted everywhere with craters, it is obvious that no Jap aircraft could have taken off during the critical invasion period. It will now be the task of the "Seabees" (or Construction Battalions) to rebuild this air base for the use of the American forces

HITLER'S "FORTRESS" STILL YIELDS ITS SECRETS

The Fissures in the "Great West Wall" Through Which Come Details of the German Plans and Activities. By FERDINAND TUOHY

IT wasn't long before Hitler replied to the drastic new security measures aimed at sealing up the Allies' Second Front secrets inside Britain. While Denmark was cut off from the outside world, German-controlled Vichy fell upon certain diplomatic pouches leaving for Madrid, Lisbon and Berne; and more with the same end in view is to be expected.

Yet the battle for secrecy cannot turn in favour of the Germans at this late day. No matter what bans and interdicts they have recourse to, the Allies will continue to extract more secrets from Hitler's Continental "Fortress" than the Germans can ever hope to get out of Britain—or Russia either. Conditions inside the "Fortress" render this inevitable, and the Germans are as aware of the fact as anybody else. They have only to observe obvious symptoms around them in order to realise that the British Isles are proof against most, if not all, of them.

Have we not wondered, of late, at the degree of certainty with which communication is now regularly sustained with the Resistance movements, with Revolt in the "Fortress"? At times it sounds almost as if one may drop in on the partisans by appointment; or withdraw from them whom one chooses for reasons of political strategy. Liaison with friends of the United Nations in Occupied Europe is so sure that it must provide a non-stop nightmare for the Nazi security services. Just imagine if, in this dramatic hour, we had to sit back in the knowledge that bitter enemies were passing in and out of Britain, under our noses.

A hunted veteran like the French Tory leader, Louis Marin, can get to England, from Vichy, just when he wants to; and doubtless a mine of useful information the old diehard proved himself to be. Pre-ordained arrivals are even signalled from the relatively far-off Polish Underground. Who shall be wanted to-morrow from the "Fortress"? And who returns thither?

"Stalin has ears everywhere," wrote Goebbels recently. There is another stark prospect for the German General Staff, which knows that it is no exaggeration. The Red Army has paid tribute to its information services, reaching well back into the heart of Europe and reposing now on active partisans, now on sympathisers in enemy-held centres.

One can well imagine the hidden tic-tac services that have been devised across a continent, the smothered passing-on of information from group to group, a kind of drum-telegraphy of the African bush. Nor is it stretching things to picture the working man, forced to labour for Hitler, as time and again in a position to observe matters of military consequence—as the railwayman, keen-minded and hating.

Then there is the growing leakage associated with police, functionaries and Civil Servants nominally collaborating with the Germans. Such people have to be let in a little on the inside, and the Germans know that less and less of them can now be trusted; that more and more are buying their way back to safety by helping their Resistance movements, not least by the supply of first-hand information.

In this kind of war, it is never too late for a rat to mend, of such value can an intelligent rat be, and it is good to see from the latest underground papers how officialdom and the police are being pressed to make the liaison with partisans, the latter so organised as to be in constant touch with the Allies.

As invasion spreads, the Allies will run the risk of their men talking after capture, under tricks, deprivation and for less worthy reasons; but we have no huge numbers of vassals and unwilling conscripts, hundreds of thousands of men only dreaming of how to cross over, and thereafter ready to tell all they know with a will and fervour.

But now take a trip in the mind's eye inside Germany. There you find another cause of constant disquiet in the not-so-secret "Fortress,": the millions of foreign labour-conscripts. Working in war factories and on public utilities when not on the land and on menial duties, these labour-slaves pick up local details which work well into the general mosaic of knowledge of the "Fortress," and there is always an escaping trickle ready to relate everything. This menace to Nazi secrecy is such that notices have gone up, warning Germans "Don't talk with a foreigner. Remember he is your enemy!" A poster warns against "The Shadow" who is listening; the portrayal being of a Tom Walls figure with slouch hat pulled well forward. A British Intelligence officer, it seems, weaving in and out of the foreign workers, collecting what they know!

Fugitives from the Reich gain in value, thanks to what they glean during the weeks and months they often spend in passing from Germany to neutral and Allied territory.

Almost wherever you turn, the "Fortress" has fissures. In a recent order of the day, von Rundstedt spoke of the West Wall as infested with British spies and saboteurs—though whether he implied of British nationality was not clear. We do know that "peep" raids have for long been the rule; Commando units landing in darkness and probing key-points. And Allied air mastery switches on another arc-lamp over the "Fortress," vast areas of the invasion jigsaw having been fitted together by the cameras of reconnaissance aircraft. It is safe to say that for one German spy-plane that ventures over here, ten or more Allied spy-planes dart about above the Continent.

The Germans have been very talkative about their West Wall, and, whether it be done to hoodwink us or to sustain German home morale, silence had been better for them; the silence we kept in 1940 when we had nothing to talk about. The need that Goebbels sees to goad German morale has never been necessary here, least of all in this silent, secret hour; and that, too, contributes to our knowledge of over there.

Then there is the necessity under which Germany labours of keeping in touch with the neutrals or co-belligerents. She cannot afford suddenly to ban travel. Too much of her vital war industry is dependent on these European countries outside the war, and the result is a business *va-et-vient*, with its attendant risks of information seeping out either intentionally or through blabbing. The Germans have taken this matter in hand, but they cannot be sure even of their own nationals once these get outside the hell that is current Germany. German deserters from the sinking ship, both military and civilian, are a growing company.

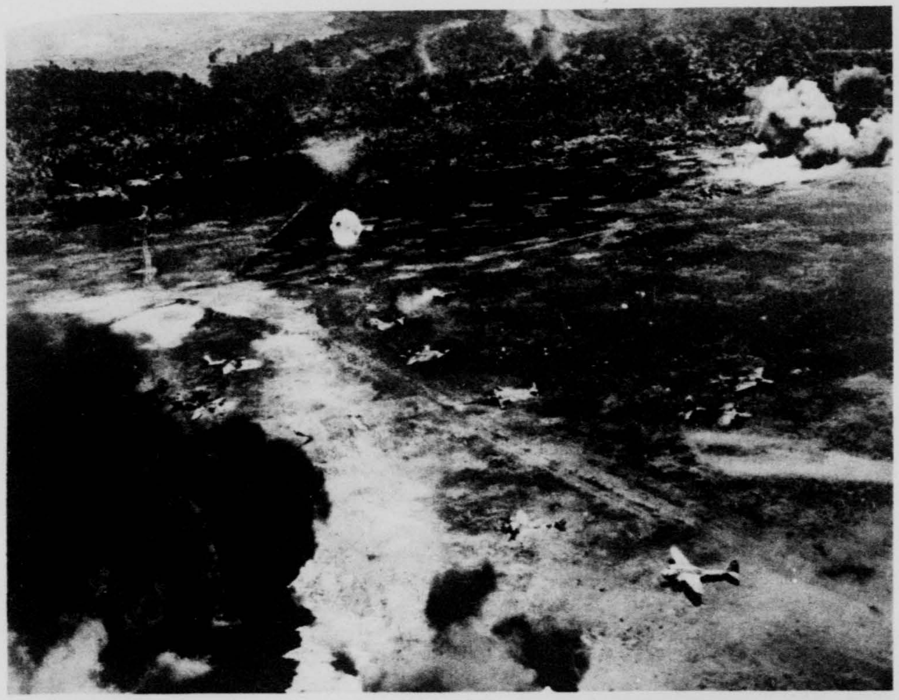
Hundreds are crossing over into neutral territory, if we hear only of star performers like Fraulein Kapp, Karl Kleckowski, Captain Hamberger, Dr. Vermehren and his Graefin Elizabeth. These were either on Gestapo work or accredited correspondents, two more of whom have ratted in Finland. These kind of people are worth their weight in wolfram as informants about the state of affairs inside the "Fortress," and how can Hitler hope to draw kindred ratters from the Allied countries?

Not that we haven't to be on our guard. Intricate machinery must be constantly at work to put us off the track, to lead us pretty dances, to spread optimism and, alternatively, pessimism. The Germans are past-masters at the business, notably in the "windows" looking on Occupied Europe.

Meanwhile, neutral correspondents in Germany get strafed by Goebbels for indiscretions, to say nothing of their commentating German colleagues. Goebbels is hoist by his own petard of mammoth doping and publicity, and he cannot shut up now.

So much for the obvious leakages from Hitler's "Fortress"—all well known in both camps, all incapable of being plugged at this time of day. Other means and methods of maintaining contact with what goes on over there I leave to your conjecturing.

"THE FORTIFICATION OF THE ATLANTIC WALL": A heavily reinforced fortress under construction on the French coast: this picture gives an idea of the great depth to which Hitler is sinking his much-boasted defences. Note the concrete gun-turret on the right



A MIXED CROWD OF "DEFENDERS OF THE EUROPEAN FORTRESS" INSPECTED BY ROMMEL: Filling the gaps in their ranks, the Germans are using odd units of various nationalities to man their defences. Slovaks, Lithuanians, Alsatians and Muslims from Yugoslavia have all been put into German uniforms and asked to defend the Aryans. This is one of the latest additions to the *Wehrmacht*—a small unit composed of dissident Indians whom the German propaganda machine calls "The Free Indian Forces." The picture was taken during an inspection by Marshal Rommel on the "Bay of Biscay Coastal Sector"

ONE OF THE GERMAN ANTI-INVASION DEFENCES: "A concrete bunker on the shore of the French Riviera coast." For some months past the German propaganda services have been distributing pictures similar to this—presumably to impress the neutrals and to scarce the Allies!

—AND THE POLES STILL POUR SCORN ON THE GERMANS: These two signs were painted up in Warsaw by members of the Polish Underground Movement. The sign at the top, painted on the Poniatowski Bridge over the River Vistula, reads "Germany Broken 1918-1943"; the lower sign, on the Kosciuszko Boulevard, says "Poland will triumph"

THE AIRFIELD AT HOLLANDIA before the Allied landings on the northern coast of New Guinea. Wrecked and shattered Japanese aircraft litter the airfield after the U.S. attack, while great clouds of smoke and fire rise from the blasted targets. In the centre of the picture, a white parachute with a deadly bomb attached floats slowly downwards

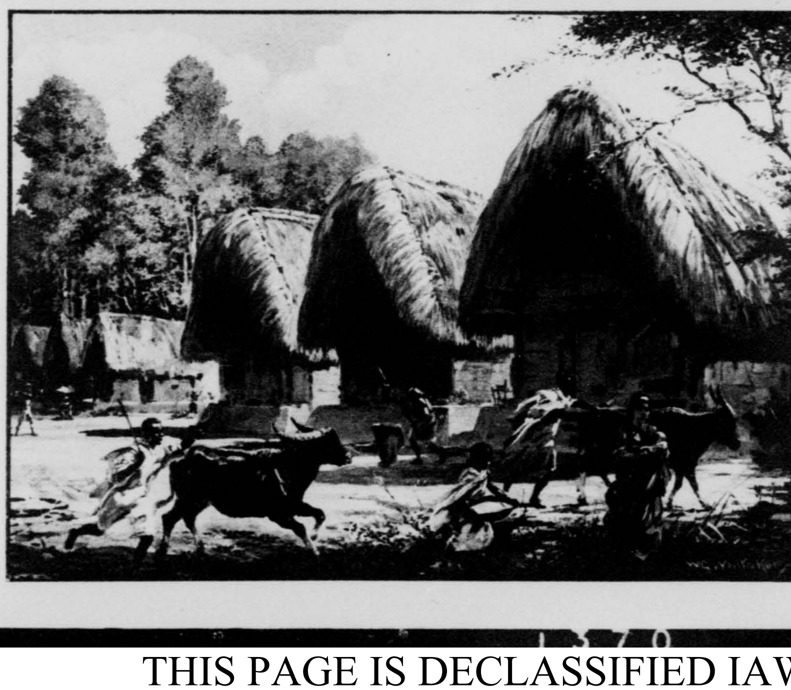
The CAPTURE of HOLLANDIA

And the Air Raids which Paved the Way for the Landings

Towards the end of April, General MacArthur made the dramatic announcement of the capture of the Humboldt Bay region in New Guinea and the occupation of Hollandia. In the latter area, the air bases used by the Japs were captured and are now being used for further operations against the enemy. Paving the way for the huge Allied landings on April 22 on the northern coast of New Guinea, the Allied air forces carried out heavy air raids on the Hollandia airfields. The pictures reproduced here were taken during the three-day attacks by the aircraft of the Fifth U.S. Air Force. The Japanese lost a total of 288 planes: most of these were destroyed on the ground—burned and strafed as they stood lined up on the airfields like clay pigeons. The three-pronged landings which followed this preliminary air bombardment were made by the largest ground and naval forces ever assembled to attack the enemy in the Pacific

SMOKE RISES FROM PRACTICALLY EVERY POINT on the Japanese airfield at Hollandia as Liberators of the Fifth U.S. Air Force skim across, unleashing their deadly load of high explosives

WRECKED INSTALLATIONS AND BURNING ENEMY AIRCRAFT after the devastating surprise attack by the Americans at Hollandia before the Allied invasion forces went ashore



A STRING OF BOMBS FROM THE FIRST GROUP OF B24 LIBERATORS "walks" across the Japanese airfield at Hollandia, annihilating dozens of enemy bombers and fighters spread helpless on the ground. In all, a total of 288 Jap planes were destroyed before the Allied troops went ashore—a crippling loss to the enemy during the ensuing operations on sea and land

THIS PAGE IS DECLASSIFIED IAW EO 13526

THE AIR SIDE OF THE WAR IN BURMA: ALL THE AIR OPERATIONS ARE CARRIED OUT OVER JUNGLE AND RIVER COUNTRY, where the pilots need sharp eyes to detect the enemy's movements. This scene shows a group of fighter-reconnaissance Hurricanes attacking Jap positions in the Tiddim Road area—*Drawing by Roland Davies*

It is admitted on all hands that, in the air over the fighting fronts in Burma, the R.A.F. hold a decided mastery. Especially during the long and difficult withdrawals of Allied troops to Imphal—notably that of the 17th Division from Tiddim—the R.A.F. prevented Jap air interference: this gave the British command freedom of movement for the consolidation of the Imphal defences—a precious asset. A fighter-reconnaissance squadron of Hurricanes, the only one of its kind in this area, has been operating under Army control, searching out targets between Tiddim and Kohima, and strafing the Japs whenever opportunity offered. Flying over the jungle country is not ideal work for fighter aircraft, but few opportunities have been missed by the keen-eyed pilots

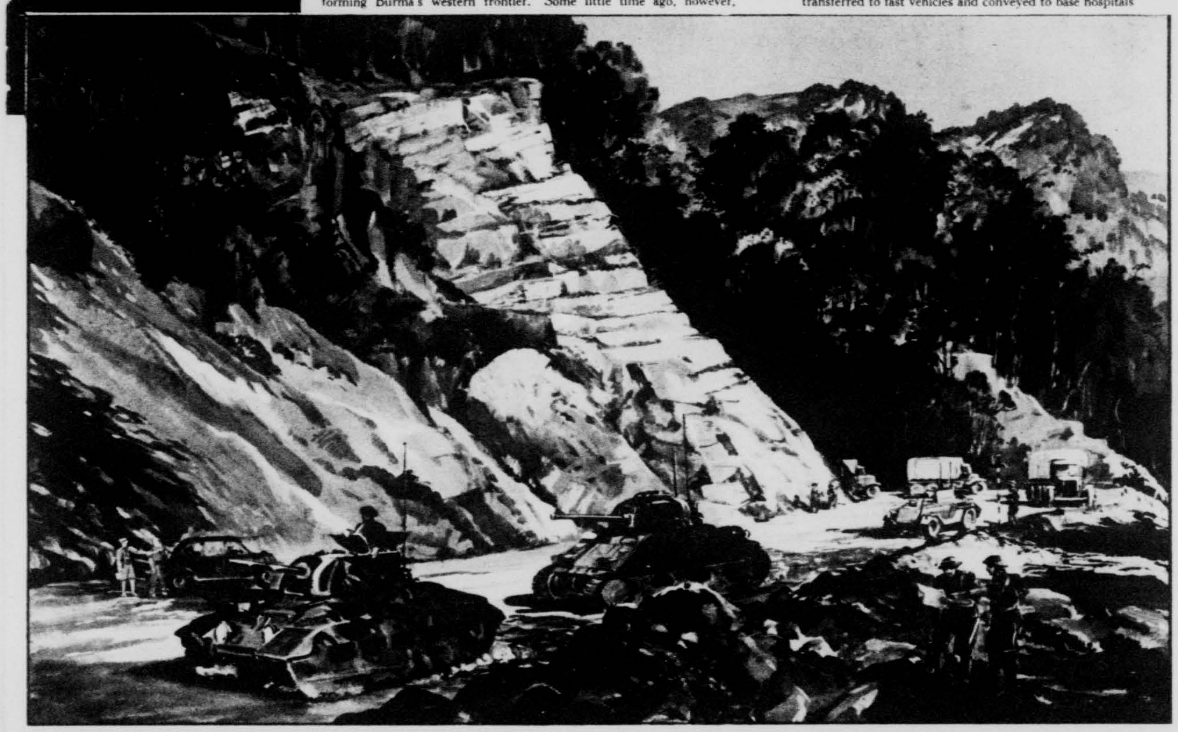
On left—**DURING THE JAP ATTACKS ON MANIPUR, the enemy raid all the native villages for food**
—*Drawing by W. G. Whitaker*

Apparently in order to travel as light as possible, Japanese columns have been raiding native villages for food supplies. Cattle and rice are the chief commodities carried off by the raiders. If supplies of food are not obtained in this way, the Japanese trooper goes hungry. This makes him a very hungry customer as a raider. The Naga villages around Imphal and Kohima have not been spared; the villagers do a good deal of work for the wealthier Manipuri. The drawing here shows some would-be Japanese raiders being checked by an Allied scouting party. The huts of the Naga villagers are quite well built, although the heavy thatch of the roofs has a somewhat shaggy appearance. The walls of the dwellings are neatly constructed, and each hut is built up on a base, raised some two or three feet from the ground. Most of the villagers possess neatly woven baskets in which food and other articles are carried or stored

DURING THE FIGHTING FOR IMPHAL: One of the "intense little battles" in the hills of the Manipur Plain—a scene on the Imphal-Tammu Road when the Japs were driven out after eighteen days—*Drawing by E. G. Lambert*

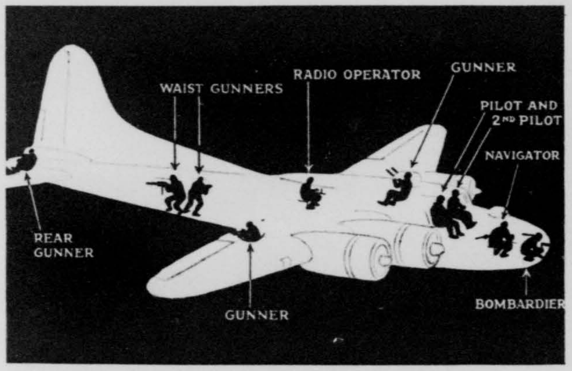
The FIGHTING in BURMA

Scenes during the Struggle in the Manipur Plain around Kohima



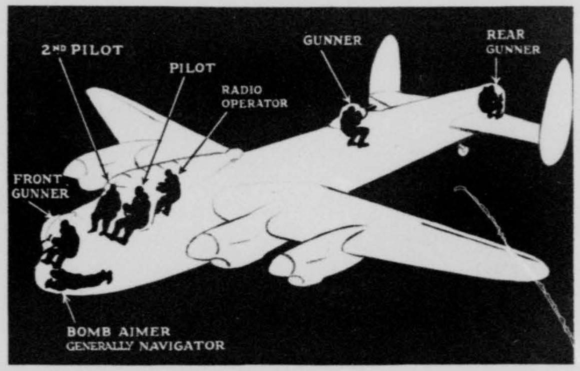
—*Special Sphere Drawings*

Intense little battles were fought in the hills around the Manipur Plain as the Japanese sought to gain strategic positions or as the British and Indian troops pushed the enemy off vantage points. One such fight took place on the Imphal-Tammu Road. The enemy units were killed or taken prisoner at a point overlooking the road after occupying it for eighteen days. For more than a fortnight intermittent attempts were made to prise the enemy from a position from which they were able to fire at our motor transport. They resisted the efforts of tanks, bombers and infantry to shift them: then, after an air bombardment, men of a West Country regiment cleared the greater part of the hill. That night Japanese from lower down the slopes counter-attacked four times. At dawn there were forty-eight Japanese dead on the wire around our position.

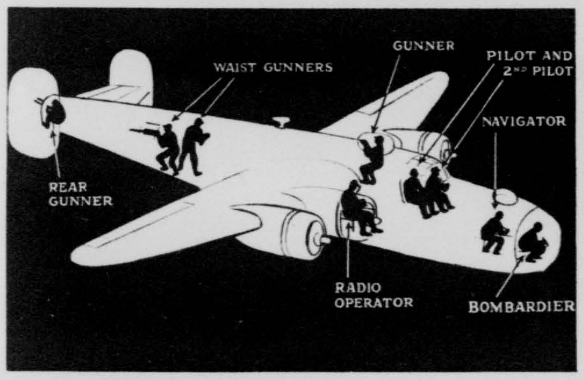


A few hours later the last enemy gun-post was disposed of

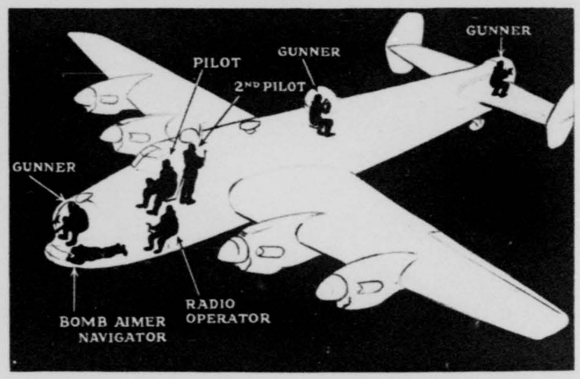
***Below*—A BRITISH RELIEF COLUMN IS RUSHED TO KOHIMA TO EVACUATE THE WOUNDED—a scene on the main road to Dimapur**—*Drawing by E. G. Lambert*



For many years all connections between India and Burma were by sea: it was a much easier route than the parallel jungle barriers forming Burma's western frontier. Some little time ago, however, an all-weather road was cut from Dimapur in Northern Assam, through the intervening hills and past mountain peaks, to the little border state of Manipur. In many places the road clings to the mountain-sides at about 5,000 ft. above sea-level. Between Dimapur and Kohima this road climbs all the way; after Kohima station is passed, the descent is persistent all the way to the plain of Manipur. Occasionally the road dips where the streams cut across its path. The section of road shown here is between Kohima and Dimapur: it is on this road that a dash was made by a special relief force for the purpose of evacuating wounded from Kohima. This was successfully accomplished, the wounded being transferred to fast vehicles and conveyed to base hospitals



THIS PAGE IS DECLASSIFIED IAW EO 13526



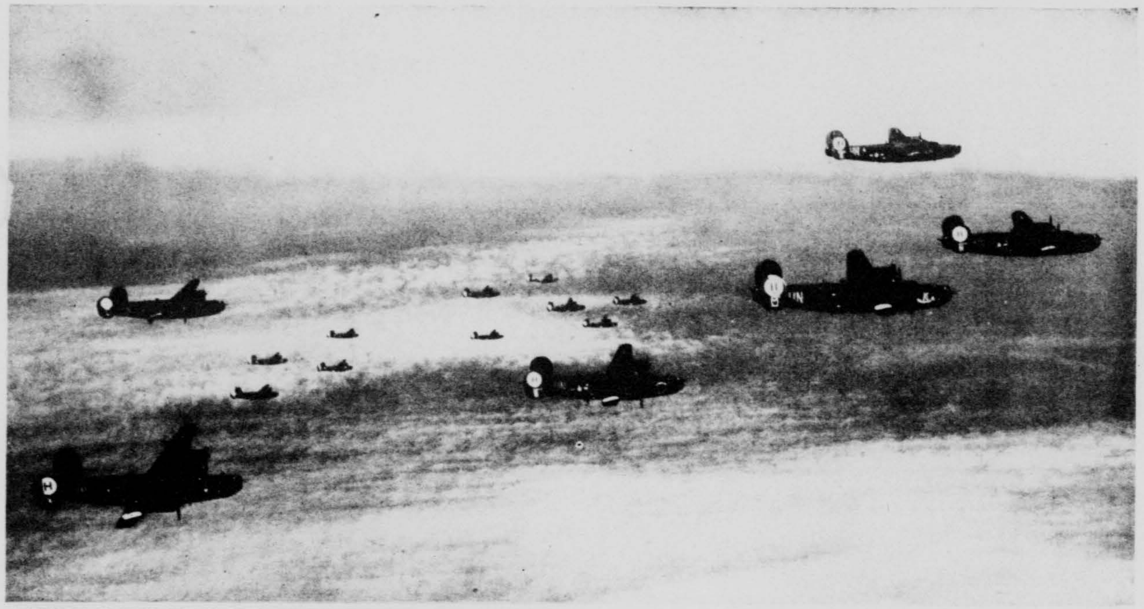
TEN MEN MAKE UP THE CREW OF A FORTRESS, DISPOSED IN THIS FASHION

THE BRITISH FOUR-ENGINED LANCASTER CARRIES A CREW OF SEVEN

THE AMERICAN LIBERATOR BOMBER USUALLY CARRIES A CREW OF NINE

THE HALIFAX ALSO HAS A CREW OF SEVEN, OF WHOM FIVE ARE FORWARD

THE BIG BOMBERS



And the Crews They Carry on Night and Day Operations Over Germany

How the crews of the big day and night bombers are disposed within the aircraft : The four types shown by Mr. Roland Davies in the silhouette drawings above are the American Flying Fortress and Liberator and the British Lancaster and Halifax: these are the "heavies" which are maintaining the day and night offensive over Germany and the occupied territories. The American aircraft carry a greater number of aircrew than their British equivalents: in the Fortress, there are no fewer than five gunners, in addition to the pilots, navigator, bombardier and radio operator; in the Liberator there are four. The two British aircraft, however, usually carry only three gunners. Lancasters and Halifaxes only bomb by night and the gunners are there to ward off Nazi night fighters. The Fortresses and Liberators only bomb by day, and frequently they have to fight their way in to the target and out of it—hence the necessity for a gunner at every angle

WHAT CAN HAPPEN TO A BOMBER WHEN IT MAKES A HEAVY LANDING. This is a Mitchell B25 medium bomber: whilst being flown by a Naval pilot the aircraft landed at the Washington National Airport, overran the landing-strip and plunged down a 20-ft. embankment. The result was that the aircraft broke its back, the fuselage splitting aft of the pilot's cockpit. None of the crew was seriously injured!

THIS PAGE IS DECLASSIFIED IAW EO 13526

LIBERATORS ON THEIR WAY TO BOMB FRANCE BY DAYLIGHT: These big American aircraft carry a crew of nine men, as indicated in one of the silhouette drawings given on the facing page: four of these men are air-gunners. Invariably, when carrying out their hazardous daylight operations, the "heavies" fly in close formation, as indicated in the above picture. This is in order to bring the heaviest weight of fire-power to bear on the Nazi fighter aircraft, which come up in swarms to contest the air with the invaders. The sixteen bombers seen here can bring no fewer than sixty-four machine-guns to bear on the enemy, the whole formation thus literally bristling with guns. The formations are usually "stepped-up" from front to rear and each aircraft supports its neighbour in a carefully thought-out plan. It is only by the adoption of such combat technique that the daylight raiding of Germany and France has been rendered possible. This picture was taken on April 10 as the force of Liberators was approaching Bourges, south-east of Orleans, for an attack on the aircraft assembly plant and transport base which the Germans have established there

A.D.G.B., THE INITIALS WHICH DENOTE THE NEW ORGANISATION WHICH HAS TAKEN THE PLACE OF FIGHTER COMMAND. Mosquitoes of the Air Defence of Great Britain, ranging as far as the Bay of Biscay, shoot down three Junkers 88's—*Drawing by Roland Davies*

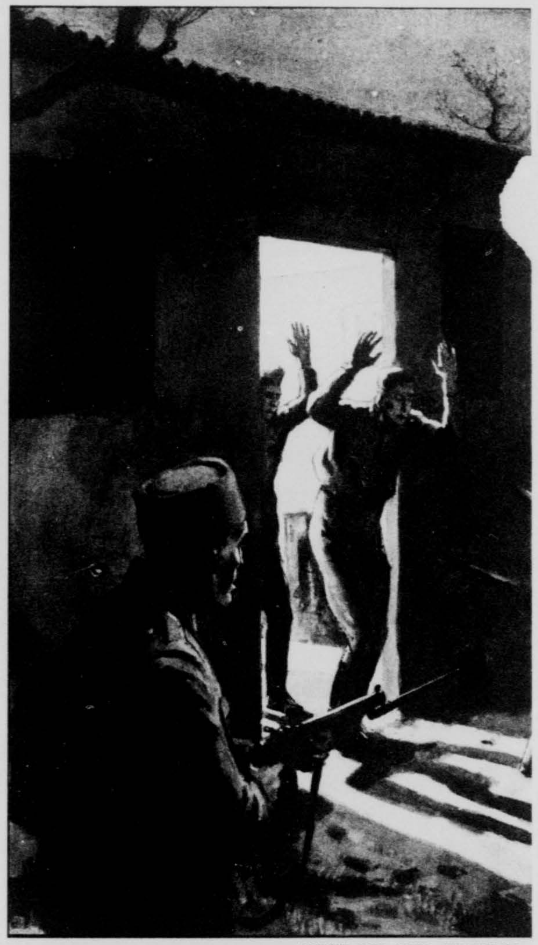
After a long and memorable career, Fighter Command was abolished some months ago and the Air Defence of Great Britain was launched in its place. Now the initials "A.D.G.B." are creeping into the communiques from the Air Ministry to baffle those who still remain in ignorance of the change-over. The Air Defence of Great Britain is not only concerned with patrolling the shores of this country: its long-range aircraft fly out as far as the Bay of Biscay. Recently seven Nazi planes, operating from French bases in attempts to interrupt the anti-U-boat reconnaissance in that area, were destroyed in one day and others were damaged. Two of the Nazi Junkers 88's were shot down by A.D.G.B. Mosquitoes in the morning, and another three were brought down by similar aircraft in the afternoon

C

FROM THE FIGHTING AREAS IN ITALY

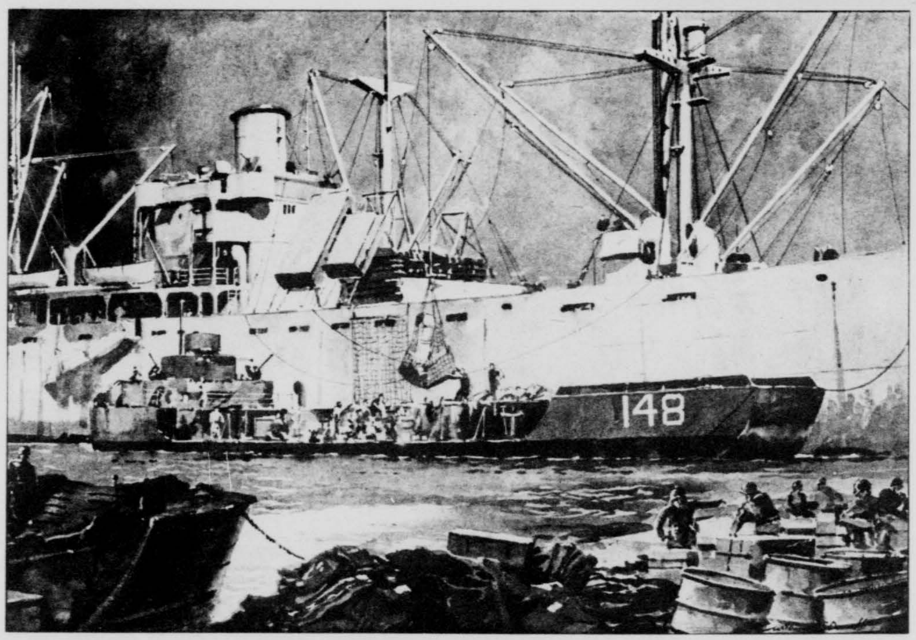
Scenes from the Anzio Beachhead and the Garigliano River Battlefield

—Special Sphere Drawings



The drawing by Mr. Osmond on the right illustrates one of the most successful raids carried out by British troops in the bridgehead during recent weeks. It was made by a force of infantrymen, supported by tanks and tank-destroyers, who took sixty-one prisoners, killed nineteen Germans, wounded many more, and wrecked enemy strong-points three miles behind the enemy's lines across the Pontine Marshes.

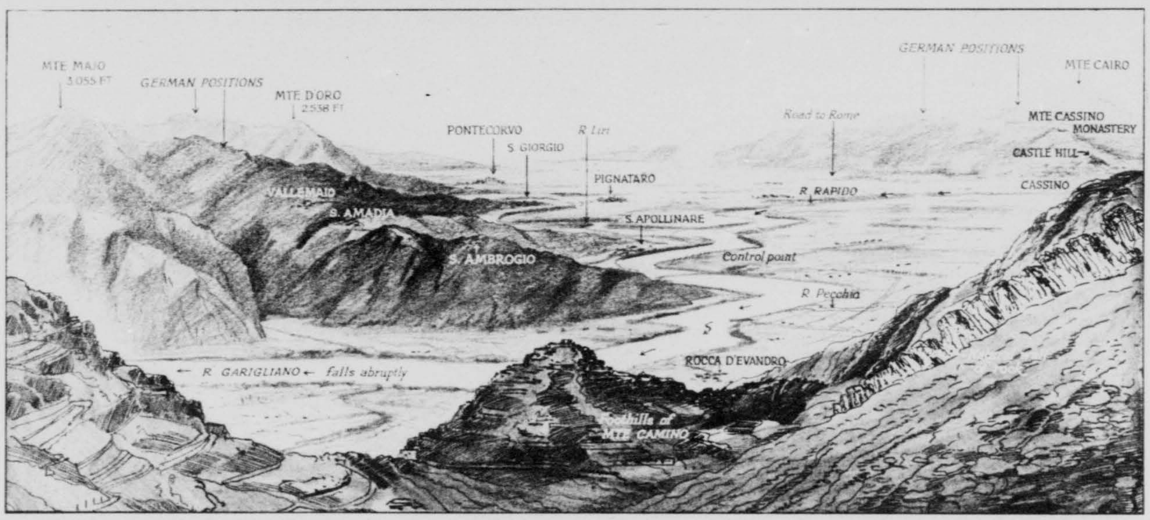
The raid was carried out without any artillery preparation and caught the Germans completely by surprise. The attacking force returned without a single casualty. The Allied troops set off soon after 4 a.m. by the light of a waning moon, sappers going ahead to clear mines from the path of the tanks. As they crept up the road they passed a house where they heard the sound of a party. The advance guard continued with their task, but the men following stopped at the house. The occupants were having a drinking party and were unaware that anything was amiss until their captors arrived.



The operation lasted only six hours. The only loss suffered was one tank, which struck a mine. Members of the raiding force, back at their head-quarters, told how they had chased the enemy. They found only one among the whole lot who was not glad to be a prisoner. The raid was officially described as a reconnaissance in force and was carried out to capture prisoners, not to take territory. As usual, on the night before such early-morning sorties the raiders painted their faces with streaks of green, black and yellow paint.

"HOMES" OF THE EIGHTH ARMY: A tank crew up in the fighting area. The men of the Eighth Army on active service live in many different kinds of billets which they call "Home." The contrasts are great—the infantryman's home consists of a hole in the ground; troops a little farther from the line are fortunate if they find a half-demolished house in which to shelter; others are fortunate enough to find undamaged houses. Some rely—and even prefer—to live in their "bivvies." Here a group of New Zealand tank men are working and resting in front of their own special mobile home—a tent extension from the tank, which can be erected in a few minutes

WITHIN THE ANZIO BRIDGEHEAD perimeter: one of them is



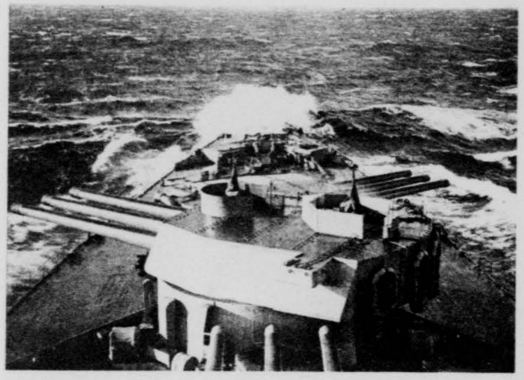
THE CEASELESS LANDING OF ALLIED STORES IN THE ANZIO BEACHHEAD, a work which proceeds steadily in spite of German air attacks. This drawing shows a Liberty ship transhipping stores and equipment into a Tank Landing Craft for transference to the shore (*See notes at right*)—*Drawing by Wm. McDowell*

On left—Even the side gangways of the landing-craft are used to carry the immense amount of equipment required in the beachhead. The Liberty ship is so well fitted with derricks and winches as to be entirely independent of shore gear for unloading. Note the heavy "jumbo" derrick stowed up the foremast, and which is used for exceptionally heavy lifts: note also the life-rafts of the Liberty ship; these are kept on special launching-ways ready to be dropped in the water at an instant's notice. The enemy has tried to disrupt the landing operations by long-range shelling with 210-mm. guns.

Ever since the Allied landing at Anzio in January last, military stores and equipment of all kinds have been landed in a continuous stream broken only for short periods when excessively rough seas made landing operations impossible. The stores landed have been disposed in dumps on shore in such a way as to minimise the effects of enemy shelling and bombing. The situation in the beachhead to-day is one of great interest. The piling-up of stores continues without cease, and the Germans have many times stressed that an offensive is "imminent," possibly to coincide with the opening of a "Second Front" operation. Only subsequent developments will reveal the meaning of the building-up of this small area into what is virtually a great military store-house. At any moment now, the solution may come . . .

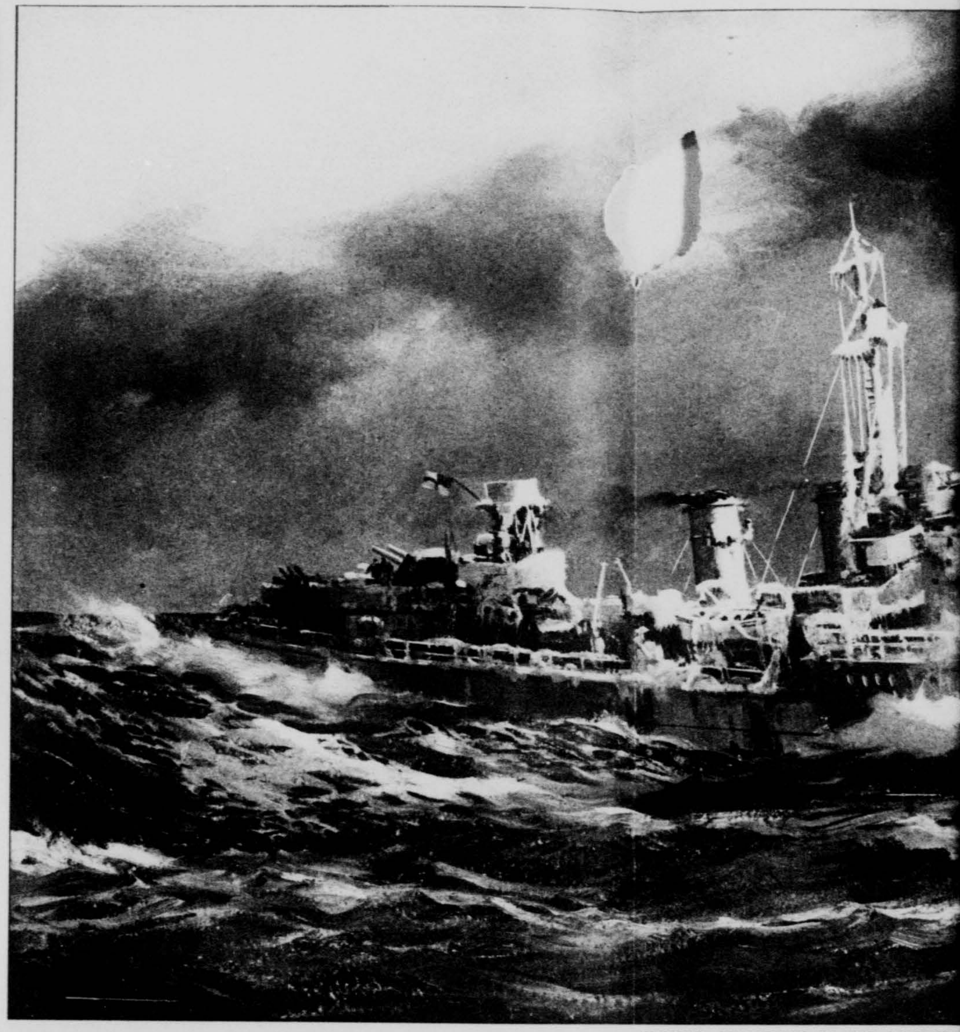
THERE HAS BEEN A PAUSE IN MAJOR OPERATIONS. In place of these, large-scale raids have been made by British troops in enemy-held territory around the depicted in the drawing above. It illustrates a big raid made last month when infantrymen, tanks and tank-destroyers penetrated three miles behind the German lines across the Pontine Marshes and took sixty-one prisoners *(See notes at left)*—*Drawing by Edward Osmond*

THE PROLONGED STAND ON THE GARIGLIANO FRONT, where rapid oscillations in the river level have puzzled the Allied forces. Controlled by the Germans, the river level has suddenly dropped five feet, and then risen again. This drawing shows a view of the Plain where the control points probably exist, as seen from the slopes of Monte Camino—*Drawing by Percy Home*



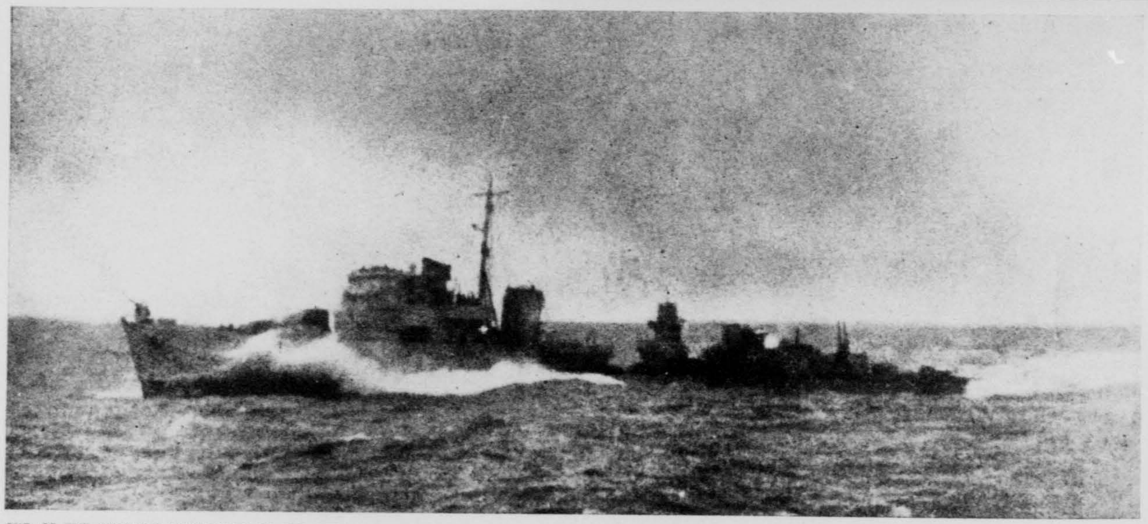
The situation on the Garigliano front (which extends from the sea to the Liri Plain) was recently bettered by a small extension of territory on the extreme left, in a direction north-west of Minturno. This was doubtless done in order to make the butt end of the line more "comfortable." But another occurrence affected the whole length of the line and especially the supply of food and ammunition to the Allied forces: this was the sudden fall of the river by some five feet, followed soon afterwards by a rapid rise above the normal level. Enemy action higher up the river was responsible for this: it gave the engineers responsible for the maintenance of the pontoon bridges a good deal to think about. If the enemy were in a position to dam up a sufficient body of water and then release it in a torrent, bridges might be swept away or submerged: damage and delay would in any case result. The plain through which the Liri and Rapido Rivers and their tributaries flow is flat and marshy, and it is probable that control weirs already in existence can be operated, but the bulk of the water may be limited by the height of the river-banks. The drawing above shows the junction point of the Garigliano, Liri and Rapido Rivers, as seen from the Camino heights

WINTER IN THE NORTH ATLANTIC



Four Months of Heavy, Ice-laden Weather for the Ships of the Royal Navy on Anti-U-boat Patrol

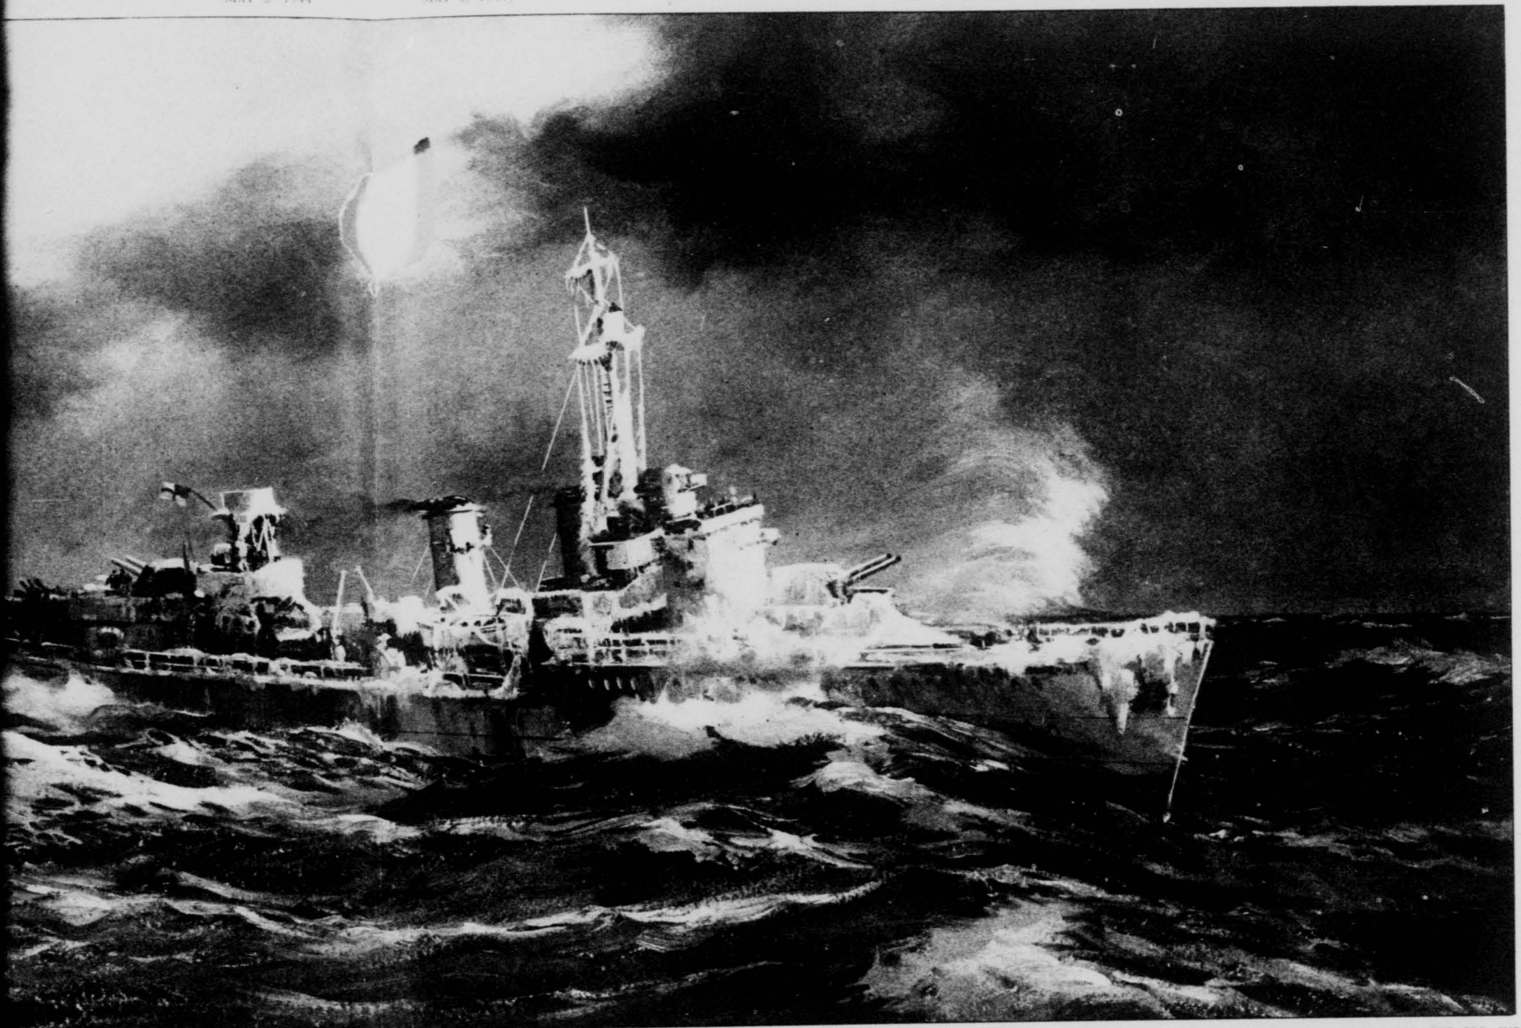
Those who have to deal with the sea have very often a "sixth sense" which enables them to foresee, as it were by instinct, the kind of weather they may have to endure in the course of the forthcoming weeks. An example of this occurred in the autumn of last year when officers of H.M. ships foretold a stiff winter in the North Atlantic. This pre-judgment was fully justified. Ships of the Royal Navy, the Royal Canadian Navy and Allied vessels have endured four months of bitter weather, necessitating much additional strain and watchfulness. The ordinary cold weather has often hardened overnight, with a bitter icy wind. The pitching vessel would then receive a fresh coating of ice with every plunge until, in some cases, the weight of it on the ship would begin to endanger her stability. Every rope and iron stanchion would become encased, in addition to the heavier masses of ice which would form on any flat or shelving surface. Large lumps of ice would sometimes fall with a crash to the deck, endangering the safety of the crew.



In the drawing on the right a British escort destroyer of 1,250 tons is depicted. Some of these smaller vessels—the corvettes, for instance—became loaded up with ice: in one case, a vessel of this type was estimated by her officers to have carried 500 tons, half her own displacement. For seventeen hours it continued to increase, although efforts were made to chip it away. The slender foremast became so heavily crusted that it broke, and the top weight given by the solid formations of ice began to give the ship a list to port. In some parts of the ship where ice, snow and sea water had collected, the crew kept their watches standing in nearly a foot of freezing slush. Although the crew worked for hours, the anchor and anchor chains were still frozen when the ship eventually got into port. It took two days to chip away the solid mass of ice.

ONE OF THE BIG SHIPS OF THE ROYAL NAVY IN ROUGH WEATHER, with a heavy sea breaking over the fo'c'sle. This vessel is the *Rodney*, a battleship of 38,000 tons launched in December 1925 and still doing valuable work at sea. Sister-ship to the *Nelson*, she mounts 16-in. guns and carries a complement of over 1,300 officers and men. Her cost to the nation was over £7,600,000

WINTRY CONDITIONS IN THE ATLANTIC
SHIPS OF THE ROYAL NAVY, which have
making heavy going in a turbul

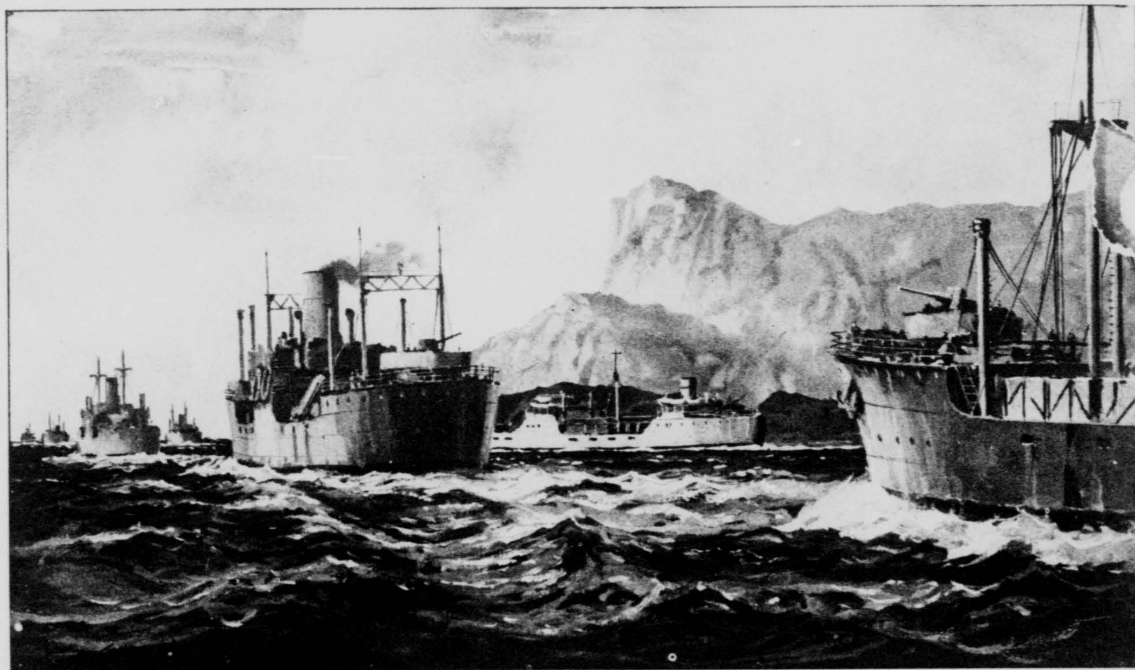


ONE OF THE SMALLEST DESTROYERS IN THE ROYAL NAVY: The Hunt class destroyer "Holderness" ploughing through rough seas during a winter patrol in the North Sea—a picture taken from the deck of the corvette "Mallard"

The Hunt class are mostly vessels of 904 tons, though some of them are thought to be of an enlarged and modified design. They are 272 ft. in length with a beam of 28 ft., and they have a speed of 27½ knots. The Hunts were all (except two) laid down in 1939 under the programme for that year, and they were completed in 1940: they have since done fine service in the North Sea and elsewhere. The armament consists of four 4-in. guns and eight smaller weapons. In a rough sea, they provide anything but a stable platform for their crew!

ONE OF BRITAIN'S LATEST U-BOAT HUNTERS—A
additions to the Royal Navy went out on

WINTRY CONDITIONS IN THE ATLANTIC ARE ONLY NOW DRAWING TO A CLOSE. THE FIFTH WAR WINTER HAS PROVED A VERY HARD ONE FOR THE SHIPS OF THE ROYAL NAVY, which have had to go out under any and every weather disability. Here an escort-type destroyer (of about 1,250 tons) is making heavy going in a turbulent sea and in ice-forming conditions which have sheathed her from stem to stern—*Drawing by Montague Dawson*



through rough seas during a winter patrol in the ...llard"

ONE OF BRITAIN'S LATEST U-BOAT HUNTERS—A NEW CLASS OF DESTROYER. This picture was taken in the North Atlantic recently when some of these newest additions to the Royal Navy went out on an anti-submarine patrol in wintry weather. Racing through the heavy seas at top speed, this destroyer seems almost to be leaping out of the water

AMERICAN LIBERTY SHIPS ON THE ARCTIC ROUTE TO RUSSIA, carrying supplies of all kinds for the Red Army, as well as food and raw materials. Soon the Arctic route will be supplemented by a Pacific route as well—*Drawing by Wm. McDowell*

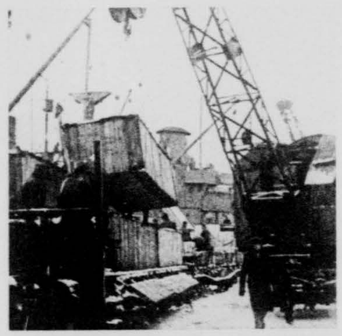
LEND-LEASE for RUSSIA

The Huge Volume of Equipment and Supplies Sent to the Soviet by the United States

Hitherto most of the supplies reaching Russia under Lend-Lease agreements with the United States have gone by way of the Arctic route to Murmansk. Shortly, however, a new route will be opened (or greatly amplified)—across the Pacific: by this means, supplies will be shipped from American West Coast ports, as well as from the East coast. The existing volume of traffic across the Pacific has been comparatively slight

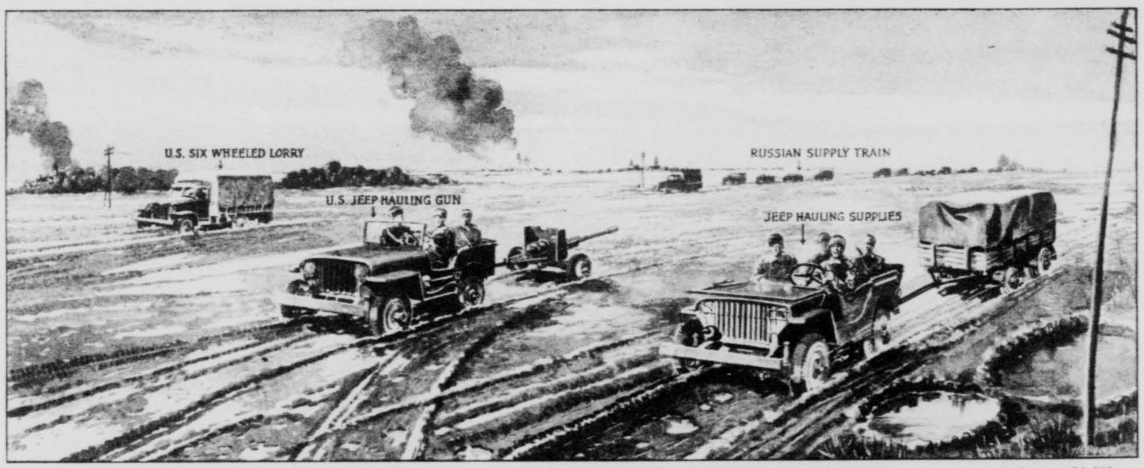
Although it is generally known that the amount of Lend-Lease material sent to Russia by Britain and the United States has been very great, few people in this country can have realised what enormous quantities have, in fact, been dispatched. A recent report from America shows what the contribution of the United States alone has been.

In January and February 1944 more than 1,000,000 tons of munitions and other war supplies were shipped. In January and February 1943 the figure was 670,000 tons. In the same period of 1942 they totalled 200,000 tons. From the beginning of the programme in October 1941 to March 1, 1944, more than 9,500,000 tons of supplies were shipped from the United States to the Soviet Union. Up to March 1, 1944, more than 8,800 planes had been sent to the Soviet Union from the United States, either by air or by sea. Most Soviet planes were produced in Russian factories, but many squadrons of the Red Air Force were flying P.39 Airacobras, P.40 Warhawks, Douglas A.20 attack bombers, and B.25 Medium Marauders.



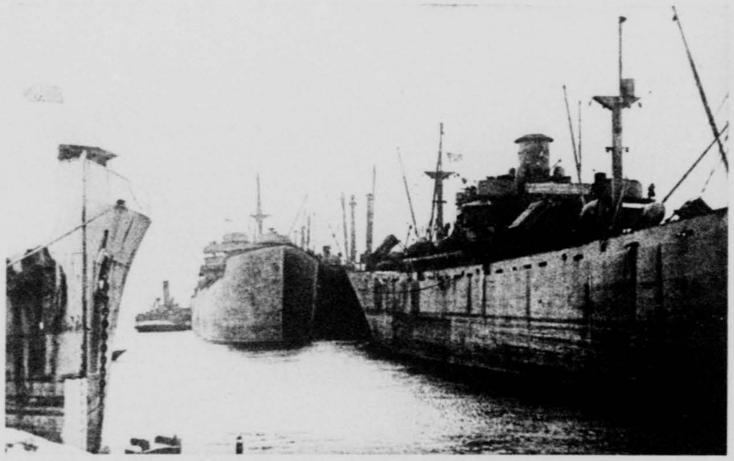
Other weapons and equipment supplied included:

Tanks and tank-destroyers -	5,200
Trucks - - - - - -	190,000
Jeeps - - - - - -	36,000
Other military motor vehicles ...	30,000
Army boots (pairs) - - -	7,000,000
Field telephone wire (miles) -	550,000

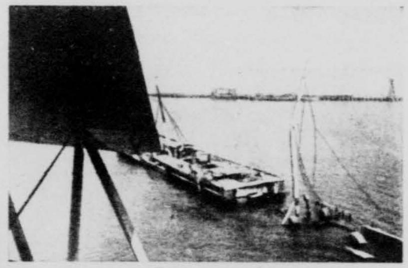


Locomotives, railway wagons, railway lines, wheels and axles have also been shipped.

Raw materials included:	TONS
Steel - - -	1,450,000
Non-ferrous metals -	420,000
Explosives - -	200,000



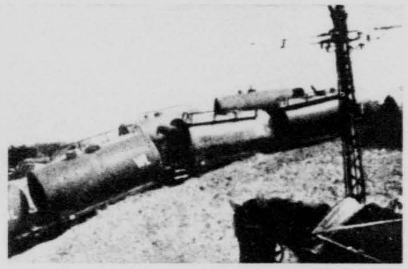
Food shipments totalled 2,000,000 tons, including 100,000 tons of "Tushonka," a canned pork product prepared from a Russian recipe. More than 640,000 tons of lard, pork fat and vegetable oils, and 51,000 tons of butter have been sent with 13,000 tons of seeds for Russian farmers.



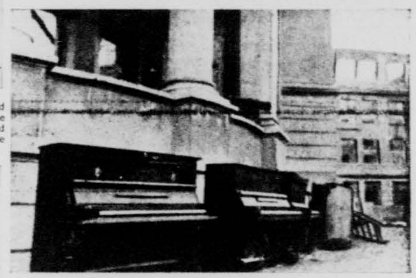
IT IS ALWAYS "RUSH TIME" AT MURMANSK: A scene just after the arrival of British and U.S. supplies for Russia under Lend-Lease

MANY OF THE BATTLES ON THE RUSSIAN FRONT HAVE BEEN FOUGHT AND WON LARGELY THROUGH AMERICAN AID. The jeep is everywhere in Russia—36,000 of them—hauling guns, cars, supplies, even light tanks, and for a score of other purposes. American lorries—190,000 of them—have been used for the heaviest work, because most of them have six- or eight-wheel drive—*Drawing by H. P. Burton*

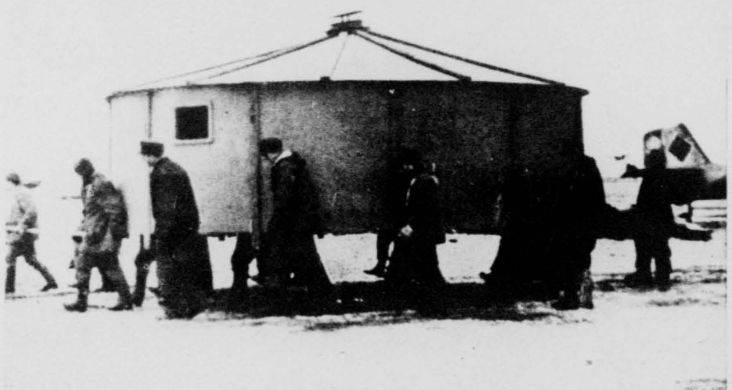
THE CROWDED HARBOUR AT MURMANSK. This picture was taken in 1943 when Allied aid to Russia was reaching a peak. The ocean-going steamers are all flying British or American flags and had just arrived with their holds and decks packed with war material for the Red Army's many offensives against the Germans



IN LIBERATED ODESSA: A German vessel in the harbour sunk by the Soviet Air Force before the Russian occupation of the city



Trains and automobiles which the Germans had intended to evacuate, abandoned by them in Odessa and now being used by the Russians

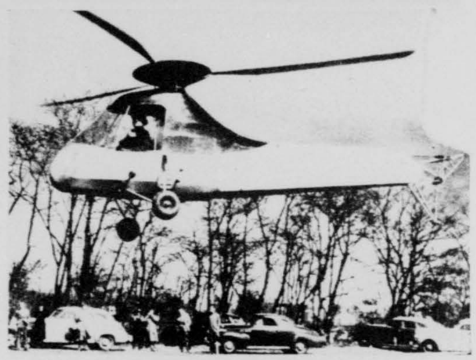


A TELLING PICTURE FROM THE GERMAN FRONT IN RUSSIA: It comes from Germany itself, via a neutral country, and bears the following description: "Still Partisan war! Even near the Rumanian border, partisan detachments operate behind the German lines and occupy many German Divisions." These Nazi troops are operating from snow-covered defence positions; obviously, they are picked troops, well provided with more suitable cold-weather clothing than in the disastrous (for the Germans) winter of 1942

Tank cars, filled with oil, which the Germans also had to leave behind when they fled from the great city of Odessa

The Nazis planned to take away all the pianos in the Odessa Conservatory. They were given no time by the Russians to do so

AN IDEA FOR THE SNOW-AND-ICE WARFARE OF THE FAR NORTHERN FRONT IN RUSSIA: A circular portable tent, built after the Finnish model, is transported by Nazi soldiers during their retreat on the Eastern Front



Inhabitants tearing down defence works put up by the Germans in Odessa, where normal life has already been resumed by the Russians

NEWS PICTURES OF WAR ACTIVITIES in Many Parts of the World

THE FIRST AMERICAN SERVICEWOMEN TO ARRIVE IN HAWAII: This company of W.A.C.S. was the first to be assigned to duties in the Central Pacific area. The women are to work with the U.S. Air Transport Command, to relieve men needed farther south in the Pacific war-zone. Hawaii is the island in which Pearl Harbour is situated

A FURTHER DEVELOPMENT IN THE HELICOPTER. This machine was first displayed to the public at Philadelphia, when it was demonstrated by Mr. Frank N. Piasecki. In the picture, the helicopter is almost stationary; but it can attain a speed of 90 miles per hour and it can land within an area only 50-ft. square. It has been built by the P.V. Engineering Forum, of which Mr. Piasecki is the President

AN EXAMPLE OF PRECISION BOMBING when the R.A.F. hit the Field Air Park and Signals Equipment Depot at St. Cyr, in France. On the night of April 10-11, Lancasters of Bomber Command attacked St. Cyr, near Versailles, where the Nazis have installed a Field Air Park and Signals Equipment Depot. Considerable damage to many of the buildings was wrought. The picture on the left was taken before the attack: it shows the group of buildings believed to contain large stores of signals and radio equipment for the use of the *Luftwaffe*. The picture on the right shows the same building after the bombing. Lancasters carrying 8,000-lb. bombs produced this remarkable example of precision attack. There is practically complete devastation

A FRENCH POLITICIAN ESCAPES FROM FRANCE. Louis Marin, well-known politician who baffled the Vichy Police, is now in London. To effect his escape, he sacrificed his walrus moustache, dyed his hair, combed it a different way and schooled himself to look as he did twenty-five years ago. It is now considered certain that General de Gaulle will offer M. Marin a seat in the French National Government

THREE INDIAN SOLDIERS DECORATED BY GENERAL AUCHINLECK. During a recent visit to the Field Artillery Training Centre and other units at Muttra, in the Punjab, the Commander-in-Chief decorated these three men: they are Subadar-Major Jawan Khan, Subadar-Major Sipahi Singh and Jemadar Bahadur Khan. The first two received the O.B.I. (2nd class) and the latter the I.D.S.M. for bravery at Bir Hacheim

DECORATIONS AWARDED TO BRITISH, FRENCH, POLISH AND AMERICAN OFFICERS IN ALGIERS: General Sir H. Maitland Wilson saluting at the presentation of arms. At a ceremony held recently in the square of the Palace du Gouvernement, in Algiers, decorations were awarded to British, French, Polish and American officers. The salute was taken by General Sir Henry Maitland Wilson, Supreme Commander in the Mediterranean. General Devers, Deputy Commander, presented the awards

AN ADDRESS BY THE GENERALISSIMO. Marshal Chiang Kai-shek is here seen addressing Chinese soldiers undergoing training under U.S. Army instructors at the Infantry Training Centre in Kwangsi Province. Here Chinese officers and men are trained in the use of modern American weapons. The Director of the School is Brigadier-General Thomas S. Arms

CHINESE AT WORK ON AIRFIELD CONSTRUCTION: Long lines of labourers use every conceivable means of conveyance in transporting stones and earth to build the runway. The aircraft is a Liberator

MIXING A "BINDER" to pour over broken rocks to solidify the runways of a Chinese airfield. Lack of modern equipment and machinery is not stopping the resourceful Chinese from building modern airfields. Three hundred thousand workers have been conscripted to do the job, and a hundred thousand little hand-made wheelbarrows are used to transport materials: even the chipping of stones for the runways is done by hand. American engineers, working in conjunction with Chinese Army engineers, are supervising the work. As fast as the runways are completed, they are being put into immediate operation

A VOLCANIC ERUPTION IN THE ALEUTIANS. An American naval air transport is here seen passing near the Veniamenof Volcano. This is one of the oldest volcanoes known: it is estimated to have had a height of from 18,000 to 20,000 ft. before its top was "blown off." The crater now is 9,000 ft. high, with a new crater building up inside the old one. Veniamenof's last major eruption caused the evacuation of the nearby town of Perryville

BATTLE SCHOOL FOR PADRES: In camouflage kit, they are learning how to enfilade through villages where snipers may be lurking to pick them off. In a lovely village in the Midlands, the modern padre is to be found wearing a Crusader shield as a "flash" on his shoulder. For picked volunteers go up there week by week to attend what is locally known as the Padres' Battle School. It is held in a village nestling round a lovely old Saxon church-tower; headquarters are the local rectory, taken over by the Army for the duration. The idea of the battle course is threefold and simple. First, it aims at teaching chaplains self-preservation. Secondly, by bringing together chaplains from all branches of Army life in this eve-of-battle atmosphere, it aims at promoting a keen spirit of brotherhood among them. And, finally, by concentrating as much as possible on devotions and prayer, it aims at giving the priests that inspiration which comes from worshipping together

PADRES WHO WILL TAKE PART IN THE SECOND FRONT. From left to right are the Rev. W. J. Page, of Bexhill; the Rev. G. Crane, of Norwich; and the Rev. S. C. Robinson, of Grimsby

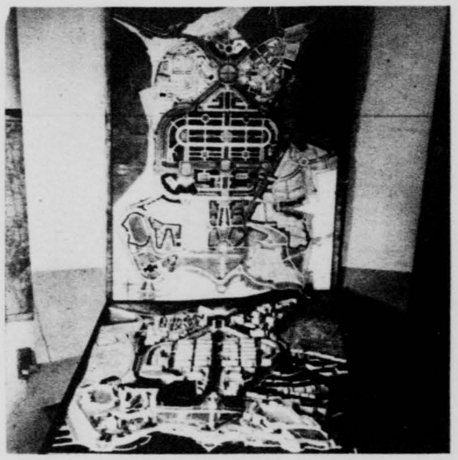
PLYMOUTH PLANS A NEW CITY

Britain's Most Heavily Bombed City as It Lies in Ruins To-day, and How It will be Recreated After the War

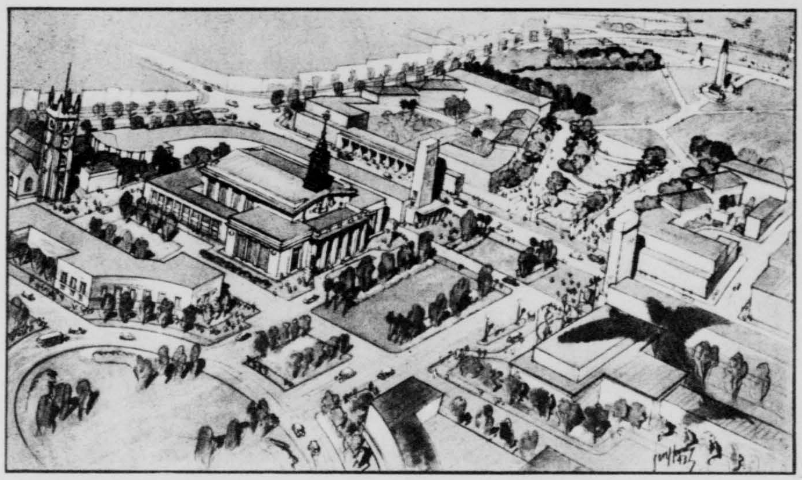


—The Plans Prepared by the City Engineer and by Professor Abercrombie

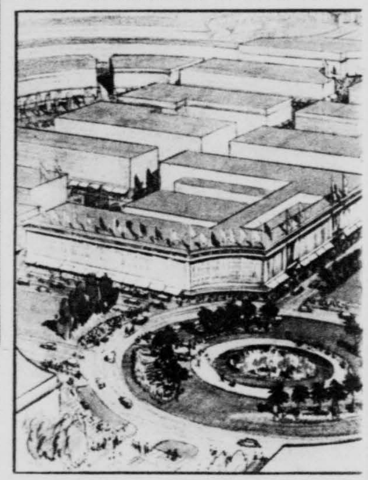
Plymouth is one of the most heavily bombed cities in Britain: its Corporation, however, looking to the immediate future, is already working out elaborate plans for reconstruction after the war. These will preserve all the historical buildings which still remain intact and yet take advantage of everything modern planning has to offer. The plan described on these pages has been prepared by Mr. J. Paton Watson, the City Engineer, and Professor Patrick Abercrombie, Consulting Planner. They have had a unique opportunity in one respect: the enemy blitz of 1941 devastated hundreds of acres in the centre of the city and thus gave the planners a clean sheet. The most spectacular proposals deal with this part of the city. The plan, as a whole, proposes a number of "precincts" or "neighbourhood groups"

(Continued below on left)

WHAT THE GERMAN BOMBERS DID TO THE CENTRE OF THE CITY DURING THE AIR ATTACKS OF 1941—
dropped by the raiders. The new



A MODEL OF THE PROPOSED CITY CENTRE. The area covered by these plans is now a waste, so that the planners will have a free scope to put twentieth-century ideas into practice unhampered by any outside considerations



AT THE PRESENT MOMENT A

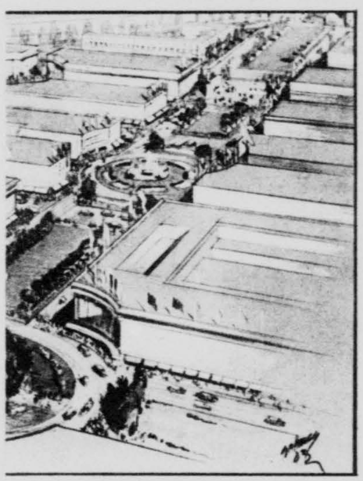
When the plan now under consideration by the Corporation is realised after the war, it is intended that Plymouth will afford a striking example of a Victorian city completely modernised, with a Medieval and Tudor enclave preserved as far as possible in its pristine character. Reconstruction is proposed over a wide area, including practically all the City Centre,

A BIRD'S-EYE VIEW OF THE PROPOSED CIVIC CENTRE, looking towards the Hoe and the Sound: The Civic Precinct begins on the plane of St. Andrew's Church, which is now a mere shell, but which will rise again. Near by will be the other Precincts—the Shopping Centre and Traffic Centre. The whole of the centre of the city will be rebuilt, with spaciousness, dignity and modernity as the keynotes. On the historical side, the Old Town clustering round the harbour of Sutton Pool will remain—to remind citizens of the great splendour that was—and is—Plymouth

carefully placed around the City Centre, and divided by green belts and parkways. It also suggests new and spacious traffic routes, with a high-level bridge across the River Tamar, and liberal housing. Each of the "neighbourhood centres" will have its own institutions and easy communications between the business and industrial quarters. The Plymouth of the sea-dog days will be retained intact because, miraculously, the Old Town largely escaped the havoc of the blitz

AN ARTIST'S SKETCH OF THE PROPOSED SHOPPING
buildings and interspersed with circular
considerable acreage to serve the

THIS PAGE IS DECLASSIFIED IAW EO 13526



The area around Spooner's Corner, in the heart of Plymouth, where many acres were simply obliterated under the weight of high explosives and incendiaries and spectacular proposals of the city planners principally revolve around such devastated regions

WILDERNESS OF DESOLATION—The wrecked area around George Street, in the city's heart, which will spring to life again only after the war

where civic buildings and shopping streets and many residential quarters have been razed to the ground. Victorian Plymouth, exemplified in the French-Gothic Guildhall and Municipal Offices, and in the shopping streets built on the edge of ancient roadways, will be replaced by a twentieth-century Plymouth. Formerly, on the sites shown in the two panoramic views above, stood a warren of buildings intersected by narrow and tortuous lanes and streets. These will give place to the new City Centre (on the site of the old): "the centre itself is the most obvious feature of the future Plymouth, but perhaps not essentially the most important," say the planners. "That is the Precinct principle, which will prevent for ever the repetition of the most objectionable factors in nineteenth-century development." Inside the boundaries the planners visualise several residential Precincts, each a unit with its own institutions and a community centre; each surrounded by a green belt of parkway or cultivated land. The historic Plymouth—the city of the sea-dogs—will remain intact. Plymouth has insisted that this core of its history and symbol of its ancient origin shall not be razed

CENTRE—a great Central Way flanked by modern open spaces. The Centre will cover a very needs of a large modern city

THE PROPOSED TRAFFIC CENTRE AT THE MAIN RAILWAY STATION. This drawing shows the great Way stretching from the space before the proposed Station Hotel, right through the City Centre, to the Hoe itself. This Centre would be a background to the whole of central Plymouth

The FUTURE of the VOLUNTARY HOSPITAL

In the Light of the New National Health Service, and the Trials and Difficulties which Lie Ahead

By CHARLES GRAVES

IN the welter of excitement about post-war civil aviation, the Second Front, Pay As You Earn and prefabricated houses, Great Britain is in danger of losing one of her most priceless heritages—the voluntary hospitals. For that is what is likely to happen if the new National Health service, as defined by the recent White Paper on the subject, becomes law. The gravity of the situation is shown by the fact that the British Hospitals Association actually held a Press conference at Claridge's last week. Until now, the hospitals have continued on their way without paying any real attention to any efforts to affect their future. I did not go to the Press conference myself, but I have endeavoured to find out the exact position as it is to-day.

The story begins in October 1941 when Ernest Brown, then Minister of Health, made a speech in the House of Commons on the policy of the Government to co-ordinate hospital services. "When this is done," he said in effect, "there will be an opportunity for placing on a more regular footing a basis of partnership between the voluntary hospitals and local authorities." Two months later, at the annual meeting of the Edward VII Fund, Mr. Brown spoke very highly of the contributory scheme which provides the voluntary hospitals with so much of their income. Nothing happened for over a year. Then it was disclosed that a comprehensive health plan was being worked out at the Ministry, and a White Paper on the subject was foreshadowed. The British Hospitals Association talked it over and then waited anxiously for the White Paper. This was finally on sale to the public on February 17, 1944. Its publication was greeted with wild enthusiasm by the national Press, and not surprisingly it was said that this plan to make comprehensive medical facilities available to every citizen—*free*—completely out-beveridged Beveridge. And it is certainly true that on page 12 of the White Paper the following sentence occurs: "The new service will be free to all, apart from possible charges where certain appliances are provided."

A whole month passed before any reference was made to the scheme in Parliament. Whereupon both Lord Woolton and Henry Willink, K.C., the present Minister of Health, had to admit that it should never have been suggested that the scheme would be free. In column 429 of *Hansard*, March 16, 1944, occurs the following passage from Mr. Willink's speech: "In one or two places in the White Paper the word 'free' occurs. . . . It is not an appropriate word. . . . Service of this kind has to be paid for—it cannot be free. . . . Everyone will pay for a service for everyone, and by three means—taxation, rates and the social-insurance contribution. . . . The only sense in which the word 'free' is appropriate—and I do not really think it is appropriate at all—is that there will be no charge to those who use it, when they use it, or because they use it."

Unfortunately, owing to the small size of present-day newspapers, little or no attention was paid in the Press to this sensational admission by the Minister of Health, and the general public still believes that it is to have free medical treatment from the hospitals in the comparatively near future. As a result of this, it is natural that subscriptions to the voluntary hospitals are already showing a marked drop. It is only human for people to stop paying for something which they are told is going to be free. That is one reason why the voluntary hospitals are in such a state of agitation; but there is another one. The White Paper makes it look as if the new health service scheme will squeeze the voluntary hospitals out of existence. On the face of it, the latter emphatically approve a comprehensive health service available and accessible to all, but they disapprove of the suggested methods of providing it. There is no assurance that they will be able to survive the proposal that local authorities should be solely responsible, with the Minister of Health, for planning and administrating the whole hospital service in their area.

This proposal, indeed, looks very much like the thin end of the wedge, for if the local authorities extended their own service very widely, the time would come when it might be suggested that the voluntary hospitals had become redundant. This possibility becomes a probability when it is realised that there is no provision or guarantee that the experience or suggestions of the voluntary hospitals will be properly utilised by the local authorities. It is true that the Minister of Health has reiterated the assurance that the Government appreciates the importance of preserving the voluntary hospitals, but he did not say that it would be necessary for them to have full and proper representation in the formulation of the plan and maintenance of the hospital services in their areas. He went on to say that he was sorry if the Government plan destroyed the contributory schemes in their present form; adding, however, that they would receive generous recompense, because the White Paper proposes that they should receive in future slightly more than they received pre-war from this source.

The voluntary hospitals themselves point out that for years their income has been increasing. In 1925, for example, it was £9,400,000; whereas in 1940 it had risen to £17,000,000: of which nearly £2,000,000 came from legacies and £10,000,000 from contributory schemes and payment for services rendered.

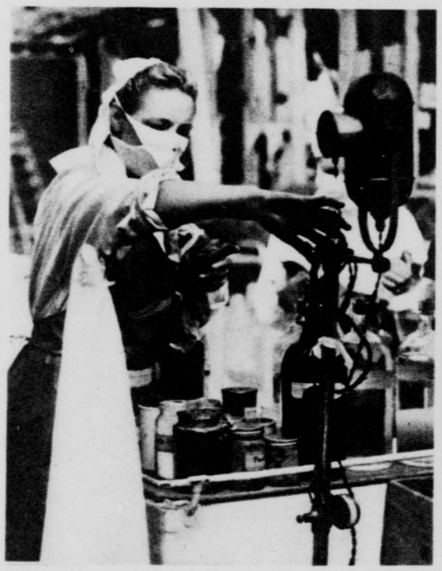
In a way, they have only themselves to blame. How often have we seen heartrending appeals for hospitals "falling down," for hospitals which needed so many pennies a second to keep them going? These hysterical posters and advertisements have led the public to believe that the hospitals are bankrupt, and it is sheer pity and affection for them which causes the average man in the street to think that the best thing which could happen to them would be for them to have a large certain income.

The hospitals will be hoist by their own petard if the public does not quickly realise that in fact the voluntary hospitals' income has always exceeded their running expenses in spite of their moans. Indeed, their spokesmen now reveal the fact that their capital assets, covering buildings, sites, equipment and invested funds, may be estimated at something between £250,000,000 and £300,000,000.

Now that this vital information has been disclosed, it is necessary to explain to the public what they would lose if the voluntary hospitals went under. This would certainly mean the loss of their inestimable spirit of independent research which leads to the continuance of fresh discoveries and advances in the treatment of the sick and the prevention of sickness. There is not a doctor in the country (except for alien refugees) who was not trained as a medical student in the voluntary hospitals.

The big teaching hospitals are a definite part of our national life, with the traditions of centuries behind them; they are responsible for the supply of doctors and nurses; they have to try and supply new knowledge. As Lord Dawson of Penn said: "The voluntary hospitals have certain qualities due to their history and traditions which cannot be erected *de novo*. Experience and authority have gathered round them; they represent the elite of the profession; they are the goal of man's ambition. There is something in their tradition which cannot be reproduced."

I hope I am not giving the impression that the voluntary hospitals are adopting a dog-in-the-manger attitude towards the Government proposals for a new health service. On the contrary, they welcome it. But their years of experience teach them that for it to be successful they must have full representation at each stage in the planning and maintenance of the scheme; which could easily be achieved by establishing a central hospitals board as well as local hospitals councils, each composed primarily of representatives from local authorities and voluntary hospitals.



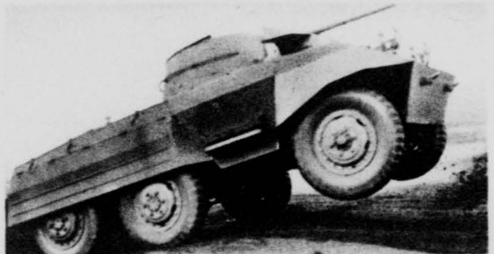
But even this would be inadequate unless they are allowed to continue to secure voluntary support and patients are given the complete freedom to choose their hospital—subject, of course, to the availability and adequacy of the service at the hospital selected. Most important of all, they realise that it will take five or ten years before the grandiose new scheme can come into operation.

Houses will come before hospitals. It will take years to recruit and train the extra doctors, anæsthetists, dentists, nurses, and others that will be required. And the question of nurses is perhaps the most ticklish of all.

People forget that every extra doctor or specialist has to be backed by nurses—not just one nurse, but a great quantity of them. No scheme can be put into force without an adequate supply of nurses. You always get back to this same problem; and the problems in the nursing profession are becoming more complex as time goes on. Rushcliffe has done a fine job of work in reforming the scale of payment and hours of off-duty, but the Rushcliffe Scheme is a very small silver lining to the cloud of difficulties. Take the question of midwives. Only about one in six actually practises, the reason being that so many posts require the certificate without the holder ever being called upon to practise what she has learnt. And now there is an outcry because so many women are unable to get this very necessary service.

The authorities are trying to force the women holding the certificate to practise, although this is the last thing they wish to do. Another scheme is afoot to force nurses who have just finished their training to take up midwifery or else they will be drafted wherever they are needed, which is usually only the sanatoriums. In these days, nurses can be drafted, kept in a hospital against their will, forced to do whatever the authorities want. This is probably necessary, but it does not attract women into the profession.

What is more, when a nurse gets into trouble there is no official organisation to which she can turn for protection. All doctors have the B.M.A. to which they can turn when they get into trouble. But not so the nurse. The tendency has always been to sacrifice the interests of the nurse in favour of the hospital. I am just a layman stepping in where the expert fears to tread but personally I think there should be a B.M.A. for the nursing profession which would really watch their interests.



NURSES INTO BATTLE. Two pictures taken after a recent air raid on London. Both these pictures were taken at the same municipal hospital the morning after a German raid on the London outskirts. Eight wards were demolished, a dozen patients were killed and five members of the staff suffered a like fate. Above, a nurse, wearing a face-mask, is salvaging some of the dispensary equipment: on the right, helmeted nurses are bringing out hospital equipment, using wheel-chairs for the purpose. All the nurses and hospital staff behaved admirably during and after this appalling tragedy

NEW ENGINES of WAR—ALLIED and ENEMY

AN ARMOURED BRIGADE ON THE MOVE IN ENGLAND : A complete train-load of Loyd carriers on their "Conflats." When an armoured brigade moves across country by rail, special trains are run to carry the tracked vehicles and their crews. The tanks and transports move to the station under their own power and drive on to the train. Tanks are carried on specially designed trucks known as "Warwells." These have twelve wheels and a weight of just over 29 tons. Lighter vehicles, such as carriers, are conveyed on trucks known as "Conflats"—ordinary "container" trucks with the box removed

THE "ARMOURED GREYHOUND"—a new weapon of the U.S. Army : Endowed with the speed and manœuvrability of a motor-car and the protective armoured construction of a light tank, the American Army's new vehicle has been dubbed the "Armoured Greyhound." Designed as a scout car, it is able to hit the enemy at long range with its 37-mm. anti-tank gun and 30-calibre machine-gun, observe operations and withdraw at good speed. Here the new tank is shown with two wheels in the air as it demonstrates how easily it can operate over a rough terrain. The tank is only 7 ft. high and it is operated by a four-man crew

NAZI "BUTTERFLY" BOMBS IN THE BEACHHEAD : A picture which shows the case in which they are dropped from the air. Two British soldiers at Anzio are here exhibiting the interior of the bomb-case. The "Butterfly" anti-personnel bombs fall a pre-determined distance before the case is shot open and its great number of small delayed-action bombs are released, to fall among personnel in bivouac areas and elsewhere. They often lie for a day or longer before exploding

THE AMERICAN ARMY'S NEW MILITARY VEHICLE, THE M-8 TANK : This mounts a 75-mm. howitzer and a ·50-calibre anti-aircraft machine-gun. It is here rolling forward during a demonstration of its combat technique. Army officials have disclosed that the M-8 is being used to form a "combat team" with American M-5 tanks, lobbing its mortar-shells into concealed enemy positions which cannot be reached by the low-trajectory shells fired by the M-5

A NEW-TYPE FAN WHICH INCREASES THE EFFICIENCY OF AMERICAN WAR-PLANES : A faster rate of climb, higher cruising speed, bigger load and better performance at altitude are made possible for this dive-bomber and other U.S. aircraft through the development of a new engine-cooling fan. Here the many-bladed device may be seen just behind the propeller and within the engine cowling. By eliminating much of the drag caused by older methods of cooling, the rate of climb of planes fitted with the new fan has been increased by as much as 20 per cent. In some twin-engined aircraft it has been possible to increase the load carried by as much as 10,000 lb.

FOUR GERMAN SHELLS WHICH HAVE BEEN RECOVERED INTACT IN THE ANZIO BEACHHEAD : They are (from left to right): 150-mm. (6-in.); 180-mm. (7·2-in.); 210 mm. (8·4-in.); and 280-mm. (11·2-in.). An American sergeant is holding up a stick marked off in 6-in. lengths to give an idea of the size of the specimens. The 280-mm. shell has a nosecap which is estimated to add 24 ins. to its length. Round the body are raised strips which fit into the rifling of the gun-barrel, the gas seal being obtained by a narrow copper band at the base end of the raised strips. The 280-mm. shell is believed to be the largest used against the Allied troops in the beachhead

NEW LAMPS and OLD

A Fortnightly Causerie on Life and Letters

By JOHN GORE

CRICKET!—What a title . . . in the midst of war and social revolution, after five long years of bleak and dingy austerity during which the unforgiving minute has been forced up in price to astronomical figures and has not been obtainable even in the black market. *Cricket*. The drowsing scene, the heat shimmer on the green turf, the white-clad, brown-armed fieldsmen and the swallows darting between, the sun standing still high in a blue heaven innocent of death, and men in straw hats in their thousands grouped round the grass edge with all the long summer's day to spare to the niceties of a national game peculiar to Britons. And, oddly enough, this pastoral idyll would produce burning moments of an excitement far more intense than a Battle of Britain or a London Blitz. Moments of Time which strong men could not endure, thrills too fearful for the imaginative to watch, Jessop's famous fireworks, Tennyson's scratched seventy against the all-conquering 1921 Australians, Fowler's Eton and Harrow match. . . . Does that race still exist which could squander time and squander emotion as for so many decades in our dim past our race quite often did? Can that reign of Saturn dawn again on the stricken field; or is Time for ever to be rationed and the sky never more to be blue and innocent? (You observe that I count only the *sunny* hours. Rainy days at Lords afford a more doleful story, better forgot.) You have read the findings of the Select Committee? Which committee? National Education, Town and Country Planning, War Criminals, Public Health? No, Sir. *The* Select Committee presided over by The Rt. Hon. Sir Stanley Jackson otherwise Jacker on *The Thing that Matters*, the Select Committee appointed by the M.C.C., at the request of the A.C.C.C., to settle the form of County Cricket after the war is over. And if you would seek proof of the unconquerable spirit of Englishmen and the inextinguishable faith and optimism of Man, search for your evidence between the lines of this report drawn up at the time . . . when it was drawn up!

For sheer beauty, simplicity, blind faith, optimism and sanity, was there ever such a report issued by a Select Committee? It is quite long, it covers a wide cricket-ground, touches on a score of abstruse and vital questions, and every recommendation on every single issue is governed and confirmed by one golden rule and principle: *Turn back the clock.* Wash out the past. Back to the reign of Saturn, before these wars and the dingy, commercial 'tween-wars era robbed that reign of its innocence and space and dignity and leisure, when England was merrie, cricket cricket, and Time a domestic servant, with a good character and good humour and devoted to its employers.

Turn Back the Clock. The Select Committee unanimously recommends that County Cricket must start again on the first practicable day after the Armistice. It shall not be played on Sunday. The M.C.C. will *not* press for the demobilisation of cricketers on special priority or essential State service! There shall be no more eight-ball overs. The over shall go back to six balls. Appeals against the light shall be eliminated—decisions left to umpires. Fast wickets are the best for cricket, and groundsmen must no longer dope. Nature and war will have done much to undo artifice, and the natural conditions of cricket in W. G.'s heyday should rule in the first post-war years. In between the lines one reads clear evidence that county captains must henceforth ensure that cricket is played as cricket was played in the great days of old and Alfred Mynn; not as League Football, not on Hollywood standards, not as a trade, as a test of endurance, as an historical episode, but as a game, a recreation for all concerned and only incidentally to provide a living for a few.

The pattern of all cricket reminiscence is conventional. It's a *conservative* game. Unless Time "stands still," it cannot be played as it should, though that fact may not justify old fans in tampering with the hands and seeking always to put them back. But so it is. We sigh for the "great days" and magnify the giants of yester-year at the expense of the giants of yesterday.

And did you once see Shelley plain? Certainly, mine eyes have seen the glory of the coming in to bat of W. G. I saw him first and last in his last appearance in first-class cricket at the Oval in 1908; I forget why I was able to be present. I don't think he did anything notable. I remember his beard and the roar that greeted him. Years before that I used to be lured to the Oval by the banner headlines in the Strand: "Marvellous bowling by Richardson." Years before that the seeds of cricket were sown in my soul-soil by the old great-uncles and by my father, who had laid the foundations of country-house cricket when I Z. was still a mere child and played its games out on a rough pitch near the Round Pond on Wimbledon Common, over against "the house where I was born."

The Ideal Team. Now, one fact may perhaps lend colour to my inevitable and conventional *nostalgie* for the "great days" of cricket. I am not going to pretend that the giants of old were, man for man, greater than the giants of the 1920's or '30's. Comparisons are odious and foolish, and Grace and Shrewsbury and Trumper faced different conditions to those faced by Bradman and the protagonists of both sides in the years between. I will merely set down the fact that the first Test Match I ever saw (the first of the 1902 series, at Birmingham) brought into the field for England a team which for sheer balance, merit and *economy* must even to-day strike the ideal-team maker as something near perfection.

It wasn't good enough to win. The rain won; but it would have won handsomely if "Old Sol" had been in the ascendant. This was the batting order: MacLaren, Fry, Ranji, Jackson, Tyldesley (J. T.), Lilley, Hirst, Jessop, Braund, Lockwood, Rhodes! *N.B.*—No. 11, even then, was a good enough bat for No. 1 of an England side.

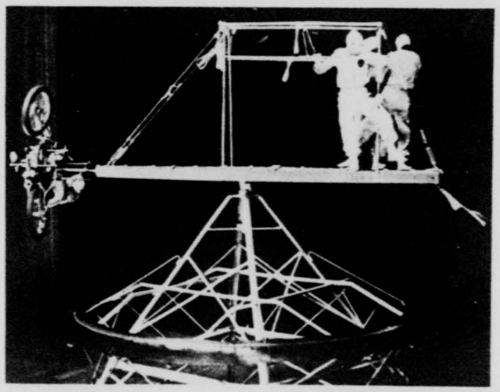
That eleven of great batsmen included four of the best bowlers we ever produced in their genres—Lockwood, Hirst, Rhodes, Braund. Jessop and Jackson were both Test bowlers proven, so that of that eleven, seven were Test-standard all-rounders, if we include Lilley as keeper and batsman. It had the greatest "cover" of all time, and three of the greatest slips of all time in Ranji, Braund and MacLaren. Indeed, if Time stood still and all cricketers of every generation were here to pick from, you would be hard put to it to reject any member of that side for a substitute from the ranks of later or earlier giants—on an ideal basis of team balance and economy-cum-merit.

You may say, and perhaps will say, that in choosing a team for a 1930's Test different conditions in wickets, bowling technique, and so on, would demand changes from that ideal side. That, I think, is in the minds of the Select Committee of 1944. Conditions to-day and to-morrow ought not to be such as to justify any changes from that ideal eleven of forty-two years ago: the changed conditions of wickets and technique and spirit have not been good for the game, and the clock should be put back to the conditions which obtained at the dawn of this bitter, troubled century when the marriage of science and tradition was enjoying its honeymoon.

In cricket, as in all else in our social life, commercialism and elaboration have been the prime disturbers of our peace.

It's an inviting argument, which begs many vital questions. Economics enter the field—a ruthless dictator.

Time—the old chap with the scythe, who presides over the green acres of Lord's with surely deliberate significance—settles the fate of all games. Can we ever expect that Time will again be released from rationing control, and that watchers and players will clamp him high in the blue heaven while the timeless cricket of the great days fills the hearts of the public and the columns of the Press with thrills and sensations enough to satisfy the most avid of sensation-mongers? Timeless cricket, but played with an eye on the clock, and under the sun, and in the spirit of . . . cricket.



The New London Stage Productions

Reviewed by PHILIP PAGE

THE REST IS SILENCE (Prince of Wales).—This gloomy but impressive drama is Mr. George Black's most valuable contribution to the serious theatre so far. I have never been able to understand this penchant for making plays out of the trial of Madeleine Smith, though of the several I have seen this is by far the best. To me the most interesting part of the whole business is that the beautiful Madeleine, who was tried in 1857, died as recently as 1928. Miss Ann Todd played her with tragic intensity and had no difficulty in reminding us that history records that Madeleine was extremely lovely. Particularly good performances by Mr. Martin Walker and by Mr. Karl Stepanek, who vanished far too early.

"FLARE PATH" IN CAIRO, WITH ITS LONDON CAST. The famous West End play by Terence Rattigan is now playing to crowded audiences at the Royal Opera House in Cairo. Here is the group of players taking part in the production: from left to right—Leslie Dwyer, Kathleen Harrison, Billy Thatcher, Ivan Samson, Emlyn Williams, Robert Elson (standing on table), Adrienne Allen, Leueen McGrath, Emrys Jones, and Eliot Mason

ACROBATICS AT 50 M.P.H. which have been thrilling Londoners at the Stoll Theatre Circus. Ernest Staig and his "Flying Australian Air Aces" have been giving Londoners a thrill with their novel act at the circus which has been running at the Stoll Theatre. Staig is twenty-seven years old: he is assisted by three others—Joe Kozanich, Billy Sawyer and Sid Simple. All have broken bones of one sort or another in this 50 m.p.h. act. Ernest Staig and his brother (now a Flying Officer in the R.A.F.) first thought up the idea in 1935: since then, except for a period when Ernest was in the Army, it has been played all over Australia and New Zealand. The insurance premium for this act is exceptionally high. The "roundabout" costs over £1,000 and takes four hours to erect. After getting up a speed of 50 m.p.h., the three men on the platform lift the motor-cycle off the runway and Ernest then somersaults as he flies around in mid-air. The great problem at the moment is petrol: an allowance of half a pint per day is being received for the act

Guilty (Lyric, Hammersmith).—More killing in the fairly long ago, with costumes and scenery to match, at the reopened Lyric Theatre, Hammersmith. *Guilty* is founded on *Therese Raquin*, which has also been seen in London before. Here, again, I would hesitate to call it a great or even a good play. But in this case it is beautifully produced, holds the attention throughout, and is chiefly notable for the performance as Therese of that fine actress, Miss Flora Robson, who has chosen this rather odd way of celebrating her return after a long absence in Hollywood, which is quite a long way from Hammersmith.

Jill Darling (Winter Garden).—Yet another revival. But no killing in it, unless Mr. Arthur Riscoe makes a few people in the audience die with laughter. I have never seen this fine musical-comedy comedian so richly funny, and the show wears extraordinarily well. Pretty little Miss Carole Lynne sings well and has oceans of charm. The ideal leading-lady.

PICTURES of WARTIME LIFE in BRITAIN

"WILLOW RUN," IN LONDON, where American officers dine out on trays for 2s. 6d. No plates are seen on these tables: the meals are served in trays indented like hors-d'œuvre dishes, with six sections for different foods

THE "WILLOW RUN" DINING-ROOM is decorated with portraits of the leaders of the four big Allied nations. Women officers, as well as men, have the right of entry here. Some time ago the skating-rink at Grosvenor House, in London, was converted into a huge mess for the use of American officers. It is run on cafeteria lines, each man collecting his own food. High-ranking officers line up for their meals together with young Lieutenants—"First come, first served" being the order of the day. Amongst its patrons the mess is known as "Willow Run," the long line of moving customers suggesting the assembly line at Ford's great bomber factory. No separate plates are used; everybody eats out of six-troughed trays. The charge for dinner is 2s. 6d., and for this the officers receive steak, chips, vegetables, roll and butter and Dutch apple-pie

A NOVEL SIGHT IN THE STREETS OF CHELTENHAM: Shopping by means of a goat-cart. Mrs. E. D. Petherd, of Cheltenham, regularly uses this "British Saanan" goat for shopping in the town. The goat gives no trouble in traffic or when left outside shops. Mrs. Petherd also lends her outfit to give rides to sick children and for collecting for the Guide Dogs for the Blind Fund

THE NEW WARTIME HAIR-STYLE WHICH IS SWEEPING BRITAIN: Already the rage in America, this new style is now becoming popular in England. It is called "Maria," and was worn by Ingrid Bergman in the film *For Whom the Bell Tolls*. As it requires no clips or pins, it is suitable for women in war factories or the Services. At the crown the hair is 4 ins. long, and at the nape of the neck as short as 1 in. In the picture above, Mr. Charles Plumridge is seen demonstrating the new style

A RUSSIAN BALLET SCHOOL IN BUCKINGHAMSHIRE. Young dancers rehearsing before a full-length mirror for a series of performances in London

THE SMALLEST MEMBER OF THE TROUPE: Madame Legat is the widow of the famous Maître de Ballet of the Imperial Theatre of St. Petersburg and Moscow. Her pupils recently gave a week of dancing at a London hall. The youngsters train in ideal surroundings at Seer Green, near Beaconsfield, and in fine weather do their dancing in the grounds of the School in the open air

MISS ROSALIND COX HANDLES THE GRAIN CROP. Wheeling a sack of ground beans on Bignor Farm, near Pulborough. On a 2,000-acre farm near Pulborough, in Sussex, twenty-eight-year-old Rosalind Cox is tackling one of the most unusual jobs ever undertaken by a W.L.A. member. She has sole charge of the giant £1,100 grain-drier installed last spring in an ancient granary. Maintenance of the massive and complicated machinery, and all oiling and greasing, are done by Rosalind. She joined the Women's Land Army in 1939, and before the war worked as a fur saleswoman at Peter Jones, London. Her fair hair, blue eyes, height and sturdy build make her a good example of an attractive English girl who is leading an outdoor life

The World of Books—By Vernon Fane

NEW AND INTERESTING NOVELS

An Enjoyable Comedy-Farce; Farming in Wartime; William Blake as a Left-wing Politician; Miss Alice Campbell's Gory Thriller; an Introspective Mystery Story

To find a genre, to prove that it was rewarding and to stick to it, was, in the past century, an ambition that many writers and artists achieved, though, even in the heyday of Victorian Academies, there were those bold spirits who said that when you had seen one sheep in a snow-storm, you 'd seen them all. Now a bolder age calls for variety, and writers particularly seem stimulated by that call. Miss Barbara Goolden is the newest adventurer in a totally different style, for with COMMUNITY SINGING (Heinemann, 7s. 6d.) she successfully attempts comedy-farce, and seems to enjoy herself in the process.

Her Mr. Alfred Chuter, for instance, is a pleasantly comic creation: comfort-loving, but no sybarite; timid, but determined; and a tremendous respecter of his own privacy. Mr. Chuter is, *en plus*, a Civil Servant, and his enforced evacuation from the London lodgings, where he has lived for twenty-nine years, to the pretentiously highbrow atmosphere of a country house, is a little difficult for him to bear. The attempts of two literary spinsters to remake his point of view in all matters social and spiritual has its hilariously funny side, since, needless to say, Mr. Chuter Remains Himself.

The coincidences of fiction being what they are, Mr. Chuter finds that a fellow-guest in this bijou residence is Queenie, his long-lost daughter, and that she is engaged to a young man in the R.A.F., who is none other than the husband of Polly, the servant-girl who has committed bigamy three times since his genuine marriage to her. And if that sounds muddled, it 's because it 's that kind of plot.

But it 's all a lot of quiet, rather frail fun, and even if facetiousness raises its ugly head from time to time, it 's still mildly agreeable.

Mr. Duncan McGuffie is a young farmer who took over a derelict farm and, with the help of an intelligent manager, got it back into production in record time, the whole thing being accomplished during this war. In CABBAGES AND COMMITTEES (Faber, 7s. 6d.), Mr. McGuffie gives an account of his progress at this farming, at market gardening and as a member of his County Agricultural Committee.

One of Mr. McGuffie's activities has been to give short, informal lectures to members of the Women's Land Army, and these, by his own showing, were as instructive to him as to his listeners. "What do you like a farmer to do when he walks round?" he once asked them, and they answered that, first of all, they didn't like farmers who came round on horseback, and they didn't like farmers who drove round, peered at them through the car window and then drove on. But that they didn't object to "farmers who told them off."

The author of this book is a farmer first and a writer second, or maybe even third, but his brisk style (the book was written in only two months) and his crisp self-confidence suit the new style of mechanised farming, and many of his principles are the result of a mental attitude that owes as much to far-sightedness as it does to common sense.

It 's all in the way you look at it, as one has been told by various philosophic busybodies since childhood. And different writers, one finds, have the most surprisingly different ways of looking at the same subject. Mr. J. Bronowski, for instance, takes William Blake "out of the literary wrappings which have so long effectively concealed him," and presents him as a child of the Industrial Revolution—in effect, a Left-wing politician.

This interesting study forms the basis of A MAN WITHOUT A MASK (Secker and Warburg, 8s. 6d.), in which the poet-artist-prophet is seen in relation to the industrial evils of his time. Blake was born in 1757, and for most of his life was obliged to earn his living as an engraver, when the demand for good individual products had given way to the products of industry. He sympathised with the principles of the French Revolution, was tried for sedition and acquitted. It was the painter Samuel Palmer who wrote of him that he was "the man without a mask."

Rather than a personal and critical study of Blake, Mr. Bronowski has chosen to write chiefly from a political point of view, and the result is an ingenious, but somehow narrow, analysis.

MAINLY ABOUT DOGS . . .

SERGEANT SALLY and her owner: Wilma Clizbe, of Detroit, is working with the American Red Cross at a London club. She is the owner of a Cairn which is known to thousands of U.S. Servicemen here. Sergeant Sally has been a mascot to several divisions of the U.S. Army, including an airborne division. She has a specially made overcoat which she wears on all important occasions and which bears many different insignias. Sally was bought by her present owner in Bath in 1942

ORDINARY SEAMAN SPUD is the mascot of one of the Royal Navy's aircraft-carriers which took part in the recent action against the German battleship Tirpitz. Spud saw the aircraft take off for the attack, and he saw them come back. Here he is, complete with home-made identity disc, awaiting their return to the ship

THIS IS JUST A PLAIN CIVILIAN DOG! He has been given the job of guarding the "catch" made by his two masters fishing in the muddy waters of a Hampstead pond. Apparently, the terrier finds the contents of the jar a fascinating spectacle!

I have an elderly acquaintance who holds that all self-respecting and sea-going parrots should have learned to chant the phrase "Buckets of blood! Buckets of blood!" before they are admitted to any genteel home. It gives, this lady will say dreamily, a certain tang to the atmosphere.

It gives too, parrot or no parrot, a certain zest to the pages of a mystery story, which is a literary territory too far invaded by logicians and the ballistic boys. Miss Alice Campbell's new book, TRAVELLING BUTCHER (Crime Club, 8s. 6d.), is an apt example of the thing properly done. Each page implicitly, though fortunately not literally, drips with gore, and there are gleaming razors, severed heads and inexplicable smells.

There is also a very adequate plot, in case anyone should suppose that this kind of thing is easy to do. An English aristocrat, avaricious and not unlike that parrot in her personal attractions, buys antiques in order to resell them to that vast and legendary market made up of gullible American millionaires. Neither the death of her husband, nor the injury of most of her friends and relatives during a London blitz, deters her, and she moves her treasures out to a lonely Dorset cottage with perfect sangfroid and an admirable grasp of organisation.

Before she leaves London there is one particularly nasty murder, but that is as nothing to what follows in Wessex, the whole thing observed by a charming young American girl, who is in daily and nightly fear of her life. Even in the middle of all this, though, it occurred to me that there is nothing that gives the reader such an involuntary shiver as that little tap-tap against an uncurtained window in the dark. And Miss Campbell is one who knows her tap-taps.

There is a death or two in CLUES TO CHRISTABEL (Joseph, 9s. 6d.), but this is otherwise a vastly different affair of reflection and introspection, very well handled in its own considered way. Christabel is a young and popular writer who dies, apparently, of a clearly diagnosed fever. Her best woman friend is commissioned to write the biography, but when she comes to make her preliminary notes, she finds that nothing definitive can be written without referring to Christabel's own diaries, and these have been left to Christabel's family, who refuses to let her see them.

The mystery then starts to stir, and to creep through the house like a miasma. Why, to begin with, had Christabel decreed in her will that the house should be shared by her family and that friend of hers whom they all resented? What had dear Christabel been up to when she closed the diary with a single page in Greek characters which none of them but Christabel's childhood friend could read? Who strangled the plain and ineffectual cousin?

Miss Mary Fitt shows a fine appreciation of suspense in handling all this, and eschews the obvious without being too fancy about it. Even her murderees live their brief terms as human beings, and there is a refreshing absence of either a hero or a heroine.

TO-MORROW IS FOREVER (Heinemann, 8s. 6d.), or *Total War Comes to Beverly Hills*, as it might be sub-titled with permissible levity, is a pleasantly written novel dealing with two of life's major issues, with all the competence and sophistication of a first-class manicurist. Readable, yes; and even rather winning, since all the characters are such well-mannered, clean-living people, but as far from life in the past four and a half years as Tierra del Fuego.

Now, I submit that none of this would matter in the least if this novel were about a different or exotic kind of human being, but it is not; it is about a comfortably placed middle-class family. Or about a different period in time, but it is not; it is about 1941. Or about a race whose customs we have little chance of comprehending without years of study, but it is about Americans. Therefore, I found it profoundly irritating.

For Miss Gwen Bristow's skill in creating atmosphere, handling dialogue and suggesting emotional tensions I have nothing but admiration.

Once upon a time . . .

. . . . while the car was still nosing its way through the mud we used to hear "BET WITH BILL BARNACLE! Evens Dusty Carpet! Two to one bar one!" We loved Bill Barnacle as we loved everything about our point-to-point; the picnic lunch, the excitement of the start, the wild thrill as at last two riders came neck-and-neck over the hill. It was as English as a slice of Stilton and as strong to the taste. One day, we shall arrive there in our little plane and, when we do, our tweeds and the pleasant things that go with them will come from

10/- feeds one child for 10 days.

25,000 meals provided every day.

Cheques, etc. (crossed), payable "Dr. Barnardo's Homes," should be sent to 20 Barnardo House, Stepney Causeway, London, E.1.

"In the present state of medical knowledge..."

The doctors of the Golden Age were the sun and the good fresh air, and man's leisure to enjoy them. As life became more complex it imposed an increasing strain on human nerves—a strain which has perhaps reached its climax in the last few years. That is why even the strongest nervous system to-day must be kept adequately supplied with organic phosphorus and protein—those two essentials which spell nerve health and vitality. In 'Sanatogen' Nerve Tonic organic phosphorus and protein are chemically combined, in the form most easily absorbed by the system. If you are feeling tired or run-down ask your chemist if he has a tin of 'Sanatogen'.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THE FIRST TACTICAL AIR FORCE (Prov.)

I. INTRODUCTION

1. Operation "ANVIL/DRAGOON" was mounted by Free French and U.S. Forces, from North African bases in mid-July 1944. Landings were made on the Mediterranean Coast east of Marseille. After securing control of the Marseille port area the main troop movements were to the north through the Rhone-Saone valleys. No effort was made to clear the SW quarter of France of German forces. The trapped German Forces were assigned to the Provisional French Government as a French project. In U.S. correspondence their project was known as "Operation Independence".

2. The Allied ground force units which came north up the Rhone-Saone valleys were under the command of General Jacob L. Devers. The chief ground force units were the U.S. 7th Army with General Patch commanding, and the French 1st Army under the command of General Jean de Lattre de Tassigny. The U.S. Air Force tactical units which came up the Rhone-Saone valleys from the Mediterranean Theatre of Operations (MTO) to the European Theatre of Operations (ETO) were the XIIth Tactical Air Command under General Gordon Saville, and the 42nd Medium Bomber Wing under General John Doyle. The French Air Force tactical unit which moved to France from North Africa was the First French Air Corps with General Gerardot commanding.

3. First contact between the "ANVIL/DRAGOON" force patrols and General Eisenhower's "OVERLORD" forces was made in the vicinity of Dijon (165 mi. S.E. of Paris) about 11 September 1944. The 7th U.S. Army made firm contact with the 3rd U.S. Army (Gen. Patton) 21 Sept. 1944 at Epinal (200 mi. ESE of Paris).

4. When the Rhone-Saone valleys had been cleared of German troops, the forces from the Mediterranean Theatre of Operations passed to the command control of General Eisenhower. These included the 7th U.S. Army, 1st French Army, XIIth Tactical Air Command (U.S.), 42nd Medium Bomber Wing (U.S.), the First French Air Corps, and the logistical support units which accompanied those tactical organizations.

5. A Sixth Army Group, Gen. Jacob L. Devers commanding, was established to exercise command control over the 1st French Army and the 7th U.S. Army. A First Tactical Air Force (Prov) was established, by direction of the commander, U.S. Strategic Air Force - Europe (USSAFE) to exercise command control over the XIIth TAC, First French Air Corps, the 42nd MB Wing and the Air Force support units which had come up from the MTO. General Ralph Royce was the original commander of the 1st TACAF (Prov).

6. By mid-September 1944 the front of the Sixth Army Group extended, from a point about 20 miles east of Nancy (180 mi. E of Paris) to the Swiss border along the west side of the Vosges mountain range. The First French Army was assigned to the south portion of the Sixth Army Group Sector. Headquarters of the First French Army were in Besancon (200 mi. S.E. of Paris). The 7th U.S. Army occupied the north portion of the Sixth Army Group Sector, with Headquarters in Epinal (200 mi. ESE of Paris). To the left (north) was the Third U.S. Army. Gen. Patton's headquarters were at Metz (180 mi. ENE of Paris). Ref. I-A-1 Map of France 1: 2,000,000.

7. General Devers selected, as the site for the 6th Army Group Headquarters, the spa town of Vittel in Vosges Province (170 mi. ESE of Paris). The Germans had commandeered the better hotels in Vittel for military purposes, hence they were available for U.S. military usage. The German Headquarters had been moved to Colmar, in the Rhine valley, as the U.S. Forces came north from Marseille. Ref. Ex. III 1 Map of France 1: 1,000,000. Ex III 3 Map of Vittel Locality 1: 100,000.

8. The 6th Army Group Headquarters was set up in the fancy L'ermitage (Hotel) which had been well maintained by the Germans. It was situated in the NE outskirts of Vittel and was surrounded by a golf course. The Grand Hotel (with Casino) was in the center of town. It had been used by the German as a hospital, hence was assigned to similar usage by General Devers. Ref. Ex. III 4,5: Brochure and town plat of Vittel.

9. The building assigned to the First TACAF, as a Headquarters, was the Hotel des Thermes, which was 200 yds S.W. of the Grand Hotel. The Hotel des Thermes had been used, by the German, as a concentration camp for Jewish aliens who were, at the outset of the war, traveling in Europe on British, American or South American passports. It was surrounded by a triple tier barbed wire fence about eight feet high. It had not been well maintained by the German.

10. The writer of this report was unaware, when he first appeared to look over the building assigned to house Headquarters 1st TACAF, that it was still fully occupied. The U.S. soldier guard at the gate warned me to expect trouble and provided an armed escort. When I entered the door I was surrounded by a swarm of irate people. All they wanted was for me to stop fighting the war, remove the restrictions on their movements, give them some U.S. money and U.S. cigarettes, and provide truck transportation to the nearest port. I hastily withdrew and left the problem with the American Red Cross, which was already working on a movement plan. Subsequently, I had an opportunity to visit Baden-Baden where the non-Jewish aliens were detained. They were well provided for and in no great hurry to leave. They were glad to see the Allied troops, and were pleased with the results of our military operations.

II. THE SIXTH ARMY GROUP

11. The 6th Army Group commander (Gen. Devers) had as Chief of Staff M/G David Barr. Col. Henry Cabot Lodge was his Liaison Officer with the French War Ministry. The combat forces under Gen. Devers command consisted chiefly of:

   a. The U.S. Seventh Army (Gen. Patch) composed of 3 Corps (VI, XV, XXI) with a total of 12 divisions.

   b. The First French Army (Gen. Jean de Lattre de Tassigny) composed of 2 Corps (I,II) with 7 divisions.

   Ref. Ex. II B-7.

12. The terrain feature of the Vosges Mountain range favored the Germans and severely limited the avenues of approach to the Rhine Valley for the Sixth Army Group. The two main access highways to the French Rhine provinces were:

   a. The Besancon - Mulhouse Road thru the Belfort Gap on the south end of the Vosges.

   b. The Nancy-Strasbourg road thru the Saverne Pass on the north end of the Vosges.

   The mountain road from St. Die to Strasbourg was not suitable as a main road for troop movements nor for transport of heavy equipment.

   Ref. Ex. III Map: Strasbourg Area 1: 500,000.

13. To the French First Army was assigned the task of clearing the Belfort Gap. In this assignment they had the advantage of neutral Switzerland being on the right. To the U.S. Seventh army was assigned the task of clearing the Haguenau - Strasbourg area in preparation for a crossing of the Rhine. In this assignment there was always the risk of a German thrust from the Siegfried Line, in the Saarbrucken/Pirmasens area, to cut the Nancy-Strasbourg road.

14. The sector assigned to the Sixth Army Group on the east side of the Rhine was approximately an eastward extension of our sector on the French side of the Rhine. There were no vital industrial areas in the 6th Army Group Sector of Germany. The cities of Freiburg, Stuttgart, Augsburg and Munich were not vital to the German war effort. The only prospect of interest to the 7th U.S. Army was that of Hitler retreating to a mountain redoubt near Berchtesgaden (S.E. of Munich on the North slope of the Alps).

III. THE FIRST TACTICAL AIR FORCE (Prov)

15. By mid-October 1944 the affairs of Headquarters, Allied Expeditionary Air Force were completed and the U.S. personnel of the AEAF staff were available for reassignment elsewhere. General Spaatz indicated that he had, in prospect, a requirement for several general officers and colonels for the headquarters of a proposed provisional Air Force in eastern France. This opportunity had very limited appeal to most of the USAAF officers who had been on duty with Hdqts., AEAF. First choice with them was duty with Gen. Eisenhower's SHAEF Headquarters, second choice was duty with Hdqts. 9th Air Force, and next choice was return to the U.S.A.

Ref. V-31, V-33.

16. By 31 October 44 the SHAEF Staff had drafted a French Re-armament Program (Air). Shortly thereafter General Eisenhower verbally authorized General Spaatz to issue U.S. Strategic Air Forces-in-Europe orders attaching U.S. Air Force and French Air Force tactical and service units to the First Tactical Air Force (Prov). The function of the 1st TACAF was to provide Air support for the 6th Army Group.

Ref. Ex: IG-5, IIA-1, IIC-13, IIC-14
A-23, A-24, A-25, V-35

17. By the last week of October 1944 decision had been made by General Spaatz on the squadrons to be assigned to the new First Tactical Air Force (Prov). He had also selected three General Officers and four or five colonels as a nucleus for the new organization Headquarters. To announce his decision on the appointment of a Commander and on the allocation of tactical squadrons, General Spaatz held a conference in his trailer office in St. Germain (Paris suburb) in late October 1944. In attendance were only; Maj. Gen. Hoyt Vandenburg (Commander 9th U.S. Air Force), Maj. General Ralph Royce, Commander designate of the new First Tactical Air Force (Prov), the writer of this report, and General Spaatz's WAC secretary Sally Bagby. Miss Bagby took notes and so did the writer of this report. Several weeks later we learned, in Vittel, that there was a discrepancy between the number of organizations assigned by the official published order, to the First TACAF, and the number orally stated by General Spaatz during the meeting with Gen. Vandenburg, Gen. Royce, and the writer of this report. The 9th AF was to get more squadrons than originally proposed by Gen. Spaatz. Gen. Royce accepted the adjustment without protest, but with the Commander of the XIIth Tactical Air Command (Brig. Gen. Gordon Saville) it remained a point of controversy for some time.

18. In early November 1944 the Hotel des Thermes in Vittel was cleared of its unhappy occupants by the American Red Cross. The barbed wire stockade fence was torn down, the building fumigated, and the place was ready to serve as headquarters, First Tactical Air Force (Prov). Manning of the Headquarters organization proceeded very slowly.

Ref. Ex. Ic-5.

19. The First Tactical Air Force (Prov) did not rate as one of the elite Air Force organizations of the European theatre of Operations. The elite group consisted of the U.S. 8th Air Force, U.S. 9th Air Force, RAF Bomber Command and RAF First Tactical Air Force. These organizations were permanent and would have a place in history. The First Tactical Air Force (Prov) was a bastard organization, which would pass into oblivion at the cessation of hostilities in the ETO. Morale of the personnel of Hdqts. 1st TACAF started off low and dropped as the temperature dropped. The Headquarters

building of the 6th Army Group in Vittel (L'ermitage) was a fine building with central heat and plenty of coal, which was very scarce. The Headquarters building of the 1st TACAF was an unattractive, ex-concentration campsite, with no central heating system and inadequate fuel for the room stoves. This was a substantial morale factor.

20. The tactical units coming under the operational control of the Commander, 1st TACAF were:

    a. 42nd medium Bomber Wing, Brig. Gen. John Doyle commanding, with Hdqts. in Dijon (75 mi. SW of Vittel).

    b. XIIth Tactical Air Command, Brig. Gen. Gordon Saville commanding, with Hdqts. in Nancy (36 mi. NNE of Vittel).

    c. First French Air Corps., Brig. Gen. Gerardot commanding, with Hdqts. in Besancon (70 mi. S of Vittel).

    Ref. Ex: IIB-8, IID-15

21. a. Mission control for the 42nd Bomber Wing was exercised thru the Wing Operations Office, as there were but two group offices to be notified.

    b. For the XII TAC, with its wide dispersal of tactical units on ten air strips, it was necessary to exercise mission control thru the communications facilities of the 64th Fighter Wing, which was, as of 2 Jan. 45, located at Nancy.

    c. For the First French Air Corps, mission control was nominally under the direction of Gen. Gerardot's Deputy for Operations. Actually the operations of the two French B-26 Groups were "coordinated" by Brig. Gen. Doyle of the 42nd Bomber Wing.

22. The tactical units which came under the operational control of the Commander, First Tactical Air Force (Prov) were as follows:

    a. 42nd Medium Bomber Wing: Two M/B Groups of four B-26 squadrons.

Groups	Squadrons	Sqdn. U.E.
17th Medium Bomber	34, 37, 95, 432	16 B-26
320th Medium Bomber	441, 442, 443, 444	16 B-26

    Ref. Ex: IK-14, IIB-8

    b. XIIth Tactical Air Command: Five Fighter Bomber Groups of three Squadrons each. One Tactical Recon. Group (Prov) of two squadrons, and one night fighter squadron. These organizations were:

Groups	Squadrons	Sqdn. U.D.
27 Fighter Bomber	522, 523, 524	25 P-47
50 Fighter Bomber	10, 81, 313	25 P-47
86 Fighter Bomber	25, 26, 27	25 P-47
324 Fighter Bomber	314, 315, 316	25 P-47
358 Fighter Bomber	365, 366, 367	25 P-47
69 Tactical Recon. (Prov)	111, 162	18 F-6 (P-51)
	34	16 F-5 (P-38)
Night Fighter	415	12 P-61

Ref. Ex: II B-8

c. First French Air Corps: Two Medium Bomber Groups of three squadrons each, two Fighter Bomber Groups, one Fighter Group, One Tactical Recon. Sqdn., One Photo Recon Sqdn.

Groups	Squadrons	Sqdn. U. E.
31 Medium Bomber	I/22, II/20, I/19	16 B-26
34 Medium Bomber	II/52, II/63, I/32	16 B-26
3 Fighter Bomber	I/4, I/5	25 P-47
4 Fighter Bomber	II/3, II/5, III/3	25 P-47
339 Fighter Wing	I/3, I/7, II/7	25 Spitfires
Tac. Reconnaissance	II/33	9 Spitfires
Photo Reconnaissance	I/33	16 P-38

Ref. Ex: IK-14, IID-15

d. A recapitulation dated 1 March 45 gives the following data on numbers of organizations and aircraft assigned to the First Tactical Air Force (Prov):

Class	Type Aircraft	Squadrons 12TAC	42BW	French	Total	No. of Aircraft - U.E. 12TAC	42 BW	French	Total
Medium Bomber	B-26		8	6	14		128	96	224
Fighter Bomber	P-47	15		5	20	375		125	500
Fighter Day	Spit			3	3			48	48
Fighter Night	P-61	1			1	12			12
TAC/R	F6 (P-51)	2			2	36			36
TAC/R	Spit			1	1			9	9
Photo/R	F-5 (P-38)	1		1	2	16		16	32
TOTAL ALL TYPES		19	8	16	43	439	128	294	861

Ref. Ex. IIB-11

23. It was the responsibility of the Commanding General, First Tactical Air Force, to provide air support to the Sixth Army Group. Because of the terrain feature of the Vosges Mountain range, about 70% of the 6th Army Group front presented very little opportunity for effective military action. Access to the Rhine Valley had to be either by skirting the north end of the Vosges range or thru the Belfort Gap on the south end of the Vosges mountains. Thus geography simplified the problem of coordinating the XIIth TAC effort with the effort of the First French Air Corps. The assignment of the XIIth TAC was to support the U.S. Seventh Army in its thrust along the Paris-Nancy-Strasbourg road. The assignment of the First French Air Corps was to support the First French Army in its thrust along the Besancon-Mulhouse road thru the Belfort Gap. There were very few occasions when there was a requirement for the XIIth TAC to work on targets in front of the First French Army or for the First French Air Corps to work on targets called in by the 7th U.S. Army. The 42nd Medium Bomber Wing provided the back-up force which could apply additional effort, when required, to supplement either XIIth TAC or First French Air Corps effort. The primary targets for routine 42nd Bomber Wing Missions were those beyond the range of the Fighter Bombers or targets requiring high yield bombs.

24. The most interesting event of the November 1944 combat operations was the securing of the Belfort Gap by the First French Army. The Germans had a good defensive position there and had planted extensive mine fields. A German General, riding with aide and driver in his car, ventured too far forward and was picked off by a French patrol using a portable field gun. When the French troops closed in to survey the damage, they found in the General's brief case, diagrams of all the Belfort Gap mine fields and gun emplacements. Within three days the French Army was thru the Belfort Gap and in the Rhine Valley. We had then high hopes that the west Bank of the Rhine might be cleared of Germans by the middle of December. Actually we did not clear the "Colmar Pocket" until Spring.

Ref. V-40

25. By 22 November 44 the U.S. 7th Army (Patch) had moved into the Rhine Valley along the Paris-Nancy-Strasbourg road. In mid-December XIIth TAC took over the German airfield (concrete runways) at Haguenau, 20 miles north of Strasbourg, for use as a forward base. Our thinking, in early December, was that the German would shift his forces to the East in order to hold the Russians. We were then planning an Allied spring offensive which would result in a crossing of the Rhine and the encirclement of the Rhur - the industrial heart of Germany.

26. The German Ardennes offensive in Belgium began 17 Dec. 44. In Vittel no one believed that to be a primary offensive. On Christmas Eve a strong German armored Force moved out of the Siegfried line along the Pirmasens-Bitche road southward towards Phalsbourg (on the Paris-Nancy-Strasbourg road). This we believed to be the primary thrust. Actually the southward thrust was probably a diversionary attack intended to relieve the pressure being applied by the Allies on the German Forces in the Ardennes. The Sixth Army Group Commander was obliged to drastically realign his forces. The 1st TACAF endeavored to destroy the runways of the airfield at Haguenau (without success).

Ref: V-45

27. The Christmas week of 1944 brought to the staff, of Hdqts. 1st TACAF, the most dramatic experiences of the war. Whereas our tactical organizations had daily contact with the enemy, the personnel of the Headquarters organization had, until now, no threat of becoming involved in combat action. We had been living in a cold, dreary but quiet environment. At the end of December 1944 the WAC contingent of Hdqts. 1st TACAF was rather uneasy, but all were trying to face the uncertainties of the future like soldiers. It was a senior Colonel who came to the writer of this report with the request "will you take me with you in your airplane". When I indicated that I did not understand what he was talking about he replied "Eddie, you know what I mean --will you take me to Marseille with you. You know that we cannot stay here in Vittel unless we want to become prisoners of the Germans".

28. In early 1945 the Luftwaffe had ceased to be a serious threat to Allied Air Force operations. The new German ME 262 jet fighters had appeared and had displayed speed and rate of climb performance far in excess of the capabilities of the Spitfire, Mustang (P-51), or Thunderbolt (P-47). The ME 262 pilots refused to engage in aerial combat, but were content to whizz past Allied aircraft at an astounding speed. This mystery was solved, years later, when Adolf Galland's book "The First and the Last" appeared on the U.S. book market. Der Fuhrer had decreed that the Luftwaffe would not assume a defensive role, but that all sorties flown would be offensive strikes against Allied ground targets, a function for which the ME 262 was not qualified.

29. News of the ME 262 had a profound effect on the thinking at the Air Materiel Command at Wright Field, Dayton, Ohio. Col. Mark E. Bradley had been the Project Officer on the P-47, from its introduction into the Air Corps program, until the end of 1944. In early 1945 he was assigned to duty with the First Tactical Air Force in Vittel. His desire was to fly the P-47 in combat action, and if possible to engage an ME 262. He was accommodated with a well loaded P-47 and good mission assignments. At that time the only targets the Squadrons had on their boards were ground targets, such as highway traffic, railroad traffic, canal traffic, POL dumps and suspected troop concentrations. No data is available, to the writer of this report, as to Col. Bradley's record of hits and misses, nor is data available on his encounters with the ME 262.

30. It was probably Col. Bradley's hope that he might find an opportunity to serve with the Fighter Bomber Groups as Squadron Commander, Group Commander or Wing Operations officer. Unfortunately (for him) he had arrived in Vittel at a time when we had been forced to a recognition of an error of judgment in our manning of the U.S. Liaison Group at Hdqts. First French Air Corps in Besnacon. We had intentionally manned our Liaison Group with U.S. Air Corps officers who understood the French language.

31. The Commander First TACAF, was not satisfied with the daily effort of the First French Air Corps. General Gerardot was personally a very fine and conscientious officer, but the information he was getting seldom matched with the information which the Commander First TACAF was getting, thru his Liaison Group, as to the availability of petrol, bombs, ammunition, aircraft, spare parts and other essentials. It was, with the Liaison Group we then had in Besancon, impossible to establish the cause of a shortage in supplies, or indeed the fact of a shortage. The need for a new chief of the Liaison Group at Hdqts. First French Air Corps was obvious.

32. Decision was made that the designee for the position of Chief of the Liaison Group at Besancon would henceforth be a person who was not of French ancestry and would be one who did not speak French. He had to be an officer with the rank of Colonel, one who was experienced in the treatment of problems in a large and dispersed organization, and with a keen interest in and understanding of the combat organization requirements. As we wracked our brains, for a logical nominee, Col. Bradley completed his combat tour. When asked if he understood French he replied - "Not one word. I am tone deaf and cannot understand anything said in French". Here was our man for Besancon.

33. Col. Mark Bradley reported in to Gen. Gerardot with instructions to issue, in the name of the Commander First TACAF, any administrative orders required to bring order out of Chaos at Hdqts. 1st French Air Corps in Besancon. When Col. Bradley returned to Vittel, to make his first progress report, he announced that he had, thus far, issued only one order in the name of the Commander, First Tactical Air Force. That was "All women will be out of the male officers' billets by 10:00 p.m." This tale, (which is true) has a proper place in history. The rank and file of the First French Air Corps, had little real interest in the prosecution of the war against the German Armed Forces. They had been in virtual exile in North Africa. They were now at home in France after their long period of living in exile. Their primary desire was to enjoy life in France (French style).

34. In late January 1945 Maj. Gen. Ralph Royce returned to the U.S.A. at his own request. He had been in North Africa before coming to the European Theatre of Operations and must have figured that the German Army would soon be obliged to capitulate. He had in the U.S.A. a very important personal project which required his immediate attention.

Ref: V-48

35. General Spaatz designated Brig. Gen. Gordon Saville as commander, First Tactical Air Force, to fill the vacancy resulting from Gen. Royce's return to the U.S.A. Gen. Saville assumed his assignment with an unsettled issue on his mind. Some of the units which came up the Rhone-Saone valleys from the Mediterranean Theatre of Operations with the XIIth TAC and 42nd Bomber Wing, and which had initially been assigned to the First Tactical Air Force (Prov.), were finally assigned to the Ninth Air Force.

Ref: V-49

36. One of General Saville's first actions, on assuming command of 1st TACAF, was to dispatch a General Officer to Gen. Spaatz's Headquarters, with instructions to have the error corrected. Gen. Saville was quite unhappy when his emissary returned without having persuaded Gen. Spaatz to reconsider on the assignment of the Air Corps units which had come to the ETO from the MTO.

    Ref.: V-52

37. Within a day or two after the failure of the subordinate officer to secure a satisfactory adjustment in the assignment of the MTO squadrons, the Commanding General, 1st TACAF went in person, to present his case to Gen. Spaatz. Upon his return, the rumour was quickly circulated that "somebody" was going home. And that proved to be a fact. On a Sunday, 18 Feb. 45 I waited until the dining hall was empty, save for one man. I did not feel like discussing the war effort, which had bogged down, nor my own prospects. When I entered the dining room, the lone other occupant, Col. Brogan, the 1st TACAF Adjutant General, rose from his place and sauntered over to my side. With a long face and a sad voice he said "Well, the orders are in". My reply was "I knew they were on the way". But, said Col. Brogan, "you didn't know who they were for".

    Ref. V-52

38. Major General Robert Webster relieved Brig. Gen. Saville as Commander First Tactical Air Force (Prov) about 21 Feb. 45. He had come to the European Theatre of Operations (ETO) from the Mediterranean Theatre of Operations (MTO). Morale in the First Tactical Air Force was not high. The fact that the Headquarters organization was Provisional, and subject to dissolution when hostilities ceased, left all staff personnel with a well founded feeling of job insecurity. To add to our problems at the Headquarters level, this was the interval when General Gerardot was plagued by a lack of interest on the part of the supply and maintenance echelons of the First French Air Corps.

    Ref. V-52

39. By 21 Feb. 45 the line-up of the 6th Army Group (Gen. Devers) had been shifted. Gen. Patch's 7th Army (U.S.) was facing NE attacking the Siegfried Line from Saarbrucken to the Rhine. The west bank of the Rhine from Haguenau to the Swiss border was held by the French who had, at that point no interest in, nor capability for, crossing the Rhine in force. The telling of a true story may help to understand the French Army attitude. A major assigned to Hdqts. 1st TACAF asked permission to travel by jeep to Strasbourg. Permission was granted and a French Non Commissioned officer went along to act as guide and interpreter. When they arrived in Strasbourg, they parked their jeep well back from the river bank, and went on foot to the industrial area which stretched along the Rhine River. The U.S. Major was carrying a rifle which was a bit unusual for an officer. To give his guest a good view across the river the guide suggested that they go up in a grain elevator which was being used as an observation post. As our Major watched the activities on the east bank of the Rhine he saw a German soldier walking in an open area, and quickly raised his rifle. Before he could sight and fire a French officer took his weapon. In reply to the U.S. Major's query as to "WHY", the answer was simply "If you shoot at them they will start shooting at us".

40. An attack was launched 13 Mar. 45 by the U.S. Third Army (Patton), and the U.S. Seventh Army (Patch), on the Siegfried Line between Saarbrucken and the Rhine. By 25 Mar. 45 the Allied Forces had control of the west bank of the Rhine from the Swiss border to the lowlands of Holland. By 26 Mar. 45 Gen. Patch's 7th U.S. Army was crossing the Rhine in the vicinity of Worms. And about 1 April the First French Army crossed the Rhine about 20 miles south of Mannheim. Resistance of the German Army ceased to be effective after 1 Apr. 45. The U.S. 7th Army and the French 1st Army rolled across southern Germany with negligible military resistance being encountered.

41. During early April 1945 Gen. Devers decided to move Sixth Army Group Headquarters from Vittel to Heidelberg (50 miles S. of Frankfurt on Main). Gen. Eisenhower was to move his forward headquarters at about that time, to the I.G. Farben Industrie building in Frankfurt. The buildings of Heidelberg were practically undamaged by bombings, as all major structures had large Red Crosses painted on the roof to indicate that they were hospitals - which they were not.

42. General Webster moved Hdqts. 1st TACAF to Heidelberg about 10 Apr. 45. By that time our biggest worry was that we could not find profitable targets for the employment of our striking force in the area assigned to the Sixth Army Group. In an effort to improve our contact with the U.S. 7th Army and 1st French Army we attempted to set up a forward Headquarters at Meersburg on Lake Constance but could never make effective use of the facility.

Ref. V-57, IA-2

43. During the latter part of April 45 Gen. Devers lost control of the First French Army. General de Lattre de Tassigny occupied the city of Stuttgart and refused to withdraw into his assigned sector. This action was probably taken by direction of the French Government (De Gaulle).

44. During the first week of May 45 we received word that the First Tactical Air Force (Prov) would be de-activated, and its personnel and units would be reassigned. The 1st TACAF passed out of existence at midnight 20 May 1945. (V-63, V-64).

45. By mid-May 45 General Cannon had been designated to take command of the occupational Air Force. The writer of this report returned to the USA during the first week of June 1945. (V-64).

IV. OPERATION INDEPENDENCE

46. In late July 1944 the port situation of the Allied Expeditionary Force in Normandy was not satisfactory. The June storm had wrecked the American "Mulberry" (artificial harbor). The Germans had left the Port of Cherbourg as a shambles of wreckage and sunken ships. The Supreme Allied Commander (Gen. Eisenhower) decided to test the land side defenses of St. Malo, Brest, Lorient and St. Nazaire. St. Malo was taken in mid-August 1944 and Brest fell about 20 Sept. 44.

47. By early September 1944 there had been a great improvement in the port facilities available to the Allied Military forces. Marseille had been taken 28 Aug. 44. Antwerp was taken 5 Sept. 44 with its port facilities undamaged. The need for the Brittany Peninsula ports had ceased to exist. The success achieved in pursuit of the German Army required the full attention and resources of the Supreme Allied Commander. Gen. Middleton's VIIIth Corps was assigned to seal off the ports of Lorient and St. Nazaire. The ports of Bordeaux and Bayonne were left as problems of the French Government.

48. In October 1944 the Supreme Allied Commander did authorize the issue of gasoline, ammunition, and bombs (but not aircraft) to the French Forces being organized to clear the Bay of Biscay ports (Bordeaux and Bayonne) of German troops. The U.S. Forces named this French venture as "Operation Independence." The First Tactical Air Force (Prov) was designated as the U.S. point of contact for supply support of the French Air Force units which were organized to participate in "Operation Independence." Since we had a new supply account we had to have a name for it - thus was the "Western French Air Force" born. Headquarters of this new organization was appropriately, in Cognac (60 miles N of Bordeaux).

49. Group Patrie, with headquarters in Vannes (84 miles NW of Bordeaux) claimed to have five squadrons which were operated out of airfields as indicated below. Group Naval had two squadrons operating out of the airfields indicated in the following tabulation:

Group Patrie:

Squadron	Location	Aircraft	Unit. Equip.
Headquarters	Vannes	-	-
I/31 Bomber	Toulouse	JU-88	No Data
I/34 Bomber	Cognac	DB-7	No Data
II/18 Fighter Bomber	Toulouse	DEW-520	No Data
III/33 Reconn.	Cognac	Fieseler & Potez	No Data

Group Naval:

Squadron	Location	Aircraft	Unit. Equip.
Headquarters	No Data	-	-
VFB-1	Cognac	SBD-5	No Data
VFB-2	Cognac	SBD-5	No Data

Ref. Ex. I K14, II D16,17

50. There was no military requirement for, nor interest in, coordination of the activities of the First Tactical Air Force with those of the Western French Air Force. The "Operation Independence" venture was run under the direction of the War Ministry of the Provisional French Government which had been established in Paris.

51. It is doubtful whether the diversion of French Government attention to "Operation Independence" had an adverse effect on the Allied offensive against the hard pressed German Army. As a matter of fact the venture may well have been supported by the President of the United States. The French Government was in favor of adding a substantial contingent of French officers to the staff of the Supreme Allied Commander in Reims. The SHAEF staff was then a smooth running combined British-American organization with no language barrier, and no great diversity of philosophy. Guidance to the Supreme Allied Commander came only from a President and Prime Minister who were in accord on major items of policy and strategy, and who were in close communication with each other. The adding of a third man in the policy making level and a French contingent in the SHAEF staff level would have induced great risk of indecision and confusion at a critical stage of the battle.

52. "Operation Independence" was not an outstanding military success. Whilst many pockets of German troops were eliminated in southwestern France, the entrance to the Gironde estuary was not cleared until the war was over. The last group of German Armed Forces to capitulate to the Western Allies, after the death of Hitler, were those German troops who were "holed up" in bunkers in the sand of Pointe de Grave, 55 miles NNW of Bordeaux and 10 miles SW of Royan.

V. CONCLUSION

53. The Sixth Army Group has a proper place in history. The actions of the U.S. 7th Army (Patch) and the First French Army (de Lattre de Tassigny) in taking the port of Marseille and in clearing the lines of communication (rail and highway) of the Rhone-Saone valleys were important factors in the easing of our winter logistical problems (1944-1945).

54. After the 6th Army Group had turned eastward along the Nancy-Besancon line on the west side of the Vosges Mountains there were in front of us, no important military objectives. The war ended with the morale in the First Tactical Air Force (Prov) at zero level, as the program of reassignment of personnel was begun. The First Tactical Air Force (Prov) was deactivated 20 May 1945.

APPENDIX A

REFERENCE DATA

LISTING OF EXHIBITS

* * * * * * * * * * * *

Note For The Reader: The purpose of Appendix A is to provide a list of all exhibits which support the narrative of this report.

a. Exhibit File No. I (3-ring National Binder)

These items are remnants of the First Tactical Air Force Command "Blue Book".

b. Exhibit File No. II (2-hole Pioneer clip binder)

These are typical of the items carried by the writer on field trips to tactical and service organizations.

c. Exhibit File No. III (Multi-Fold Manila Envelope)

This is a map file.

d. Exhibit File No. IV (Single Fold Manila Envelope)

This file includes miscellaneous memorablia related to the First Tactical Air Force (Prov).

RELEVANT EXTRACTS

AIR AND V-MAIL LETTERS

* * * * * * * * * * * * * * *

Note for the Reader: Items which support specific statements are referenced to a paragraph of the narrative by a numeral under the date of the letter from which the extract has been made. Items with a zero under the date of the letter are not specifically referred to in the narrative, but are included in this appendix to provide a "contemporary thought frame of reference" for the reader of the report.

13 Oct 44 - V-31:
15

Both Ralph Royce (Maj. Gen.) and I are on the auction block. We have a tentative project that will, if it eventuates, take us out into the sticks (from Paris). Ned Schramm (Brig. Gen.) is also out of work, and expects to join us if our project goes thru.

20 Oct 44 - V-33:
15

...We still do not have the final word from General Spaatz which we need to send us out into the sticks.

20 Oct 44 - A-23:
16

When we move down into "the sticks" I will be a long way from almost everybody you know except Ralph Royce (M.G.), Ned Schramm (B.G.), Gordon Saville (B.G.) and Clarence Crumrine (Col.)

29 Oct 44 AM-A-24:
16

...Ralph Royce, Ned Schramm and I are setting up a new Air Force Headquarters called: First Tactical Air Force (Provisional) APO 656, New York. ---While I keep going to a lower authority level from Air Force Headquarters in Washington to an Allied Headquarters in England and France, and then down to a U.S. Air Force Headquarters up front, I am following the work to be done. First it was in Washington that the need was greatest. Then in the Allied Headquarters in England and on the Continent. Now the work load has petered out there, and the decisions are being made up front - so that's where I go. We will have with us the following people you know: Dache Reeves (Col.), Clarence Crumrine (Col.), Ralph Fisher (Col.), John Dean (Maj.) besides Ralph Royce, Ned Schramm and myself. We will have operational control of a French Air Force, but do not expect to have a mixed staff --- as we did when working with the RAF in the Allied Expeditionary Air Force. In the AEAF we used RAF and USAAF officers indiscriminately in staff positions. ... in this case, because of the language difficulty (and others) we will start out with a U.S. staff and a few French Liaison Officers ---. What I have told you is not secret. The German has so many spies and agents left behind that I am certain they will know all about the setup long before this letter reaches you. Our strategy includes no complicated secret moves. We are going to give him the old power play---. Last winter the Bomber effort (USAAF & RAF) had to be dispersed all over France and Germany, in preparation for our landing operation (in Normandy).

We did a swell job of messing up the French railroad system---. We also had to dump a lot of bombs on rocket site installations and depots in a defensive action. This winter we can dump thousands of tons of bombs where they belong - don't ever underestimate the influence of that factor ---. Much as I would like to come home, I do want to have a hand in the education of the German nation before I start back... I am taking this day (Sunday) off from work - for the first day off in several months---. I will move to the country (Vittel), to stay, on Tuesday 31 Oct. 44.

29 Oct. 44 FM-A25: 16 — On Saturday noon (14 Oct. 44) I walked into my office to get my mail, intending to go right to my apartment (in St. Cloud) but Ralph Royce (M.G.) pounced on me --- and told me to get started on building for him an Air Force Headquarters. So on Sunday 15 Oct. 44 I was sitting in my office, freezing, and trying to figure out what to do first---. On Tuesday 31 Oct. 44 I will go back down into the country to stay (Vittel, Vosges Province)---We will have the same APO number: 656 New York./

30 Oct. 44-V-35: 16 — I was going to the country tomorrow but Royce (M.G.) called up today to say that he would be up this afternoon, and wanted me to be here tomorrow (in Paris) for a conference with Spaatz (Gen.)

5 Nov. 44-V-36: 0 — When the German held the French coast in the Pas de Calais area he was looking down the Londoners throat. The tables are now turned, and we are certainly looking right down the throat of millions of Germans who live in the Rhine and Ruhr valleys. They are going to have a very rugged winter. --- The news in the paper is good - Rommel is dead, Sweden stops shipment of ball bearings to Germany, Hungary asks for an armistice, and 3500 tons of bombs went on Cologne.---.

6 Nov. 44 - V-37: 0 — I got back---from a trip by car to my new home (Vittel is in Vosges Province 40 miles from Chaumont on a bearing of about 80 degrees).

13 Nov. 44-V-38: 0 — After I had fixed things so we could use the old APO number---some helpful soul decided to do things differently---so we will use the APO number 374. Our new organization (Hdqts 1st TACAF) is not yet completely manned. I will have to go thru the same sifting process that we went thru when we were putting together the AEAF Headquarters, just a year ago.

20 Nov. 44-V40: 24 — The current French military success around Belfort (between the south end of the Vosges Mountains and the north slope of the Jura Mountains) was the result of a lucky fluke. The Germans had the French Army scared to death with their (radio) propaganda about their invincible defense lines. How the French found out that the Germans were bluffing is a good story. A German General Staff Officer, riding in his car with driver, ventured too far forward. His car was hit by a French shell. When the French troops closed in to survey the damage, they found, in the German Officer's brief case, diagrams of all the mine fields and gun emplacements.---As a result of the action in the Belfort Gap the whole situation in our sector (6th Army Group) has changed a lot in the past three days. If we can get across the hills (Vosges Mountains) and into the Rhine Valley, before real winter sets in, it will put us in a much more favorable position for our spring offensive. (Note: We did not clear the "Colmar Pocket" until spring.)

21 Nov. 44 - V-41: 0 — ...Things are not going too badly for us. We seem to be having all the luck, but what we are really doing is just giving the German the old power play, thru the center of the line - not much strategy but plenty of force. That is what the German did in the heyday of his power.

24 Nov. 44 - V-42: 0 — This winter will be the most peaceful and normal that London has known since 1939. It would have been the worst, had we not gotten up the "Rocket Coast" of the Pas de Calais. We have now driven the German back too far for him to make effective use of his current rocket models.

28 Nov 44 - V-43: 0 — I expect to see a lot of organizations, which are now in this theatre, returned to the USA, re-equipped and re-manned with a lot of young men, and then started to the Orient, leaving behind a lot of old men and old equipment. Actually, they will not need many men who are over thirty to run all the Headquarters we will have in the Pacific --- there is a lot of water surrounding Japan.---

29 Nov 44 - A-26: ---sent me a newspaper clipping of a big gas company fire in Cleveland. Seventy people were killed and 10,000 rendered homeless.---compare that with what happened to the German city of Freiberg---The RAF bomber stream took about twenty minutes to pass over us (in Vittel). They must have had 500 bombers each carrying at least four tons of high explosive and incendiary bombs.---I tell you this is going to be a bad winter in Germany.---we did have about six weeks of good bombing weather last winter, and hope for the same this winter.

15 Dec. 44-V-44: 18 — ---I know that all the bits of information I have passed to you, as to who is doing what and where, must have you thoroughly confused, so let me restate the information in one lump. Gen. Spaatz is in command of all Air Force Units in this theatre. His title now is Commanding General, U.S. Strategic Air Forces in Europe. His Headquarters has been moved from St. Germain (Paris suburb) to a Rothschilds estate near Chantilly 25 miles north of Paris.
When the U.S. and French Forces coming up the Rhone-Saone valleys met up with the forces of Gen. Eisenhower's command near Dijon he took over control of all U.S. and French units in France. He left field command control of the U.S. and French Army units with General Jacob Devers (6th Army Group) and assigned command control of the USAAF units to Gen. Spaatz (U.S. Strategic Air Forces in Europe). By agreement with the French Government the First French Army was to be under command control of Gen. Devers. The First French Air Corps was to be brigaded with a U.S. Army Air Force unit for supply support. General Spaatz created the First Tactical Air Force (Prov) with headquarters in Vittel, Vosges Province. General Royce was named commander of the First TACAF (Prov.). They asked me if I wanted a job with Royce's new Air Force and I said "NO" - but I got it anyhow. There are but three General Officers in our First Tactical Air Force Headquarters - Royce, Schramm and Langmead. Gordon Saville (B.G.) and Glenn Barcus (B.G.) are with the 12th Tactical Air Command, which is a subordinate organization. I see Saville right often, but seldom see Glen Barcus (he was operating the radar tracking facilities of our sector). Dache Reeves (Col.), Clarence Crumrine (Col.) and Ralph Fisher (Col.) are working in OPS with Ned Schramm. On my side of the house I don't have anybody you would know.

27 Dec. 44 - V-45: 26 ---I went to the local theatre on Christmas Eve to see a USO show. Katherine Cornell was playing in the "Barrets of Wimpole Street." I was pulled out at the end of the first scene to take a long distance call and never did get back to the show. (Gen. Royce had called, from a forward base near Phalsbourg, 30 miles NW of Strasbourg on the Nancy - Strasbourg road. He directed that we destroy the runways of the forward air base we were using at Hagenau, 16 miles north of Strasbourg on the west bank of the Rhine. We were fairly adept at building airfields, but this was the first time we ever tried to destroy one. Our efforts were extremely unsuccessful. Actually, the German thrust from Bitche was a feint associated with the major German counter-offensive which was directed toward the Port of Antwerp from the Ardennes region in Belgium.)

17 Jan. 45 - V-46: 0 ---Don't let any newspaper columnist or news commentator get you discouraged about whether we are winning or losing, and whether somebody did or didn't pull a boner over here. The boner was pulled by a yokel named "Hitler". He did catch us a bit off guard, because nobody gave him credit for thinking up such a silly idea (the Ardennes offensive). The German has paid a big price for his losing gamble. Watch the Russian front for the decisive action. The game has progressed to the point where dramatic events are likely to take place within the next 45 days - not weeks or months, but days. (Our thought was that the most favorable strategy for the German would be to rapidly withdraw his forces from the western front and to hold the Russian Army at the line of the Oder. He could then capitulate to the Allied Forces under General Eisenhower's command and thus put the Western Allied Forces in a position of confronting the Russian east of Berlin. (We did not, at that time, realize that Herr Hitler was insane. Nor did we have, at our level, any understanding of the Malta Conference possibilities.)

18 Jan. 45 - V-47: 0 ---I am most optomistic about the current situation. The Russians are really queued up for a decisive thrust - and those monkeys are playing for keeps. Our Eighth Air Force has given the Russian offensive a degree of support that cannot be calculated at this time. While the Russians have been getting ready, for the next move to the west, the Eighth Air Force (and RAF Bomber Command) have been jimmying German plans for producing vital items such as oil, gasoline, steel, tanks, trucks, tires, and other essential munitions. If the Russians keep rolling it will be because the U.S. Army Eighth Air Force (and RAF) has effectively crippled German industry. Count 45 days from 15 Jan. 45.---

19 Jan. 45 - V-48: 34 In the midst of a war like this, one hangs on to one's life or one's job by a mighty thin thread, which at any moment may be snapped. I may be home sooner than I thought. Ralph Royce (Maj. Gen. Commanding 1st Tactical Air Force) got his ticket for home today. What he didn't do right, or did do wrong, I do not yet know. Whatever it was Ned (Brig. Gen. Schramm) and I cannot be far behind in getting consideration for the "Iron Cross"---. Whatever happens now I can look myself in the eye, in a mirror, and claim to have done, in behalf of our war effort, three separate and distinct jobs - and on all three I started from scratch, with no pattern to guide me. That, if I do say so myself, is a lot more than many people can say.

(Memo for record: actually Gen. Royce left the First Tactical Air Force at his own request. He must have figured that the fighting war was over. He had, whilst on duty in Cairo in 1943, met a Red Cross worker who had by Jan. 45 returned to the U.S.A. They were married in Detroit Saturday 10 Feb. 45 according to radio reports received in Europe on 11 Feb. 45)

26 Jan. 45-V-49: 35 — ---Gordon Saville (Brig. Gen.) is relieving Ralph Royce at the end of the week. Beyond that nothing is settled. Dache Reeves (Col.) is very unhappy because he feels certain that he is slated to go. ---Ralph Fisher (Col.) also expects to leave. What Clarence Crumrine (Col.), Ned Schramm (B.G.) and I will do is anybody's guess.---

1 Feb. 45 - V50: 0 — ---I am most optimistic about the prospect of decisive action within the next few weeks. Maybe I'll be disappointed this time, but we are certainly on the downhill stretch. I gather the impression from the newspaper (Stars & Stripes) that FDR has been near here recently (Malta). I hear that both Glenn Jamieson (B.G.) and Joe Loutzenheiser (Col.) were over here with the party.

7 Feb. 45 - V-51: 0 — ---By the time you get this all of the Germans should be out of the "Colmar Pocket" (on the west bank of the Rhine, midway between Strasbourg and the Swiss border), and back on their own side of the Rhine in our (6th Army Group) sector. There will be some regrouping of U.S. Forces and French Forces. Whether they will continue to keep this Provisional Air Force in being is a moot question... The Russians are now "Queueing Up" for a decisive action at the crossing of the Oder. If the German can hold the line until the spring thaws set in it may delay the action a few months, but not for long. I would not be one bit surprised to find out that the peace negotiations are now in progress somewhere.

21 Feb. 45 - V-52: 36,37,38 — I apparently have an indefinite, and temporary renewal of tenure of my job. For one very hectic period of 20 days Gordon (B.G. Gordon Saville) and I saw opposite sides of every problem that arose. When he had about decided that I did not amount to much we both were very much shocked to learn that he was being ordered home.---While life has been pretty rough for me I had not complained to Hugh (M.G. Hugh Knerr), nor discussed our difficulties with any one from Gen. Spaatz's headquarters (U.S. Strategic Air Forces in Europe.) Naturally Gordon felt pretty bad over having to leave at this time and under such circumstances. I think that he now feels that he did slightly exaggerate the magnitude of the difficulties we are having. Flora's husband (M.G. Robert Webster) arrived here today to relieve Gordon. What "Bob" has in mind for reorganization, if any, I do not know, as I was out on a trip today when he arrived to take over command of our Provisional Air Force. The fact that it is, and must always be, a provisional Air Force keeps us always in doubt as to when it will be dissolved. It is not in the War Department program and can be dissolved by Gen. Spaatz at any time that he feels it is desirable to do so. All (U.S.) combat and service units could be re-assigned to an authorized Air Force Command by Gen. Spaatz's order --

---That action would leave all personnel of Hdqts. First TACAF, fresh out of work. Actually I would not, in the least, mind having the whole Provisional Air Force disbanded. But I surely would hate to get fired for not knowing what to do or how to do it. I appreciate that there is always dissatisfaction with top personnel, in any organization, when the rate of progress is not satisfactory. Maybe I should be complimented for getting close enough to the war to be mistaken for one of the fellows who are running our side of it.---

21 Feb. 45 - V-53: 0 ---My prediction of big things to happen by the end of February was based upon the hope that we might be able to give the Russians a bit of a hand in the decisive action. We have not been able to do much to help so it has not worked out---on the schedule I had set up as a forecast. The pattern for the final actions must now be clear to everyone---. It involves no fancy strategy - just steady and unrelenting pressure on both sides, and from above. The end may be postponed, but the German has not the industrial capability to alter his fate. Spirit and courage will not propel shells out of field guns, nor drive tank engines during a fast moving battle.

25 Feb. 45 - V-54: 0 ---It is too early to tell what changes "Bob" (Webster) will want to make in his staff. Gordon (Saville) is leaving today, and naturally Bob hasnot indicated what instructions he got from H.H.A. (Gen. Arnold) or from Larry (Maj. Gen. Kuter) who we understand is running the show back there during the illness of H.H.A. We now have under way, according to Gen. Eisenhower's statement to reporters two days ago, an operation which could be the last of the war, if moderately successful. I think it will be. All we have to have is a decent break in the weather.

4 Mar. 45 - V-55: 0 ---Our war is going all right. If we can gain a toehold on the east bank of the Rhine, during the current confusion of the Gerams, the end will be just araund the corner. The Russians must be ready to move again, and that will add to the burden of the Germans. The heavy bombers are really putting the pressure where it hurts now.---

8 Mar. 45 - V-56: 0 ---(Col.) Dache Reeves' daughter was married yesterday, and the "Old Boy" was very unhappy over his not being able to get back in time for the event. He is in an awkward spot here, and had hoped that Ralph Royce (M.G.) could arrange for him to be ordered back to the U.S.A. Unfortunately Dache has played his hand very poorly---. He will not accept any job that is offered to him. Pickings are pretty slim these days, and one cannot afford to be choosey. It takes a lot less top rank to run an army, than it does to train and equip one starting, as we did, from scratch.---

12 Apr. 45 - V-57: 42 We have been in the throes of moving lately from Vittel to Heidelberg, Germany, and I have been spinning like a top. All people who come up from down where---'s husband and ---'s husband are seem to suffer from the same complex. It is difficult to find living and office facilities which suit in all respects. Right here, doing the typing, is one General Officer who has not stepped up his scale of living to the millionaire class just because there is a war on. Life east of the Rhine is marred by the enormous amount of destruction which one sees on every hand. The refugees treking along the road with all their wordly possessions in a little cart, with Pappa pulling and Momma and the kids pushing---.

Germany has taken a bad beating and deserves it, but that doesn't keep you from feeling a bit sick at your stomach as you drive along. ---Yesterday Brig. Gen. J.G. Williams reported in to our Headquarters for duty. He got his promotion to General Officer rank in the Flying Training Command---. He ranks both Ned Schramm and myself---. War is bad enough, but cleaning up the mess we've made does not appeal to me at all. The war has moved pretty fast lately and we (First TACAF) have had a tough time trying to keep up with the advances of the Ground Forces---.

13 Apr. 45 - V-58: O — Your husband may now be included among the unemployed. Gen. Webster announced today that Brig. Gen. J.G. Williams, who has just arrived (from the U.S.A.) will replace me. Plans for disposition of my carcass have not yet been announced. It will be several days before I will leave Williams to his own devices. I have agreed to stay on and help him break in on his new job.---I give his job three weeks to last, at the most. Since we have a Provisional Air Force our organizations will be absorbed into the Ninth Air Force immediately hostilities cease. Our work has been done, and we are now just coasting along. Our biggest worry is that we cannot find profitable targets for the employment of our striking force. I would like to see the combined Air Forces - heavy, medium and fighter bombers - all put on Berlin and Munich before we quit. We could erase the two cities in one day for each of them, and leave the remains as a monument to the cupidity and stupidity of the German Nazi party.--- I would like to go to London to help celebrate the end of the war. It will mean so much more to the English people than to the people of France - particularly those of Paris, who have not really suffered at all during the war.---

24 Apr. 45 - V-59: O — Believe it or not, I am in the famous town of Cannes on the French Riviera. I have long planned this trip, but on all previous occasions something interfered at the last moment. ---We will drive back, with a stop at Lake Annecy, and then pick up my trunk which I left in Vittel and move it up to our new Headquarters location in Heidelberg.

26 Apr. 45 - V-60: O — ---The friends I met (in Cannes) were two of the boys who helped to put the AEAF (Headquarters) together back in London. As a matter of fact one of the men (Lt. Col. Walter Maynard) was, when the AEAF broke up last fall, its oldest living inhabitant. If you see "Possum" Hansell, he will be interested to hear of Walter, as Maynard was, as a Captain, "Possums" assistant in planning the organization of AEAF. (Under Gen. Sir Frederick Morgan who established in Norfolk House, St. James Square, London, in mid 1943 a planning group which operated under the direction of the Combined Chiefs of Staff of Washington, D.C.)

2 May 45 - V-61: O — ---I was surprised to hear that Dudley Blossom is on his way over here. Actually I think it is a good idea to bring in a new crew of people to handle thepost-hostility phase of military activity in Europe. Those of us who have fought the war are going to be very short of patience when it comes to the clean-up phase. We have

thrown materials and equipment around with utter disregard for money values in winning this war. You have to do that - we use materials lavishly to save lives,---when the battle is over there is one big mess of jumbled accounts and property records that can never be adjusted. I propose to let the Newhalls and the Blossoms have it - whilst I catch up on my blueberry pie "A-La-Mode."

9 May 45 - V-62: 0

My letter writing schedule has been badly interrupted by a series of hasty trips around the country, which were required to line up the project of dissolving our Provisional Air Force.---I spent a couple of nights in Vittel cleaning up our business there, and then come back to Heidelberg---Thursday, 3 May I had to go to Rheims (Supreme Headquarters Allied Expeditionary Force.) There I had a very pleasant evening visiting a lot of people who used to be with me in Stanmore (Hdqts. Allied Expeditionary Air Force), and later when we moved Hdqts. AEAF to the continent (Jullouville - south of Granville on the west coast of Normandy).--- Friday it rained and we had low ceilings all day so Webster (M.G.) and I drove by car to Paris. Friday night I spent in the San Raphael Hotel, where I lived last fall when we first moved our office (from Jullouville) to Versailles. (Paris suburb).

16 May 45 V-63: 0

Germany is poorer looking than I had expected it to be, and the German people of Heidelberg are a sorry looking lot. Much to my surprise, most of them have black hair and are thin and scrawny.

16 May 45 - V-64: 45

---Bob Webster (M.G.) hopes to go back to Italy in about a week. Ned Schramm (B.G.) is angling for a job but hasn't lined up anything yet. I am left behind as the "Cleaner-upper", and hope to be through in about a month. Joe Cannon (Lt. Gen.) is coming up to take over the occupational Air Force. Hoyt Vandenberg (Lt. Gen.) is going home, and so is Hugh Knerr (M.G.)

21 May 45 - V-65: 44

Our Provisional Air Force passed out of existence at midnight last night.---I do not know the APO number of the XIIth Tactical Air Command, which was one of our subordinate (USAAF) Units, and to which I am assigned pending issuance of orders for me to return to the U.S.A.---I---expect to move up to Darmstadt (33 miles north of Heidelberg) where XII TAC Headquarters is located. I will not be there long.

Report on the

FIRST TACTICAL AIR FORCE (Prov)

Exhibit File No. I

(3 ring National Binder)

Note for the Reader — 1 Oct. 1967

This file supports a report prepared for the U.S. Air Force Historical Division. The items included herein are those which comprised the 1944/1945 Command Blue Book of the First Tactical Air Force (Prov.). The Blue Book was used chiefly during visits to other Headquarters. Unfortunately many of the items were discarded when the First Tactical Air Force (Prov) was de-activated.

Staff Study re:

RETURN OF AIR FORCE UNITS TO THE MTO

STATEMENT OF THE PROBLEM

1. Combat, Service and Ancillary Units which came to the First Tactical Air Force (Prov) from the Mediteranean Theatre of Operations (MTO) may be readied for redeployment in the European Theatre of Operations or returned to the MTO for redeployment from Italy. It is the purpose of this study to weigh the advantages against the disadvantages of a return of certain units to the MTO as a preliminary move in the ultimate redeployment scheme.

FACTORS BEARING ON THE PROBLEM

2. The primary factor appears to be that of ultimate destination. Units which are to be redeployed directly to the Orient, via Suez from Mediteranean ports, could be moved promptly to Marseilles upon cessation of hostilities and moved by LST and transport airplane to Italy. Such action would relieve the later congestion at Marseilles. The large port facilities available in Italy would be available to supplement the facilities of Southern France in loading east-bound shipping.

3. For units which are to be returned to the United States the preliminary move, by LST and transport airplane to the MTO, would be less profitable. The only gain would be derived from the employment of Italian ports in addition to the French and Belgian Atlantic ports. It may be assumed that Bordeaux, Cherbourg, Le Havre and Antwerp will be available for loading west bound U.S. shipping.

4. For units which are to be employed in the Occupational Air Force (OAF) in Germany a preliminary move to Italy would be definitely unprofitable in time and shipping.

5. Attached as Tabs to this paper are tabulations which indicate the redeployment schedule and destination of all units now included in the First Tactical Air Force (Prov).

Tab "A" : Complete Schedule for All Units

Tab "B" : Units of 1st TACAF which came from MTO

Tab "C" : Units to go to the Orient

Tab "D" : Units to go to the Occupational Air Force

Tab "E" : Units to go to the U. S. A.

6. It appears likely that the overseas service credit accruing to individuals who have come up from MTO may average higher than the IX Air Force level. If the units which came from MTO remain in ETO the application of overseas credit factors may operate to route individuals to the USA whereas return to the MTO might result in direct redeployment to the Orient.

7. It will be advantageous to reduce the number of Air Force Headquarters which have to deal with re-deployment plans. Return of units to the MTO and return of units to Ninth Air Force would facilitate the elimination of Headquarters, First Tactical Air Force (Prov). That organization will become redundant when the necessity for maintaining operational control over the First French Air Corps has passed.

8. Return of units at this time to the MTO will require a major overhaul of re-deployment plans by USSTAF and by the U.S. Army Air Force organization in the MTO. Unless some marked advantage in shipping or re-equipment will accrue from return of units to the MTO the advantage of stability in planning may be lost without securing a compensating advantage.

THIS PAGE IS DECLASSIFIED IAW EO 13526

CONCLUSIONS

9. The numbers of organizations which came from the MTO, and which are to be re-deployed directly to the Orient via Mediterranean ports, is small. Included in this category are only the following:

Unit	Destination & Month of Re-deployment	Strength Off.	Strength E.M.	Strength Total
42 Bomb Wing Hdqts & Hdqts Sqdn	2 - SWP	46	126	172
13 Photo Intell. Detach.	4 - SWP	43	49	92
324 Sig. Co. Wing	2 - SWP	3	86	89
	TOTALS	92	261	353

10. The bulk of the organizations which are to be redeployed from First Tactical Air Force to the Orient via Mediterranean ports originated in the ETO. For details see attached Tab "C".

11. The return to the MTO of units which came to First Tactical Air Force from the MTO will not result in a material saving of shipping or congestion of port facilities, but will facilitate the closing out of the affairs of the Headquarters, First Tactical Air Force (Prov).

12. It is probable that return to the MTO of units which originated in that theatre will require a major adjustment of ETO and MTO plans for redeployment of Air Force units.

RECOMMENDATIONS

13. It is recommended that the units which came to First Tactical Air Force (Prov) from the MTO be redeployed from the ETO.

3 May 45

FIRST TACTICAL AIR FORCE (PROV)
Statistical Control Section

1 March 1945
APO #374, U S Army

SUBJECT: Comparative Sortie Data.

TO : Deputy Commanding General for Administration.

1. In accordance with request, a daily comparison of sorties between Ninth Air Force and First Tactical Air Force has been compiled for the months of January and February and is attached.

2. Sortie data has been taken from First Tactical Air Force Cosums and while often inaccurate for a given day, there are usually compensating errors on another day and the results shown are assumed to be fairly correct.

3. In order to obtain comparative figures, Recces, Escort mission missions and defense patrols were excluded and only Bombing and Armed Recce sorties were used. In questionable cases the Ninth Air Force was given the benefit of the doubt.

HEADQUARTERS
UNITED STATES STRATEGIC AIR FORCES IN EUROPE
Office of the Commanding General
APO 633

18 March 1945

319.1

SUBJECT: Estimates of Effort

TO : Commanding General, First Tactical Air Force (Prov), APO 374, U.S. Army.

1. As a basis for efficient logistical planning, this Headquarters requires periodic estimates of effort by each Air Force under the administration of the U.S. Strategic Air Forces in Europe.

2. Accordingly, it is requested that your Headquarters submit by the 20th of each month a forecast schedule of estimated sorties per unit equipment aircraft, by type and model aircraft, together with estimated total gasoline and bombs (by type) expenditure. The schedule will show such estimates for each month of the succeeding six months.

3. It is understood that the reports so submitted will be, at the best, estimates only. However, they should be based on the best data available to you. Factors such as past experience, weather forecasts, intelligence information, etc., will be considered.

4. Emphasis is placed on the fact that these estimates will in no way be considered as commitments to be accomplished but will serve as valuable instruments in fulfilling the administrative, supply and procurement functions of this Headquarters.

s/ Carl Spaatz

t/ CARL SPAATZ
General, USA
Commanding

c. This Hdqts to estimate no. of operational days + set proposed type of operation. Subordinate units 2nd, XII th, Fr. 1st A.C etc. to make the computations
c. Fisher to monitor.

AV. GAS

HEADQUARTERS
I TACTICAL AIR FORCE SERVICE COMMAND (PROV)
APO 374

5 April 1945

MEMORANDUM:

TO : General Langmead

1. The following information pertains to gasoline stocks provided for operation "Independence."

a. The figures submitted by Colonel Reynolds on quantities of aviation gasoline at Cognac and Bordeaux were the amounts on hand as of the date of the memorandum.

b. Based upon estimates of requirements by the French Air Force for operation "Independence", Delta Base Section was requested to consign 555 tons of aviation gas to Cognac for the French Air Force of the West. We were advised by Delta Base Section that through error 800 tons instead of 555 tons of aviation gasoline and 32 tons of 1100 grade aviation oil were consigned to Cognac. The French later requested that we divert the shipment of gasoline and oil to Bordeaux which we have attempted to do. We have not been advised that the fuel has arrived.

2. The following information pertains to ammunition and bombs provided for or available to the French in addition to that shown in the memo from the Ordnance Officer dated 29 March:

a. 800,000 rounds of .50 ammunition is now in the Bordeaux-Cognac area and 84,000 additional rounds are enroute by train.

b. 500 4.5" rockets are enroute by train to the Bordeaux-Cognac area.

c. The transportation section is attempting to locate two trains, one containing 695 500 lb SAP bombs and the other 622 500 lb SAP bombs. There is some confusion as to where these trains are and to where they are bound.

3. The French Air Force has confirmed the fact that there is sufficient refueling equipment in the Bordeaux-Cognac area.

HEADQUARTERS
FIRST TACTICAL AIR FORCE (PROV)
APO 374

2 January 1944

SUBJECT: Proposed Troop Basis for the First Tactical Air Force (Prov)

TO : Commanding General, United States Strategic Air Forces in Europe, APO 633, U S Army.

1. Inclosed is a statement of units presently attached to this Command and the units it is felt are still needed.

2. The most critical need exists for the following units:
   a. Ordnance Maintenance Co AF
   b. Ordnance Depot Co Avn
   c. Engr Dump Trk Co
   d. Engr Avn Bn (2)
   e. QM Trk Co Avn (2) (1 to be POL)
   f. Hq, Tac Recon Gp

3. To illustrate the critical need for these units, it is pointed out in connection with the Ordnance units that in this Command there are approximately seven thousand (7000) automotive vehicles of which, at the present time, approximately five hundred (500) are deadlined due partly to lack of spare parts and partly to lack of fourth echelon maintenance facilities.

4. The really critical need for the QM Truck Co's was pointed out in our TWX, A-2469, dated 29 December 1944.

5. Our TWX EM 1801, dated 19 December 1944, explained the pressing need for two (2) Engineer Avn Bns.

6. Letter, this Headquarters, dated 23 December 1944, explained in detail the urgent need for a Signal Service Bn. The Signal Construction Bn (H) has also been previously asked for.

7. It is requested that prompt action be taken on this Headquarters' request for additional units.

For the Commanding General:

T. J. BROGAN
Colonel, AGD
Adjutant General.

HEADQUARTERS
UNITED STATES STRATEGIC AIR FORCES IN EUROPE
Office of the Commanding General

1 December 1944

321.01
SUBJECT: Administrative Control of Sub-Depots and Service Groups

TO : Commanding General, Eighth Air Force, APO 634, U. S. Army.
Commanding General, Ninth Air Force, APO 696, U. S. Army.
Commanding General, First Tactical Air Force (Prov.), APO 374, U. S. Army.

1. Effective 1 December 1944, Sub-Depots and Service Groups formerly subject to administrative control of the Air Force Service Commands, are placed under the administrative control of the Appropriate Air Force Commanders. The issuance of technical instructions only remains a function of Air Force Service Commands on combat stations.

2. It is desired that all publications be revised in accordance with the above change in administrative control.

By command of Lieutenant General SPAATZ:

/s/ Harris F. Scherer,
/t/ HARRIS F. SCHERER,
Colonel, AGD.,
Adjutant General.

Info copies to: Distribution A and
Commanding General, Base Air Depot Area, ASC, US Strategic Air Forces in Europe.

HEADQUARTERS
FIRST TACTICAL AIR FORCE (PROV)
APO 374

16 [illegible]

MEMORANDUM TO: General [illegible] Langmead

1. The fundamental policy of Redeployment centers around -

a. Unit organization
b. Personnel within units

2. Units will be redeployed as follows:

a. Those with longest overseas service to strategic Reserve in the U.S. where they may be inactivated.
b. Those with next longest overseas service to the Army of Occupation in Germany.
c. Those with the least length of overseas service to the Pacific Ocean Area (POA) or to the South-west Pacific (SWP).

3. Individuals may be shifted from one organization to another depending upon:

a. Service credit - number of months in the Army since 16 September 1940.
b. Overseas credit - number of months served overseas since 16 September 1940.
c. Combat credit - number of decorations and Bronze Service Stars since 16 September 1940.
d. Parenthood - number of children under 18 years of age. Credit will be given for children under 18 years of age as of the date of the cessation of hostilities in Germany but will not be allowed for more than 3 children.

4. The War Department has authorized the Theater to decide whether units will be redeployed based primarily on their length of overseas service or the length of overseas service of the personnel of the unit.

The Surrender at Rheims

GIs who were in on the historic meeting thought von Friedeburg was a "character," Jodl was "stiff-necked" and both should have eaten C-rations.

By Sgt. DeWITT GILPIN
YANK Staff Correspondent

RHEIMS, FRANCE—When Capt. Thomas J. Flynn of Jacksonville, Fla., told a detail of the 201st MP Company that they had been chosen for what he called a "big job," the men were not much impressed.

And they were considerably let down when they discovered that they were going to handle the guard detail of the high-ranking German officers who came here to surrender the German armed forces.

Celebrities have been the business of this particular MP outfit. For instance, Gen. Eisenhower calls many of them by their first names; some have dined at Churchill's home and besides, they had seen a lot of German bigwigs brought to Allied headquarters here previously. The last important German official they had seen before the surrender talks began was Fritz Von Papen, the long-time Nazi diplomat who, according to the men, "was just an old goat in golf knickers."

The five men chosen for what will probably rank as one of the most important guard details in history were Pfcs. Jack H. Arnold of Lancaster, Pa., Charles F. Trautner of Oakland, Calif., Joseph Fink of Detroit, Frederick A. Stones of Pittsburgh and Clifford Cleland of Plattsburg, N.Y.

They were not given any special instructions about the Germans, according to Stones, and he specifically remembers that nobody told them to salute.

"Maybe they thought we would know how to handle ourselves," said Stones, who used to manage an A and P store in Pittsburgh. "Anyway I waited until I saw a brigadier general salute them, and then I did. I didn't care much about saluting, and from the kind of salutes I got back from the Germans, they didn't either."

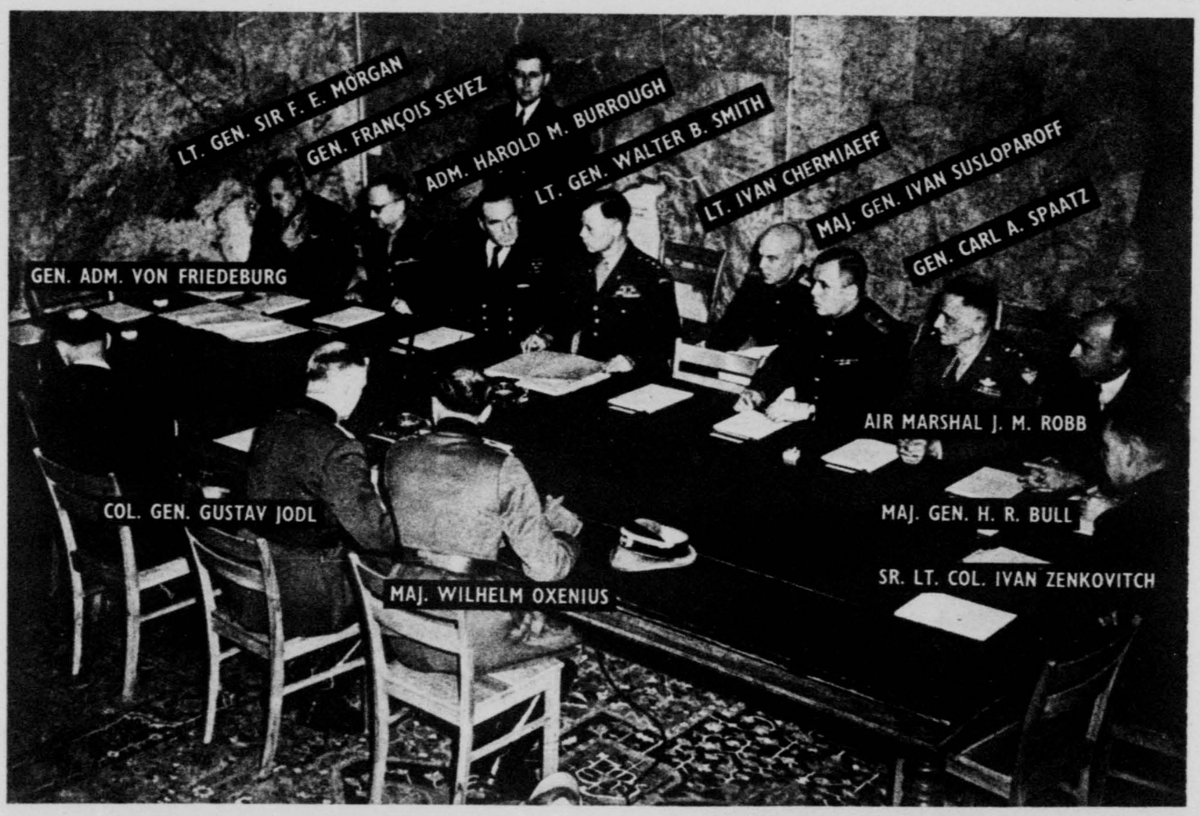
The German representatives who came to Rheims to sign the unconditional surrender document were Gen. Adm. Hans Georg Von Friedeburg, commander-in-chief of the German Navy and former submarine chief; Col. Gen. Gustaf Jodl, German chief of staff; Maj. C. S. Wilhelm Oxenius, Jodl's aide, and Col. Fritz Poleck of the German QM.

Gen. Jodl, the MPs say, looked and acted more like the popular idea of a German militarist than the others. He walked and talked with the arrogance that the Junkers have developed in a long series of wars; he didn't drink as much as the others during the negotiations, and before and after each conference the MP outside Jodl's bedroom could see him vainly examining his face in the mirror. After the last session of the conference on Sunday night, Jodl returned to his bedroom, looked down at Pfc. Arnold, who was standing outside, inhaled and then twisted and pulled at his face in front of the mirror. Arnold couldn't understand Jodl's apparent vanity because, he says, the general was nothing much to look at.

Like all MPs the men of the 201st were impressed with perfection in uniform, and the way that Col. Poleck and Maj. Oxenius wore their German officers' uniforms made Pfc. Arnold describe them as "really sharp articles who were certainly dressed fit to kill."

There was some talk of asking Col. Poleck, who was the only German officer who carried a sidearm during the talks, for his Luger. But no one ever had enough courage to do it.

Adm. Friedeburg impressed the MPs as what they called "a character." According to Fink, who used to help build Burroughs adding machines in Detroit, the admiral "had enough medals hanging on his chest to decorate a Christmas tree."



Fink rode in the car that brought the admiral to the German billets at 3 rue Carnot in Rheims. Accompanying Von Friedeburg in the car was an English major who, Fink recalls, brought the admiral up-to-date on current events by telling him the lights had gone on again in London. Von Friedeburg just replied that he "hadn't had a good night's sleep in a month." He looked it, too, Fink says.

VON Friedeburg also said he had been bombed out of his headquarters three times, and as the car rolled through the French countryside he remarked on the contrast with Germany, which he said must now be completely rebuilt.

While he was in his billets, von Friedeburg smoked beaucoup cigars and drank beaucoup liquor without improving his disposition any as far as the MPs could see. Once during a discussion of U.S. Army public relations he got angry and began pounding his fist on the table.

What made him mad, according to what table waiter Pfc. William Bittay told the MPs, was a copy of the *Stars and Stripes* with an atrocity picture from a German concentration camp. Previously the other Germans had spoken in English about YANK, saying, possibly just to be polite, that they thought it was a good morale builder for the U.S. Army and that the Sad Sack

As American, Russian, British and French military leaders watch, a German general in a schoolhouse at Rheims signs the unconditional surrender formally ending the war.

THIS PAGE IS DECLASSIFIED IAW EO 13526

is very funny. There are, they said, a good many Sad Sacks in the German Army.

But when von Friedeburg started pounding the table over the atrocity picture in the *Stripes*, the talk was all in German. Neither Bittay nor the MPs could tell whether he was angry at the picture or at the Germans responsible for the atrocity.

The house in Rheims where the Germans stayed between conferences at the SHAEF forward offices "looked like a shack on the outside and a palace inside," according to the 20lst men. There were fine paintings on the walls, an antique grandfather clock, inlaid tile in the bathrooms and comfortable double beds. Von Friedeburg took one look at the linen on the dining table and said, admiringly, the GIs thought, that the owner of the home "must be very rich."

There was one slight hitch before the first meal was served to the Germans because someone had forgotten the apparently necessary red wine. Enough wine was found in time, however, but Pfc. Stones said, "If I'd been running the thing, I'd have thrown them a can of C-rations."

As a matter of fact, Stones thinks, C-rations would probably have shortened the negotiations by several meals.

"One of the things that the boys talked about," Stones said, "the enlisted men, I mean, was that our guys up front were still getting killed while this was going on. And somebody said that they ought to have settled this thing by talking five years ago."

Pfc. Joyce Bennett of New York City, who acted as manageress of the Germans' billet, didn't agree and said that kind of talk was pretty shortsighted.

"I hate the Germans as much as anybody else," she said, "but this is what's going to end the war."

Everybody agreed about the ending the war part, but there was a lot of bitching at some of the work details. Once Pfc. Bennett asked two of the billet orderlies to straighten the beds of the German officers, and when they complained she said, "You've got to be diplomatic in a thing like this."

The orderlies, according to the MPs, said, "We're usually assigned to Air Marshal Tedder, who straightens up his own bed, and these guys can too."

Contrary to tradition, the English representatives at the conference seemed to eat more and drink more while they were relaxing than the Russians, the MPs said. The Russians seemed to be very inconspicuous and didn't have much contact with the Germans, according to the 20lst men.

It was probably only rumor, one of those things that come up at a time like that. But all the GIs had heard that the Soviet delegation had issued only one directive for dealing with von Friedeburg and Jodl. The directive, according to rumor, was "Make those Nazis sweat."

President Truman's Proclamation of Victory in Europe

THE Allied Armies, through sacrifice and devotion, and with God's help have won from Germany final and unconditional surrender. The Western World has been freed of evil forces which for five years and longer have imprisoned the bodies and broken the lives of millions of freeborn men. They have violated their churches, destroyed their homes, corrupted their children and murdered their loved ones. Our armies of liberation have restored freedom to these suffering peoples whose spirit and will the oppressors could never enslave.

Much remains to be done. The victory won in the West must now be won in the East. The whole world must be cleansed of the evil from which half the world has been freed. United peace-loving nations demonstrated in the West that their arms are stronger by far than the might of dictators or the tyranny of military cliques that once called us soft and weak. The power of our peoples to defend themselves against all enemies will be proved in the Pacific as it has been proved in Europe. For the triumph of spirit and of arms which we have won, and for its promise to peoples everywhere who join us in the love of freedom, it is fitting that we as a nation give thanks to Almighty God who has strengthened us and given us victory.

Now, therefore, I, Harry S. Truman, President of the United States of America, do hereby appoint Sunday, May 14th, 1945, to be a day of prayer. I call upon the people of the United States, whatever their faith, to be unified in offering joyful thanks to God for the victory we have won and to pray that he will support us to the end of our present struggle, and to guide us into the way of peace. I also call upon my countrymen to dedicate this day of prayer to the memory of those who have given their lives to make possible our victory.

In witness whereof I have hereunto set my hand and caused the seal of the United States of America to be affixed. Done at the city of Washington this 8th day of May, in the year of our Lord 1945 and of the independence of the United States of America the 169th.

And the Russians, the GIs said, had an excellent one-word description for Nazis.

While the surrender talks were going on, three Wacs, T-3 Angela Gerato, T-5 Agnes Pernazzo and T-5 Christine Shenk, were occasionally called on to serve tea and coffee to the negotiators. Christine frequently made a few speeches about her job.

AGNES, who is from Tarentum, Pa., and who has a husband in a Third Army combat engineer unit, said, "I felt terribly uneasy serving them coffee. It was an awful feeling, and I can't get over it. And then some officer made a wisecrack about my serving coffee to Germans while my husband was still shooting them. He thought that was funny. I didn't. And that Gen. Jodl. I'd like to have spilled hot coffee down his neck."

Angela, a blonde from Kansas City, simply said, "It's hard to keep remembering they are your enemies when they're sitting in a place like that all dressed up and acting like gentlemen. But I've only been over here six weeks."

On Saturday, the day before the Germans signed away the Third Reich, the MPs watched Gen. Jodl and Adm. von Friedeburg walk in a tiny garden beside their billet.

Friedeburg seemed to have relaxed a little, but even there Jodl was as stiff-necked as ever.

Later, when the conference was all over except for the long-delayed announcement, the MPs went back to their own barracks and had a bull session about the war, Germans and "Ike."

Actually, they talked most about "Ike." The Germans didn't really interest them much, they said. A tall Jewish sergeant from New Jersey whose cyclist boots shone like those of the storm troopers in their heyday recalled the time that the general had given him Gen. Montgomery's cookies. "It was D-Day," said the sergeant, "and I'd missed my chow and old Ike knew it. So he turns around and gives me the cookies Monty has given him."

Somebody else remembered the time they had been Gen. Eisenhower's guard at a meeting filled with dignitaries. They all laughed about that one, and someone said, "Remember how Ike comes over and talks to us while some of those big shots' eyes bug out. And with his hands in his pockets. That's because guys got nervous and put their hands in their pockets Ike does it too, just to make everybody comfortable."

And that's the way the war ended for the 20lst MPs. Sgt. Henry Wheeler of Youngstown, N.Y., said the windup was pretty much as they had expected.

"Ike didn't have anything to do with those phonies until they were ready to quit," he said. "Then he went in and told them to sign up. And what does he do as soon as he comes out of the meeting? He shakes hands with the first GI he comes to."

In the days and weeks before the formal capitulation of the German Army, thousands of Krauts did their own private capitulating. These PWs were taken in the Ruhr pocket.

"The war was over, and I was still alive. And I thought of all the boys in the 28th Division band who were with me in the Ardennes who are dead now."

The War Was Over

By Sgt. RALPH G. MARTIN
YANK Staff Correspondent

PARIS—It started out phoney. It started when a photographer staged a shot with some French babes kissing some slightly over-happy soldiers in front of the Rainbow Corner. Watching the whole thing curiously, quietly, were several dozen soldiers sitting at the tables outside the Red Cross Club, sipping cokes.

That was Monday, the afternoon of the unofficial announcement.

"I keep telling everybody that the war is really over," said the MP at the door who was no longer checking passes, "but nobody believes me. I told one guy and he just said 'What . . . again?'"

That was only part of the mood that afternoon. There was something else. There was this:

Two paratroopers were just standing in front of the club when an excitable Frenchman ran up to them, waving a French newspaper, yelling "*La guerre est finie. . . . La guerre est finie.*" After he raced by, spreading the news, one of the paratroopers simply said, "For him, not for us."

Then there was another soldier who listened to somebody tell him that the war was over and then said bitterly, "Which war, the war they're fighting in Paris?"

That was Monday afternoon and then the mood changed.

It changed slowly. You could feel it change: you could hear it. First the singing by small crowds, loud singing by people who had drunk lots of cognac and were walking down the Champs Elysees arm in arm until they had a small parade. Then the parades getting longer and the crowds getting bigger and the planes swooping down low, dropping flares and dozens of people piling onto any jeep that slowed down.

The Champs Elysees was the center of it and every soldier had a girl or two girls or a dozen girls. And everybody was singing and everybody was everybody's buddy.

"Hiya, Army . . . Hiya, Navy . . .
Hello, Beautiful . . ."
"Goddammit, don't call me sir. . . .
Today I'm a civilian."
"Hiya civilian. . . ."

It spread fast. Some of it was forced. Some guys were getting drunk not because they really wanted to but just because they felt they had to. But most of the soldiers on the Champs were just letting themselves go, catching the spirit of it.

"Show me the way to go home. . . ."
"Roll out the barrel, we'll have
a barrel of fun. . . ."

"We're forgetting about the CBI tonight," said Pfc. Nat Mangano of Company H of the Second Battalion of the 301st Infantry of the 94th Division. "We're forgetting about every goddam thing. We're just gonna have a helluva time, that's all. Why not?"

There were very few lonely people.

"I can't find anybody to celebrate with. I don't know anybody here. I'm just on a three-day pass. Everytime I find me a girl she disappears. And I can't get a drink. All the bars are closed. But don't worry, bud, I'll make contact before the night's over. I've gotta make contact; I'm going back tomorrow."

It looked like that about midnight at the Arc de Triomphe. It looked like it was going to last all night long and not stop for days and days.

At one of the big cafes at the Rond Point, Pvt. Robert Sullivan of the Ninth Division put his arm around the lieutenant colonel. Both of them had all kinds of ribbons and all kinds of clusters. Both of them were smiling and looking at the empty champagne bottles.

When they drained their glasses, Sullivan pointed to the lieutenant colonel and beamed. "This wonderful sonofabitch," he said. "If he wanted my right arm, I'd cut off my right arm right now and give it to him." The lieutenant colonel kept beaming and refilled the glasses.

"He was a second lieutenant and I was a private in his squad and be was the best goddam second lieutenant in the business and now he's a lieutenant colonel and I'm still a private and if he wants my right arm, I'll cut it off right now and give it to him. Honest to God." They were both still beaming when they finished off another glass of champagne.

In another cafe, some Wacs were singing, "Mister Monsoor from Armentieres, parley vous. . . ."

On the rue de Berri, in front of the WAC hotel, a soldier and a Wac were in a clinch and the soldier said something and the Wac's voice came out of the darkness, "Nope, not even on V-E Day. . ."

* * *

IN the dayroom of the 108th General Hospital, a few boys were playing checkers, not listening to the radio. The radio was announcing the official end of the war.

There were two soldiers sitting right next to the radio, listening very intently, as if they wanted to make sure they got every word.

After Churchill had finished speaking, I asked one of the soldiers how he felt about it. He turned around to stare with wide-open eyes and then his words came out so slowly as if it was painful for him to talk, as if he had to drag every word out separately. He said:

"I have no feeling at all."

Then he pointed to his head. "I got hit on the head with a dud," he said. "I don't remember too much. I was with the First Division. I don't even remember what battalion. I don't even remember what my rank is. I think I'm a T-5 but I'm not sure. Isn't that funny?"

The other soldier was Pvt. Ernest Kuhn of Chicago. He had just been liberated after five months in a Nazi PW camp. He still had some shrapnel in his throat.

"I listened to Churchill talk and I kept saying to myself that I was still alive. The war was over and I was still alive. And I thought of all the boys in the 28th Division band who were with me in the Ardennes who are dead now. We used to be a pretty good band."

The nurse told how all the patients crowded to the balconies the night before to watch the planes drop the flares and how some of the planes spotted the hospital red cross and all the crowded balconies and how they came back and buzzed the hospital again and again, wiggling their wings, dropping so many flares that it looked like daylight. Then somebody started singing "God Bless America," and everybody joined in and some of the soldiers looked like they were crying.

In one of the wards, Pvt. Junior H. Powell of the 78th Division told how he felt:

"It's a great thing all right," he said, "but I kinda wish it'd all happened a month ago."

Then he pointed to his missing leg.

In the Place de l'Opera Parisians and Allied GIs await Gen. De Gaulle's broadcast.

Ticker tape and telephone books drop into Paris streets near the Opera after 3 P.M.

It Was Sunny In PARIS

It wasn't as exciting as Liberation Day, but all over the city people sang, kissed each other and paraded through the streets.

By Sgt. ALLAN B. ECKER
and
Cpl. HOWARD KATZANDER
YANK Staff Correspondents

PARIS—On the Champs Elysees they were singing "It's a Long Way to Tipperary," and it was a long way even the few blocks from Fouquet's restaurant to the Arc de Triomphe if you tried to walk up the Champs on V-E Day in Paris. From one side of the broad and beautiful avenue to the other, all the way from the Obelisk in the Place de la Concorde to the Arc de Triomphe in the Place de l'Etoile, there was hardly any place to breathe and no place at all to move. That was the way it was in the Place de l'Opera and the Place de la Republique and all the other famous spots and in a lot of obscure little side streets that nobody but Parisians know.

Paris and her people, like the GIs of every nationality who helped flood the streets, were out to celebrate. It was a fine sunny day, a trifle too warm for comfort even if there had not been such crowds, but no one who remembered the cold winter in Paris or the cold winter in the fox holes minded that much.

The French Government had announced that the afternoon of May 8 and all of May 9 would be national holidays, but long before noon on the Eighth, most of the people had stopped work and taken to the streets or were perched in balconies and windows to watch the crowds below. At the Hotel Claridge, the door of the barbershop was open but inside you couldn't get anybody to wait on you; the barbers were all busy waxing their own mustaches and preparing for a big time.

"C'est aujourd'hui la victoire," they said, spreading their hands as if that were more than explanation enough for anyone. Practically the only people who were doing business were the proprietors of sidewalk cafes, the hawkers of flags and souvenirs and the newspaper vendors who sold out 20 different newspapers in no time at all and were busy all day handling the fresh extras that kept rolling off the presses in French and English. Here were some of the headlines: *"L'Allemagne Vaincue"* (Germany Vanquished); *"Ils Ont Capitule"* (They Have Capitulated); *"Le Jour de Gloire. . ."* (The Day of Glory . . .) and just plain *"C'est Fini!"*

At 1500 hours, when Gen. de Gaulle went on the radio to make an official announcement of the victory, the crowds were two layers deep in the Place de l'Opera, where pretty girls and children in their Sunday best perched on the shoulders of French soldiers and civilians to listen for the words they had been waiting so long to hear. Great blue loudspeakers on the balconies of the Opera and in every important *place* throughout the city, carried the general's message to the people and recordings repeated it at regular intervals the remainder of the day.

Down on the banks of the Seine, just opposite the *Ile de St. Louis*, an old French 75, which was used in the first World War, boomed out a salute all day and night. The weapon was captured by the Germans in the collapse of the French forces in 1940 and retaken by French troops in 1944. Crowds lined the river walls on both banks to watch the ceremony, the children and women plugging their ears with their finger tips to deaden the concussion from the gun.

Air raid sirens, so long a symbol of terror to the French and to all the war-torn world, this time sounded a message of freedom. And the people of Paris responded with a full-throated yell and the bedlam of every auto horn in the city.

All day long, teen-age boys and girls paraded down the great broad avenues and through the squares in their traditional *"monome"* formations, 10 and 15 abreast, arm in arm, waving the flags of all the Allied nations. At Marbeuf on the Champs Elysees, a huge throng of students formed a circle on the lawn and sang the stirring French songs, the *Marseillaise*, the *Internationale*, the *Madelon* and the great marching songs of many wars. Their leader conducted the singing perched on the shoulders of two schoolmates, using a pencil as a baton.

Many of the students wore paper hats made half of American and half of French flag designs, as they marched along the street, singing their favorite songs. In between they chanted *"Avec nous," "Avec nous"* over and over again, inviting crowds along the street to join them.

At the head of the columns of students, for whom it was a great day, were youths and girls on bicycles, riding as many as a dozen abreast, left hand on steering wheel, right hand on neighbor's shoulder. Behind the columns came jeeps and trucks, sedans and Jerry vehicles of every size and description, loaded to the axles with other happy and noisy French students.

Somewhere, three French girls had gotten hold of an American jeep. There were no GIs in the vehicle. The girls were civilians, in gay summer dresses. The one who drove waved gaily with one hand at the throttle. Everybody laughed. The MPs were too startled to even question the girls.

Another column was led by a GI driving a horse and buggy. He had lost the driver some place. He had also lost the reins. But he was undaunted. He held on to the horse's tail with both hands, using it as a whip and a rein, while the axles of the buggy groaned and the crowd at his back cheered him on in chariot-race fashion.

Halfway up the Champs Elysees a half-dozen French police tried to turn vehicles off the broad avenue into the side streets. They tried also to clear the people from the streets back to the sidewalks. It was like trying to stem a flood.

"The president of the Republique cannot pass," one policeman shouted.

"Vive le President. Vive la Republique. Vive la France," the crowd replied.

At the Arc de Triomphe the banners of the Allies flew from special rigging above the tomb of the Unknown Soldier. From the famous Carrousel, the small arc before the Palace of the Tuileries, you could look up the Champs Elysees past the Obelisk in the Place de la Concorde, centered perfectly in the arch, and to the banners of the Allies flying in the great Arc at the Etoile.

THERE in the Etoile the crowds sobered for a moment and sang a less boisterous *Marseillaise*, a credible "God Save the King" and a feeble "Star Spangled Banner."

It wasn't, as the French girls hastened to assure their American friends, that they felt cold toward the U.S.A.; any Yanks who felt the warmth of French kisses on this day knew this was far from the case. "It's simply that the tune is impossible and no one knows the words," one pretty 18-year-old said with an accusing pout.

For thousands of French men and women who had lost fathers, sons, husbands or brothers in the war, the Arc de Triomphe—with its tomb of an unknown French soldier who died in the last war—was a token of their bereavement in this one. All the great avenues leading to the Arc de Triomphe like the spokes of a great

THIS PAGE IS DECLASSIFIED IAW EO 13526

A Fortress buzzes the Arc as crowds gather to pay respects to Unknown Soldier.

One of hundreds of student parades that jammed the Champs Elysees all V-E Day.

wheel were jammed as the throng made its slow way to this symbol of France as a great nation. There was a formal changing of the guard as specially chosen squads of 33 French sailors, soldiers and air force cadets shared a day-long vigil of honor by the tomb, which was covered with fresh flowers.

All day long the aircraft of all the Allies buzzed the Champs Elysees, swooping down to treetop level, then zooming up to clear the Arc de Triomphe. There were little Cubs and P-47s and C-47s, B-17s, B-25s and even a great British Lancaster. Down at the Eiffel Tower it was open season again for pilots who wished to tackle the comparatively small opening under the great network of steel.

"We've waited for this for a long time," said the *agent de police* (or what everybody except the French people call a *gendarme*) who had given up trying to untangle traffic at one busy intersection and was surveying the resulting confusion with calm satisfaction. "My brother-in-law is still a prisoner of the Germans at Vienna, or was when we last had news of him. Only that makes this day incomplete."

On the Champs Elysees we met a French woman, native of Algiers, who had last ridden with us during the hectic day of the liberation of Paris last Aug. 25. She greeted us warmly. "We meet only on the days of great glory," she said. Her companion was a French civilian employee of OSS who had worked for the U.S. in North Africa for a year before the invasion there. "This is a great personal triumph for me," he said. "I have worked hard for this day."

To a bank teller at the Credit Foncier, who had been in Paris for the Armistice in 1918, this celebration seemed more subdued than the last. "We've been waiting from minute to minute for 10 days now, expecting to hear the announcement of victory. The Germans have announced it, the radio has announced it, everybody has announced it, and only now has it become official. But we have been spreading our celebration over several days. For that reason it may lack some of the spontaneity of the last time."

A French woman put it differently. "For Paris," she said, "our great day was the day of our liberation. We can never hope to reach such heights again."

In the Metro at the Concorde, a three-year-old girl in a peach silk dress jumped up and down for joy. She didn't know that it was V-E Day but she did know it was some kind of a holiday because her mother had said the could wear her new dress. She was throwing kisses to everybody in the subway. Her father, a wine merchant, was equally happy. His brother, for five years a prisoner of war, had just been liberated by the Seventh Army and was now back home, one of 8,000 Frenchmen being repatriated daily. He looked thin but said he was rapidly gaining weight.

The Metro itself was so crowded that once in, it was impossible to move to get out, and it took as much as an hour to reach the train platforms.

Outside on the streets, big truckloads of other newly liberated French prisoners were weaving their way through the crowds who cheered and sang and jumped on the trucks. Once there was an excited shriek as an old woman thought she recognized her grandson on the back of a truck. At the Gaumont Palace Theater in Montmartre, which is one of the centers to which repatriated prisoners are brought, the daily crowd whose loved ones had not yet come home still waited, scanning each truckload eagerly.

At the AEF Club in the Grand Hotel near the Opera, where except for a run on the ice cream bar things were pretty quiet, an appealingly plump French Wac gave us the most direct (and easily the most pleasant) answer we'd had all day when we asked her how she felt about the end of the war. "I weel show you," she said, kissing us eagerly. Half a dozen other soldiers promptly asked her how she felt about the end of the war.

One of them, a French member of a British paratroop unit who had made nine combat jumps in France and Holland, twisted his maroon beret and said he was glad it was over. Then he announced his intention of volunteering for a unit that may see action in Indo-China soon. "We've got a war in the Pacific to fight, the same as you," he said. "But anyway, it's half over. The other half cannot take much longer."

With nightfall the City of Light came into its own again. Street lights were turned on and floodlights illuminated the beautiful Parisian monuments and structures. The Arc de Triomphe, Notre Dame, the facade of the Opera, Sacre Cœur which sits on top of the Montmartre, were lighted for the first time in six years.

A GI on the Champs Elysees stopped his jeep to let a beautiful blonde climb on board. She was followed by a dozen or more younger citizens. He asked the blonde: "Are these friends of yours?" One of the newcomers, a boy about nine, piped up: "On this day, M'sieur, all the world are friends of all the world."

In LONDON

LONDON—London, with the help of thousands of U.S. and Allied servicemen, blew its collective top when it heard about the German surrender.

The signal for the rejoicing was the BBC flash which interrupted a home-service radio program at 7:40 Monday to announce that Tuesday would be "Victory in Europe Day."

Hundreds of GIs were gathered at the Rainbow Corner Red Cross Club in Piccadilly when bundles of *Stars and Stripes* extras were tossed out free. The paper bore a huge banner headline "Germany Quits," and contained the official Ministry of Information announcement which all England had just heard on the air.

News of the Reich's final and complete surrender found Piccadilly, Marble Arch and other popular intersections jammed with people. At first incredulous, the cautious British worked up to a pitch of demonstrative joy that amazed the most ETO-wise GIs.

Rainbow Corner quickly became the focal point of excitement. A GI band which had been playing for a dance at the club moved out on the balcony and serenaded a mixed Allied crowd milling around Shaftsbury Avenue. Although it was practically impossible to move in any direction, jitterbugs and oldsters took the cue and danced as long as there was music. Hawkers who had miraculously obtained stocks of American, British and Russian flags made of war-scarce material did a terrific business as the price of the flags shot up from one dollar 50 cents to four dollars in an hour. Busses were stalled in the middle of Piccadilly and pubs hastily put up standing-room-only signs to ward off the deluge of celebrators.

Some of the soldiers displayed the greatest enthusiasm of the evening when a sign was hoisted in the club reading: "Upon official notice of V-E Day all Army passes or furloughs are to be extended 48 hours, irrespective of the expiration date." They were also happy to learn that food and drinks would be on the house at the club on V-E Day. Some were so happy, for one reason or another, that they insisted on shaking hands with white-helmeted MPs.

There was a serious note underlying all the merrymaking, though, as far as GIs were concerned, and that was the war with Japan.

Anglo-American relations, which hit a new high with the mutual sorrow on the death of President Roosevelt, soared even higher when news of Germany's surrender became official. That feeling was perhaps epitomized by a middle-aged British civilian who stood watching the fireworks—literal as well as figurative—on Piccadilly Circus.

"Well, it's all over as far as bombing and rockets and men dying on the Continent are concerned and it's halfway over as far as Japan is concerned," he said. "And we couldn't have done it without you Yanks. We were down, you know, when you people came through with lend-lease and then sent troops over. We English will never forget it and we won't let you down in the Far East." That sentiment seemed to be echoed thoughout London.

What Happened Back Home

Some people just went crazy when they heard the good news but there were a lot who simply stayed on the job and worked.

Victory Celebrations

THE cafes and the bars and the night clubs were filled and the churches were filled because people all over America had a new hope that the final end of the whole war was coming soon now.

Despite the fact that the sharp edge of surprise had been blunted by the premature surrender news and the constant, dragging expectancy of the actual surrender—despite that, the big and little cities of America still went full speed ahead with their Victory parties.

Broadway went crazy, as everybody had expected. For seven hours, New Yorkers said hello to anybody who had a friendly face. On Fifth Avenue, somebody started an impromptu Conga line which snaked and bumped its way, while the people cheered, sang, kissed and cried. From windows all over Manhattan came miles and miles of ticker tape and torn telephone books and in the garment center people threw out yard after yard of cloth until the streets were eight to 10 inches deep in it. In Times Square, the cops roped off the street and the shopkeepers put up barricades around their plate-glass windows. All along the river, every boat blew its whistle.

One of the many wild rumors floating around town was that a sub had surfaced in New York Harbor and was flying a white flag. But the "sub" turned out to be a naval vessel with a sailor's laundry hanging out to dry.

Then right in the middle of the wild celebrating came the broadcast by Mayor LaGuardia to the people of the city. Carried by loudspeaker to crowds everywhere, his message said: "I want all the people of New York who have thoughtlessly left their jobs to return and I want to beg of them not to do it again. Just remain on your jobs as a tribute to the men who have won the war in Europe, and a token to the men fighting at this moment and dying in the Pacific."

Crowds immediately broke up and many people went home.

In Detroit, a hundred war workers left the Ford River Rouge plant to celebrate and Chrysler estimated that about 2,000 employees took the day off at the Dodge Truck plant. But in most plants all over the country, the overwhelming percentage of war workers stayed at their jobs, continuing their work without interruption, even though many plants had announced the news over the loudspeakers.

Of all the country's big cities, Washington, D.C., took it most calmly. Newspapers, though, brought out their biggest, blackest type for a series of extras, and radio stations threw away their regular schedules and devoted all available time to a detailed account of the peace news.

Most people back home were finding it tough to keep remembering President Truman's recent caution that the news of the surrender in Europe should be an occasion for the rededication of American efforts to the struggle in the Pacific.

President Truman said what just about everybody in the country was thinking in his V-E broadcast which made the surrender official.

"This is a solemn and glorious hour," he began. "I only wish Franklin D. Roosevelt had lived to see this day."

But most of what the President said dealt with the fact the war wasn't really over for the U.S. and that people back home have a job on their hands, to complete the defeat of the Japs.

"We must work to finish the war," he said. "Our victory is but half done. The West is free but the East is still in bondage to the treacherous tyranny of the Japanese."

What's more, the President continued, people back home must labor to prevent another war. The best way to do that, he said, is for the U.S. to "work to bind up the wounds of a suffering world, and to build an abiding peace—a peace rooted in justice and in law. We can build such a peace only by hard toil, some painstaking work, by understanding and working with our Allies in peace as we have in war."

At his press conference on V-E Day the President mentioned that it was a particularly happy occasion for him because it happened to come on his 61st birthday.

With the end of the war in Europe, a good many newspapers began predicting that there would soon be a meeting, the first since President Roosevelt's death, of the Big Three. The guesses as to where the meeting would take place ranged all the way from Moscow to London to Washington, but most editorial writers seemed to feel it would be the U.S. capital.

There are a good many problems to be discussed, including the exact details of what will be done with Germany, a good many boundary disputes and the probem of food in Europe, which will probably be hungrier this summer than at any time since 1939. It was generally agreed that the U.S. will send more and more food to Europe during the coming year.

War Mobilizer Fred Vinson emphasized the plea of other Federal authorities that war production continue uninterrupted and that there be no greater interference with normal activity than the people's sense of sober rejoicing demanded. Vinson left the whole matter up to the people's own "common sense."

For Americans who had loved ones in Europe, V-E Day called for some kind of celebrating despite thoughts that they might soon be shipped to the Pacific. Because, even if that were so, they still hoped hard for that furlough in the States first, a chance at least to see their sons, husbands, fathers, brothers.

But for relatives of soldiers now fighting in the Pacific, V-E Day meant much less. And for the people with gold stars in their windows, the day was just another day of hurting memory.

Scarcities Still

AMERICANS were told by Federal agencies that they shouldn't expect life on the homefront to be cozier after victory than before. Sugar, for one thing, was actually scarcer this year than last, and Judge Samuel I. Rosenman, one of President Roosevelt's closest advisers, returned from Europe to tell President Truman and the country as a whole that the "allocation of civilian supplies to liberated countries will cut into the ration of the American consumer." He urged a campaign to acquaint Americans with just how desperate the food situation in Europe really is.

President Truman cheered taxpayers by proposing cuts in war agency expenditures following victory in Europe and put Secretary of Commerce Henry A. Wallace in over-all charge of the Office of Surplus Property which must dispose of certain war materials as they become excess baggage. But by and large the White House, like the nation as a whole, wasn't doing an awful lot of talking about the postwar world. For the U.S. there wouldn't be any postwar world until Japan was laid out alongside Germany. In unofficial stories from Washington the press was again reminding relatives and friends of men in service that many troops in Europe now wouldn't come home permanently until Japan's defeat and that some would go to the Pacific straight from Europe.

Death of Dictators

THE death of Germany's fuehrer made less of an impression on the U.S. than might have been expected. The way in which Adolf Hitler's death was announced was probably the reason for the comparative lack of emotion. The announcement came from the German radio, a source which Americans long ago learned to distrust. At first many homefronters flatly said they didn't believe the report; they said the Nazis must still be trying to build up the Hitler legend and that he was probably alive somewhere chewing carpets. When the White House, Moscow and Gen. Eisenhower all said there was every reason to suppose that Hitler was dead, the homefront dropped its skeptical attitude but by then the edge had been taken off the news. And there was still the fact that no two authorities agreed on how Hitler had met his end. But no Allied source thought he had died fighting.

After being flooded with photographs, pretty ghastly photographs, of the dead Mussolini, the homefront would have been more satisfied if the death of Adolf Hitler had been a little less mysterious. As the *New York Herald Tribune* put it, "the man who once said that any lie would work if it was big enough has been deprived by the enormity of his own lying of even the dignity of death. This man, whose evil shadow darkened the earth at the end, is nothing; there is no grandiose final act; there is simply a rat hole and a name and nothing more. He merely dissolves into the tissue of his own lies. He began in nothing and he ends in it."

The end of Mussolini apparently struck the homefront as melodrama on a grand scale. Some voices were raised to say that the performance of the Milan mob was pretty brutal but newspapers apparently felt that the American public could stomach numerous photographs of the dead Duce lying in the dust and filth of a Milan square, his ponderous jaw propped up by a rifle butt. A photograph of Mussolini and his late mistress hanging side by side by their heels probably was the most widely published picture of an extraordinary week. The campaign in Italy from the bitter start to the astonishing finish had never lacked color.

As for Germany, the *New York Times* pointed out that "Never again will it be possible for

On V-E Day people gathered around newsstands, buying each historic extra as it rolled off the presses.

some new Hitler to rise up and persuade the Germans that their army has never been beaten and that only treachery on the homefront lost them the war. . . . Never again will the Germans be able to calculate inflicting the destruction of war on other lands while their own homeland stands uninvaded and secure. At great cost but with great emphasis the German people have been taught the lesson that no nation is big enough or strong enough to dominate the world."

Japan's Lesson

THE German surrender found the Japanese government all set with a formal statement. An editorial in a Tokyo newspaper which said "The situation in Europe has followed its course with mathematical clarity" was widely reprinted in the States. So was another Tokyo editorial which said, "We've carried on an independent war. It therefore is needless to repeat that we shouldn't be affected in the least in our war aims or in strategy by any change in the European situation."

Americans took such remarks from Tokyo as an indication that Japan, like Germany and Italy, would have to be taught its lesson the hard way.

Emily Post would have frowned, but on subways people read victory news over each other's shoulders.

Down to Business

THE San Francisco United Nations Conference For International Organization—the UNCIO to people who like initials—began to settle down to the job it was called to do. That job was to write a charter for a Postwar Security League to keep peace. In the opening days of the conference the main job had been little discussed. There had been preliminary work to do.

Much of the preliminary work had been simply speech-making, which diplomats traditionally enjoy. Chairmen of all the 46 delegations wanted it put on the record that their nations favored lasting peace and that they are willing to cooperate to get it. Preliminary matters were thorny and made for arguments.

There was the matter of the permanent chairmanship. The Russians proposed that the four sponsoring nations—Russia, China, the United States and Britain—should share the presidency of the conference with equal powers. The other three powers did not see it that way, pointing out that ordinarily the chief representative of the country in which an international meeting is held gets the presidency. A compromise was reached under which China, Russia, and Britain held equal status with the U.S. in the presidency but Secretary of State Edward Stettinius was given chairmanship of the powerful steering and executive committees.

There was also the matter of Poland. The Russians, led by Foreign Commissar V. M. Molotov, held that the Soviet-sponsored government in Lublin should be invited to the conference. British and American leaders held that Lublin shouldn't be invited because it was not fully "representative" of the Polish people. British, American and Soviet leaders undertook to settle this issue among themselves but disagreement slowed the Conference.

Disagreement over the status of another nation, Argentina, also held up progress. The Russians took the view that Argentina was a "fascist" nation and could not be classed among the United Nations. To back up his argument, Molotov quoted critical remarks about Argentina made by former Secretary of State Cordell Hull and the late President Roosevelt. But the conference did not side with the Russians. Thirty-one nations, an overwhelming majority, held that since Argentina had recently declared war on the Axis it was entitled to an invitation to San Francisco. Molotov declared he could not understand why Argentina deserved an invitation any more than Poland but bowed to the conference decision. That decision received a mixed reception in the U.S. press. Some papers agreed with Molotov that the invitation to Argentina might well have been postponed.

Some of the American press was inclined to write about the San Francisco controversies as if the meeting was a football game or a prize fight instead of a solemn gathering to write an international charter. Some papers said Molotov won a "victory" when the conference voted to offer seats to White Russia and the Ukraine—giving the Soviet Union three votes in all. They said he had lost a "round" when the conference let in Argentina but not Poland. But conference leaders, including Molotov, stressed that while disagreements of many kinds were bound to rise, the delegates were united in their wish to set up a postwar organization to prevent aggression and to stabilize international relations.

Nearly all of the serious-minded commentators agreed that while the Argentine-Polish issues have set off a certain amount of fireworks the conference has at no time been threatened with failure. As compared with certain sessions of the old League of Nations it was held that proceedings at San Francisco have been very harmonious indeed.

As the conference settled down to its main job, San Francisco got used to its role of host to the Allied world. The public still got a kick out of the flowing headdresses of the delegates from Saudi-Arabia and it strained for glimpses of smiling, fast-walking Vyacheslav Molotov, who undoubtedly figured in more news than any other delegate.

Now that all of the preliminary oratory is over, some commentators said they thought that Foreign Secretary Anthony Eden had made the most moving speech of all delegation chairmen. Passages in Eden's speech were widely quoted: "In the last six terrible years unnumbered men have died to give humanity another chance. We, too, have a job and work to do if we are not to fail these men. Let us do it with courage, modesty and dispatch. Let us do it now."

One of the best reasons for "doing it now" was that the war in Europe had ended faster than the conference could build a peace organization. Molotov announced that the collapse of Germany made it impossible for him to stay in San Francisco for the finish of the conference. Anthony Eden said he, too, would have to go.

But the work of the conference would have to go on in the absence of those top leaders. In a large measure the conference involves legal and technical rather than political decisions. Its primary job is not to make a diplomatic policy but to frame a world constitution. The basis of the constitution was set at Dumbarton Oaks last fall. At San Francisco the constitution must be filled out and made ready for submission to the Allied governments—to the Senate in the case of the United States.

The delegates had quite a job on their hands, but they seemed to be doing it—and well.

Atrocity Pictures

THROUGHOUT the country first-run movie houses showed films of a kind seldom if ever seen by American audiences. The films, made for the most part by the U.S. Army Signal Corps, showed piles of human bones, mass graves and beaten, starving men who looked more like corpses than human beings. The scenes were German prison camps—Buchenwald, Hadamar, Ohrdruf and Nordhausen.

In all the cities the reaction of movie-goers was apparently the same. Homefronters sat in shocked silence, broken now and then by low gasps. In a few theaters some women walked out before the prison scenes were finished, evidently unable to take them. But most managers reported that film-goers felt it their duty not to flinch or turn away from the evidence of Nazi mass tortures. Only one theater, so far as is known, has refused to show the Army films, Radio City Music Hall in Rockefeller Center, New York.

Since 1933 when Hitler first came into power serious writers had been telling the American public about Nazi brutalities. For some reason these writers had failed to capture the imagination of all the Americans.

This time German methods had horrified Americans not at the beginning of the war but at the end.

This fact will probably make a difference in the nation's post-war attitude toward Germany and the Germans.

Thousands of Americans greeted the victory announcement quietly and prayerfully, in the churches.

THIS PAGE IS DECLASSIFIED IAW EO 13526

VICTORY ORDER OF THE DAY

MEN and women of the Allied Expeditionary Force:

The crusade on which we embarked in the early summer of 1944 has reached its glorious conclusion. It is my especial privilege, in the name of all Nations represented in this Theatre of War, to commend each of you for valiant performance of duty. Though these words are feeble they come from the bottom of a heart overflowing with pride in your loyal service and admiration for you as warriors. Your accomplishments at sea, in the air, on the ground and in the field of supply, have astonished the world. Even before the final week of the conflict, you had put 5,000,000 of the enemy permanently out of the war. You have taken in stride military tasks so difficult as to be classed by many doubters as impossible. You have confused, defeated and destroyed your savagely fighting foe. On the road to victory you have endured every discomfort and privation and have surmounted every obstacle ingenuity and desperation could throw in your path. You did not pause until our front was firmly joined up with the great Red Army coming from the East, and other Allied forces, coming from the South. Full victory in Europe has been attained. Working and fighting together in a single and indestructible partnership you have achieved a perfection in unification of air, ground and naval power that will stand as a model in our time. The route you have travelled through hundreds of miles is marked by the graves of former comrades. From them have been exacted the ultimate sacrifice; blood of many nations—American, British, Canadian, French, Polish and others—has helped to gain the victory. Each of the fallen died as a member of the team to which you belong, bound together by a common love of liberty and a refusal to submit to enslavement. No monument of stone, no memorial of whatever magnitude could so well express our respect and veneration for their sacrifice as would perpetuation of the spirit of comradeship in which they died. As we celebrate Victory in Europe let us remind ourselves that our common problems of the immediate and distant future can be best solved in the same conceptions of co-operation and devotion to the cause of human freedom as have made this Expeditionary Force such a mighty engine of righteous destruction. Let us have no part in the profitless quarrels in which other men will inevitably engage as to what country, what service, won the European War. Every man, every woman, of every nation here represented, has served according to his or her ability, and the efforts of each have contributed to the outcome. This we shall remember—and in doing so we shall be revering each honored grave, and be sending comfort to the loved ones of comrades who could not live to see this day.

DWIGHT D. EISENHOWER

Gen. Dwight D. Eisenhower, who led the Allied Expeditionary Forces to Victory in Europe.

What The Infantry Said

WITH THE NINTH ARMY—The official announcement of the war's end came to Ninth Army doughs as a complete anticlimax, just as it did to Paris and the homefront.

To the infantrymen who had sweated out the discomfort and death of the front lines so long the real end of the war was the moment they and their outfits were relieved for the last time on the Western Front. Because that time came to the men of the Ninth Army days and in some cases more than a week ahead of the formal declaration, they couldn't—and didn't—get too hepped up about news of the surrender at Rheims.

Surrender of German troops in Holland, Denmark and northwestern Germany, ending hostilities on the U.S. Ninth and British Second Army fronts, preceded the total capitulation by three days.

But even before that time several of the veteran combat units had been off the line and pulling back into rest areas or temporary military occupation zones as far to the rear as Westphalia.

It was in the trucks and on the tanks and tank destroyers heading west that the doughs had their private celebrations of the end of their own personal war—or anyway the European half.

"Put it down that we were relieved by the Russians," said Sgt. William Nickell of Knox, Ind., squad leader in F Company of the 329th Regiment of the 83d Division. Nickell was riding west across the Elbe River in one of the last trucks to leave Zerbst, the deepest point of American penetration on the Ninth Army front, as our forces evacuated the Elbe bridgehead and Red Army occupation forces moved in.

Most of the talk on the truck, for the first hour or so in the drizzling early-morning rain, was about going home and maybe going to the Pacific. Everybody was in favor of going home.

Pfc. S. L. Gates, who has a brother in the Marines in the Pacific, figured he'd be heading there too before long.

"What do you think you are, a combat soldier?" asked Pfc. Bernard Levin of Cleveland, Ohio, pointing to the rifleman next to him.

"Hell, no," said Pfc. J. L. Renslow, "I'm a come-back soldier—I want to come back to Cleveland, too—Cleveland, *Tennessee*. That's the only zone of occupation I'm interested in."

Members of the I & R platoon of the 329th, like most front-line infantrymen, found it hard to get through their heads that their bullet-ducking days were over, at least for awhile.

"I've got to go out tomorrow just to see if they'll shoot at me," said Cpl. Lemuel H. Sistler of Batavia, Ill.

"We've been lucky," said Lt. Sam Magill of Ashtabula, Ohio, I & R platoon leader. "I half expect to hit a mine when we get near the Statue of Liberty or trip on a sock and break my neck when I'm climbing out of bed back home."

Pfc. Bob Houseknecht of Muncie Valley, Pa., who won a Silver Star for helping lead the first American patrol across the Rhine, simply wondered how soon he'd be seeing his wife and two children, one of them born after he shipped out.

Pfc. Stanley Pope of Caledonia, Minn., said, "Son of a bee. Give me another drink" when he heard the news. But Pfc. Bob Glasgow of Wheeling, West Va., had a different reaction.

"Now I'll never have to get drunk again," he said.

Some Merely Shrugged

GERMANY—Peace came to the weary infantry on the Elbe on a soft spring day, and the infantry nodded its head and went about its business.

There could be, of course, no sudden order to cease fire because firing for the Ninth Army ceased days ago; so the infantry heard Churchill and told each other, "It's over" with hardly more enthusiasm than they might have shown toward the news that chow's up.

For the infantry was preoccupied.

A lieutenant in charge of the PW enclosure was sweating with the food problem. "I go over to see about feeding 2,100 people and come back and find I've 10,000 more they just brought in."

The music that followed Churchill's announcement was still playing, but the lieutenant wasn't listening. He was staring gloomily at the huge mass of Germans. A Nazi kid with a placid face that had never known a razor approached the lieutenant and said in high school English, "I'm coming from Brooklyn. At which time do I eat?"

The lieutenant stared at the kid, almost said something and thought better of it. He walked off without a word. The stately music heralding the peace played on.

In Magdeburg, the infantry, already saddled with guard duty, met the peace with magnificent indifference. One dough, "a character" in his company, rushed out shouting, "Deutsches Kaput," but both his buddies and the Germans only regarded him as people do when they hear already-ancient news. For peace, real peace, was now nothing more to them than the blessed inaction which had been theirs for days.

A man with a bottle invited a friend to stop with him in a doorway. It's bad taste to drink in view of the beaten and bitter Germans and even worse taste to drink where an officer might see.

The invitation was followed by the explanation "It's V-E Day," but the bottle was there before Churchill spoke and if it hadn't been V-E Day the invitation would have been backed by some other excuse or no excuse at all.

The infantry talked with the age-old understanding of the infantry's lot: "Now what?" And in the manner of all infantrymen shrugged its shoulders.

The COVER

Painting by Sgt. DAVID LAX

And so it was Victory in Europe Day.

When the sirens sounded, they hurled ticker tape in New York and drank champagne in Paris and fired artillery salutes in Moscow and began a holiday in London.

And the people who write for the newspapers and speak on the radio mentioned "the victorious march across Africa, the triumphal battles of Sicily and Italy and the glorious drive across France and into the heart of a prostrate Germany."

And those were eloquent words. But the men who had fought the war—and won—said none of them. The men who had fought the war remembered—remembered Hill 609 in Tunisia, remembered Gafsa in Sicily, remembered Cassino in Italy, remembered Easy Red Beach in Normandy, remembered St. Lo and the Huertgen Forest and the Rhine and all the towns and forests and rivers before and after and remembered the Purple Hearts along the way and the neat white crosses. And knew that there had been no victorious marches, knew that there were no triumphal battles and no glorious drives.

They knew that there are no words to say what it had been and what it would still be in—say, Shanghai, say, Borneo, say, Tokyo, say, Manchuria. There was no ticker tape or champagne or artillery salutes or holidays in the Pacific.

And so it was Victory in Europe Day, but the men who had fought the war—and won—were not joyous. They were humble and silent, remembering.

The Nazi blitz by October, 1942, had enveloped Europe, overrun Western Russia and was sending spearheads from the Crimea and Egypt to seal off the Near East and the Mediterranean Sea.

The German Armies, stopped first in Russia and Africa, retreated from Italy and France and the final offensives of the Allies reduced the Nazi "new order" to a question mark on the map.

1 For most of us it began on October 29, 1940, when Secretary Stimson pulled out the first number.

2 We repeated the oath before the flag and wondered if we'd be "back in a year, little darling."

3 Trains pulled in at Southern camps, and we marched off lugging barracks bags and suitcases.

4 "All line,

The GI's War in Europe

A Picture Story of the American Soldier's Fight Against Germany and Italy from Induction to Victory.

7 And GIs were being sent to Iceland. Traveling on the North Atlantic was often plenty rough.

...amps, and we
...s and suitcases.

4 "All present and accounted for." We stood in line, drilled, made packs and stood in line.

5 We hurdled barriers in obstacle courses with those basin helmets sliding around on our heads.

6 Some left the States early. U. S. forces were sent to build bases in Greenland in April 1941.

...pe

...o Victory.

...and. Traveling
...plenty rough.

8 A GI main street in Iceland, lined with Nissen huts. It seemed pretty bleak and far from home.

9 We landed in Northern Ireland in January 1942. Yanks paraded in fresh blouses with gas masks.

10 We were starting to assemble men and supplies in Britain. GIs saw English pubs for the first time.

11 More and more American planes were flying from English fields as ground crews waved them off.

12 Eighth Air Force Forts first raided Europe in July 1942. These B-17s were bombing in France.

13 B-17 crews were tired after getting back but they usually had plenty of things to talk about.

14 Krauts were caught napping when the Eighth Air Force first bombed as far as East Prussia.

15 Rangers, back from the Dieppe raid, August 1, 1942, were first to fight German ground troops.

16 The ATC was using Ascension Island (halfway to Africa) as a base but kept it secret until 1943.

The GI's War in Europe

17 The war against fascism brought us to Egypt in 1942, where some of us did a little sightseeing.

18 And the war brought us to Iran, where we kept the lend-lease goods moving toward Russia.

19 On November 7, 1942, bad day for the Axis, we landed on beaches of French North Africa.

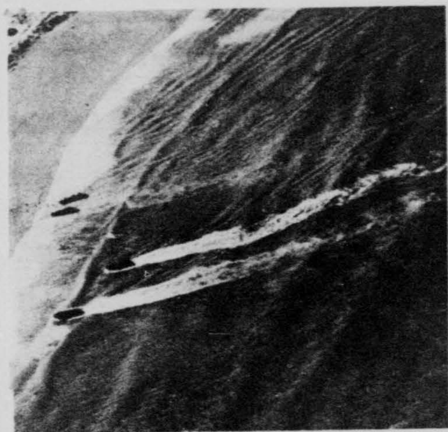
20 Most GIs who occupied Oran saw a liberated city for the first time and found they liked it

21 In Tunisia the Germans fought or tried, like this one, to get away. Either way they lost

22 We fought over the desert and dry hills and watched everything the enemy was doing.

25 When we entered Tunis it was a happy day for Frenchmen, British and Americans alike.

26 When the Tunisian campaign ended, in May 1942, the war was over for a lot of German and Italian prisoners. The Allies had captured 291,000 Axis soldiers, killed 30,000 and wounded 27,000.



28 MPs were about the only GIs who saw the famous Casbah in Algiers. It was out of bounds.

29 Next step was Sicily. In planes, or on landing boats, we wondered how tough it would be

30 We waded ashore on July 9, 1943, sloshing through the surf and cussing at the mules.

23 Infantry and armor took one Tunisian town after another as the Nazi armies retreated.

24 As always, digging a foxhole, like this one by the side of the road, was good insurance.

27 GIs of the Signal Corps worked overtime in North Africa setting up communications.

31 The kids in Sicily were almost as good at observation as we were, being curious—like kids.

32 We fought snipers in the Sicilian towns, with the sun shining through the smoke and dust.

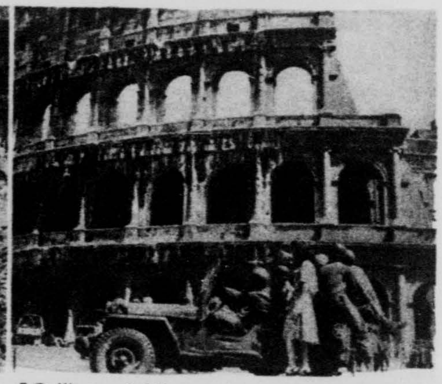
33 The medics did a job in Sicily, as they hav done in all other combat areas in this wa

CONTINUE

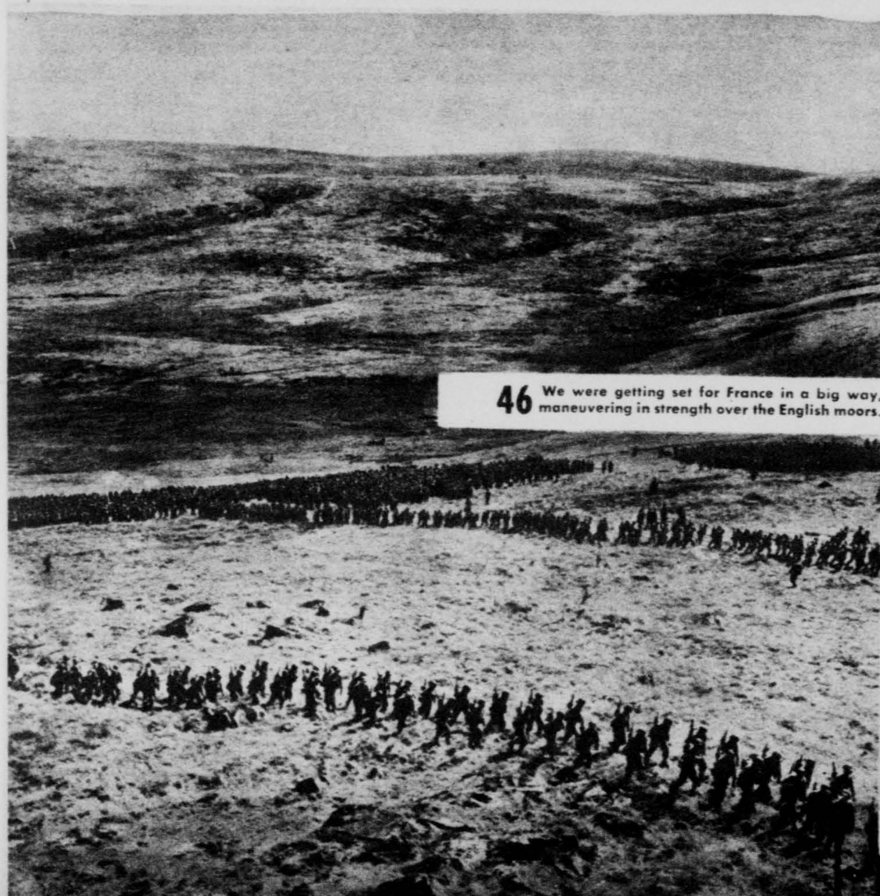
The GI's War in Europe

34 We invaded Italy in September 1943. The Italians quit, but Nazi bombers still unloaded on us.

35 When we got into Italy we had to cross over one long range of mountains after another.



36 And most GIs who took a hill went on to take the next one, but some of them didn't.



40 The Fifteenth Air Force was taking off from Italy. Some ground-crew GIs were fixing up quarters.

41 All Italy and all Allied soldiers who fought there remember Cassino on the road to Rome.

42 We occupied Rome on June 4, 1944. Some got a pretty guide to show them the Colosseum.

46 We were getting set for France in a big way, maneuvering in strength over the English moors.

47 And finally we were jammed up against the loading docks, ready for sailing orders.

50 They made it but had to take a breather and were in no mood to smile at the camera.

THIS PAGE IS DECLASSIFIED IAW EO 13526

37 The Army nurses were there when we made the Anzio-Nettuno beachhead. We needed them.

38 And we needed artillery. You're a bit more confident with a "Long Tom" backing you up.

39 Another part of war in Italy was the girls who came over to put on a show, rain or shine.

43 Although chasing the enemy, there was time to pause for a little GI side show on the way.

44 As the war went on in Italy you ran across quite a few nice Wacs working in headquarters.

45 Before Rome fell we were still in England, training very hard, getting ready for D-Day.

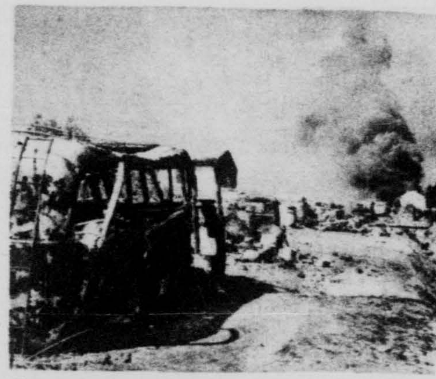
48 D-Day came, on June 6, 1944. Some lost time in the water before reaching France.

49 It seemed quite a way from the boats to shore. The invaders carried a lot of equipment.

51 We got farther inland and met some of the people. It was easy to get a laugh.

CONTINUED

The GI's War in Europe



52 We met up with French civilians who were very nice about quenching a soldier's thirst.

53 The Ninth Air Force needed air fields in France. Engineers were there to lay them out.

54 The break-through at St. Lo began in July, and then we broke out into the French plains.

55 The Krauts retreated, leaving a lot of their baggage twisted and burning on the roads.

56 In Italy we were moving to the shore to board landing craft and invade southern France.

57 We hit southern France on August 15 and met some Maquis who were veteran Nazi-fighters.

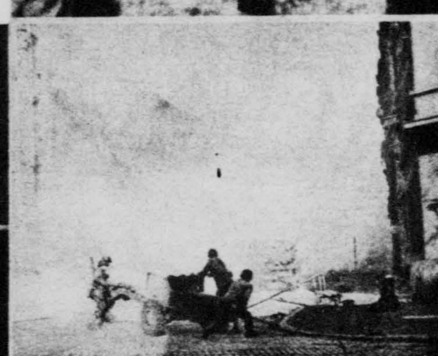
58 Ordnancemen had plenty to do keeping guns in repair, even salvaging enemy weapons.

59 We plowed into Brittany and attacked the port of Brest, fighting through the streets.

60 The liberation of Paris came on August 25, and people turned out to cheer and sing.

62 We went through the old Maginot Line, which didn't look so tough when you got close.

63 For many GIs entering Belgium it was a nice thing to be appreciated by the right people.



64 We got through Huertgen Forest in November, but it was a slow, cruel push for the Infantry.

61 We couldn't all stay and celebrate in Paris but we put on a good show on the way.

65 Many GIs found that Army nurses were the only good part of lying wounded in a hospital.

66 Aachen, which was surrendered on October 20, was the first big German city we fought for.

67 A break was a break anyway you looked at it, but having some mail made it even better.

THE LAST TIME

This was the real Armistice Day—on Nov. 11, 1918. Here on Fifth Avenue in New York were the flags, the impromptu parades, the traditional ticker tape floating down as people shouted and screamed their joy.

At the end of the first world war, there were two celebrations—just the same as now.

THE armistice that ended the first world war, like the surrender that ended this one, was celebrated on the home front twice. Last time, again like this time, it was generally believed that the Germans had been seeking peace terms for at least a month before the war actually ended.

When United Press flashed word to its client papers in the U.S. that an armistice was signed Thursday, Nov. 7, 1918, homefolks in hundreds of cities didn't doubt the report. The premature news reached the States at 11:56 A.M. Radio sets being almost unknown in those days, word was spread chiefly by the newspapers. Extras were printed all through the day.

Factories, boats and railroad locomotives tied down their sirens and whistles. Workers poured out of shops and offices, which closed for the day. In New York and Chicago, on the West Coast, from the Gulf Stream to the Great Lakes, people came out on the streets to hold impromptu carnivals. Only food stores and essential means of transportation kept going.

The Secretary of State, Robert Lansing, denied the armistice report in Washington and newspapers began to print the denial late in the afternoon. This had small effect on dampening the public spirits.

The United Press didn't concede that day that it had erred. There have been many versions of how the mistake occured. According to one version a United Press reporter in France apparently mistook a temporary cease firing order (issued to let the German armistice commission pass through the fighting lines to confer with Marshal Foch, Commander in Chief of the Allied forces) as the signing of the armistice.

Persistent denials by government officials didn't quiet the celebrations until late evening. By that time scores of parades had been held; scores of mayors had addressed victory rallies. Thousands of citizens had got drunk and some newspapers were complaining of hooliganism. The premature celebration was confined to the U.S. The false report had not been circulated in other countries.

FOUR days later, Nov. 11 at 2:45 A.M., while the country slept, the word of the real armistice arrived in Washington. Newspapers rolled out extras. Sirens started again—the second time in four days. At first people were hesitant to believe the news, genuine this time. Then as the realization spread that the war had ended at last, that this armistice report had been announced by Washington, the country went into a wild celebration.

When day came, people joined with the same spontaneity in the official celebrations. Schools closed. Business shut down. In almost every village and town victory rallies were held. Churches were crowded.

As the night of Nov. 11 came, the clamor quieted. In most cities the streets cleared. People went to their homes. Twice in less than a week the country had experienced a great emotional turmoil.

During the day Allied capitals also had celebrated. In London, throngs massed in front of Buckingham Palace where they were greeted by King George and Queen Mary.

Paris turned out in riotous carnival. Gen. John J. Pershing, Commander in Chief of the American Armies, described the scene in his book, "My Experiences in the World War":

"It looked as though the whole population had gone out of their minds. The city turned into pandemonium. The streets and boulevards were packed with people singing and wearing all sorts of odd costumes. The crowds were doing the most clownish things. One could hardly hear his own voice it was such bedlam.

"It was next to impossible for our automobile to make any headway through the mass of humanity. We were two hours in crossing the Place de la Concorde the crowd was so dense. It happened I was recognized before we had gone very far and French men and women boarded the car, climbed on top of it and got inside and no amount of persuasion would prevail upon them to let us pass. Finally, a group of American soldiers who were enjoying the hilarity came along and seeing our helpless condition took charge and succeeded in making an opening sufficiently large to permit the car to move a yard or so at a time until we got free. If all ridiculous things done during those two or three days were recorded the reader could scarcely believe the story. But it was Paris and the war was over."

THE armistice climaxed negotiations which had been opened by a note from the German high command to the Allied high command on Oct. 5. The great Allied offensive designed to end the war had been opened Sept. 26. Before this massive onslaught the Germans were falling back everywhere. The Germans were running out of food and ammo. Most of all they were running out of soldiers.

Open mutiny spread in Germany. On Oct. 29, German sailors rebelled at Kiel. By Nov. 6, 40,000 armed Germans seized Hamburg, Bremen, Hannover, Brunswick and Cologne.

Field Marshal Ferdinand Foch was authorized by the Allies Nov. 5 to sign the armistice for the Allies. The German armistice commission met Foch Nov. 7. Foch gave the German commission the Allied terms and warned that these terms must be accepted or rejected within 72 hours.

Field Marshal Paul Von Hindenburg told Kaiser Wilhelm he could not guarantee the Kaiser's safety. On Nov. 9, the Kaiser renounced the throne. Early on the morning of Nov. 10, the Kaiser fled to Holland.

At 5:00 A.M., Nov. 11, in Foch's railway car near Rethondes, France, the Germans signed the armistice terms. A German officer said to Foch, "A nation of 70 millions suffers but does not die." Foch shrugged, replied: *"Tres bien"* (very well).

The word of armistice reached the troops sometime after 6:35 A.M., sped to every battle front as fast as jubilant men could flash the historic news. The war that had begun on July 28, 1914, was over.

SPORTS

By Sgt. FRANK WOOLNER

Fish and Fowl Now Face Soldier Blitz

Beaucoup fish and beaucoup fowl await the field-and-stream loving GI upon his return to civvies. Backed by almost four years of inactivity and a flock of old-timers, who have been plumping steadily for conservation and increased stocking of wild life, hunting and fishing should reach an unprecedented boom during the early post war years.

"Rookie sportsmen," who, after months in ODs, know what the score is when it comes to bivouacs and M-1s should flock to the great outdoors by the thousands.

They'll have all the advantages: covers full of game, streams and lakes swarming with fish. Military equipment will be dumped on the market for them to buy. GI guns, clothing and duffle of all kinds, adaptable to outdoor living, will be easy to purchase. Ordnance inventions will be molded to benefit new sporting weapons, rods, lines and reels.

Practically all of the sporting goods houses in the U.S. are now engaged in war work. Their wartime research for better equipment will be reflected in the outdoor equipment of tomorrow. Plastics, which have flourished under wartime conditions, will probably be a sensation. Canoes and boats of one-piece construction, light and indestructible, will flourish. Outboard motors, profiting by battle needs on landing craft and assault boats, are sure to exceed pre-war efficiency. Fishing reels, no longer manufactured by the big concerns, will gain by their designer's present research in precision instruments and will undoubtedly be lighter and stronger.

A contract to build indestructible ski-poles for the Army proved to be a bonzana for one company. By impregnating split bamboo with liquid bakelite, they produced a fly rod which is impervious to heat or cold, wet or dry weather. The bakelite, infused into the pores of the bamboo, joins and seals the rod against moisture. Thus eliminating the use of varnish or glue which chips under pressure.

Similar government contracts have resulted in other new discoveries. Binoculars and telescopic sights are far ahead of pre-war standards. Gun steel will be better than before. Savage Arms Company has a classy 12-gauge automatic which weighs less than seven pounds. A light, tough alloy receiver is the answer. The Browning type auto-loader has always been a natural pointer. Its only drawback has been its extra weight. Savage has cancelled out the trouble.

Army equipment, dumped on the market, will appeal to sportsmen especially. The list of enticing doodads is long and varied and runs the gamut from jeeps to Coleman stoves.

The jeep is not an economical buggy. It burns more gas than Tommy Manville's Duesenberg on a cross country wife hunt. Still, for hunting and fishing country, it will easily pay for itself. A lot of well-heeled ex-GIs are going to purchase jeeps.

For duck hunting, camouflage nets may be used to build better blinds. Sniper suits or fleece-lined flight jackets and pants issued to the Air Corps ought to come in handy. If, as it should in good duck weather, the rain is spitting nails in your teeth, an oilskin gas decontamination suit would complete the picture of solid luxury. And, of course, a Coleman stove for coffee.

Outdoor clothing of all types has been affected by the war. Tougher, more snagproof materials are one development. Warmth, with attendant lightness, is another. The regular Army combat boot is ideal for early upland bird cover and the winter issue shoe-pac is actually the same footwear that sportsmen have been using for years.

For early spring and summer fishing, the Army's special jungle boot, which is extremely light and high topped, constructed of canvas and rubber, is a sure sell-out to anglers. That aforementioned gas decontamination or "rain suit," with the hood and zip-up features, is another development that will appeal to those genial maniacs who like to take rainbow trout in chill April showers.

Down-insulated sleeping bags and light, waterproof tents have been vastly improved by Army research. They'll be used. However, the GI form-fitting "foxhole straitjacket" and the puptent aren't roomy enough for postwar sportsmen who will want to spread out.

Take a look at the football helmet Verna Thompson's modelling. It's an acrylic plastics job, better protection than the old kind and one of many indirect products of wartime research.

Paradoxically, the weapons of war, so useful in hunting down Jerry, are a disappointment to the veteran sportsman. All military weapons are constructed for one purpose, the swift chopping down of a man. It does not follow that the same rifles and carbines are necessarily adequate for the pursuit of game. Take, for example, the M-1 rifle. The Garand is the finest military chopper in the world but a man would get stoop shouldered if he carried it for a day of hard hunting in the big woods. Possibly a good gunsmith could convert the M-1 into a sporter. It would have to be restocked and trimmed of all excess weight. Even at that, your old pal of the Ardennes might be a pain in the Rockies. The load, however, is ideal. GI 30-06 is still considered one of the most versatile all-around cartridges on the market. A great many doughs are planning to use the M-1 to kill deer after the war. Okay, it'll kill deer. But unless something can be done to relieve that extra poundage, your hunting trip is going to be a test of stamina rather than sport.

When you try deer hunting instead of kraut killing, your aim had better be just as good. If you miss, fellow hunters may cut off your shirttail, autograph it and keep dated trophy as evidence to discourage bragging.

The Johnson semi-automatic rifle is another military arm which is sometimes cited as a postwar sporter. This one, according to experts, should be a rugged, reliable big-woods weapon, in the sporter version.

The Springfield 1903 job may be very profitably converted. It could be trimmed down, restocked, its action honed and a scope sight installed with ease. Similarly, the Jerry Karabiner-98, the Jap Arisaka and others of light, bolt-action design, may be trimmed down and prettied for plinking in the tall timber.

American sportsmen are worrying about our M-1 carbine. The idea seems to be that every Joe in the Army plans to take one home and use it to kill deer. In fact, ever since the new carbine was developed by Winchester, arguments have waxed fast and furiously over its merits as a game killer. The carbine is a sweet little pea-shooter. It balances nicely. It shoots where you point it. But will it kayo a deer? Gun savants say that a 30-caliber carbine will kill such game but that it is not an adequate cartridge for big-woods sport. Unfortunately, the load is too large for rabbits and other small game and too meager for deer. On medium-sized prey, such as coyotes, the carbine might qualify but it is dwarfed by the performance of a number of extremely high-velocity, flat-trajectoried rifles which were developed especially for such work.

For the great reconversion to a civilian pursuit of happiness, afield, we can use the jeeps, painted any color but olive drab! We'll insist on the newest improvements in fishing tackle, boats, outboard motors and gun gadgets. We'll even wear a sniper-suit if that'll help to keep greenheads planing in to a set of blocks.

American sporting goods manufacturers are set to give us the best hunting and fishing equipment in history.

HEADQUARTERS
923D ENGINEER AVIATION REGIMENT

APO 126 US Army
12 August 1945

BRIGADIER GENERAL EDMUND C LANGMEAD
U S Army Air Force Service Command
Patterson Field, Ohio

DEAR GENERAL LANGMEAD:

I am sending you a copy of the 923d Engineer Aviation Regiment's "Workin' On Those Airdromes". This book is a photographic record of our Regiment's achievements overseas; the pictures were taken by men of this Regiment, and the book was edited and printed by our Reproduction Section. Since you yourself were closely associated with this Regiment during a portion of its history, I am sure you will be interested in having this copy.

Sincerely,

H R HALLOCK
Colonel, CE
Commanding

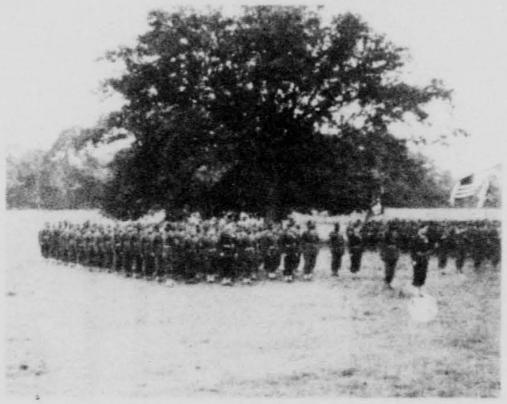
FOREWORD

All of us who have served in the 923rd Engineer Aviation Regiment and its Battalions can feel justly proud of the organization in which we have served and in our contribution toward the total defeat of Nazi Germany. The mission for which we trained in Florida and Georgia during 1942 and part of 1943 was to construct airfields from which our Air Forces could fly. Since the day we arrived in Europe we have been working on those airdromes; we have carried out our mission in a superior manner, and through our efforts the final day of victory has been hastened. The thoughts of every soldier at the present are directed towards the time when he will return to his home. Whatever the future may hold in store for him, however, he can take pride in the knowledge that his own efforts have already brought that time nearer. This book, published for the soldiers of the 923rd Engineer Aviation Regiment, is dedicated to them; they are the ones who have made our fine record possible. It is intended that this book serve as a reminder of the years that we have served together, and of the achievements of the 923rd Engineers.

The two greatest accomplishments of the men of this Regiment were the construction of Eye and Debach airdromes in England. The men of this organization worked long hours, learned new trades and skills, and gave up much treasured off-duty time to meet the exacting completion dates which were imposed upon us. On D-Day, 6 June 1944, the first flight of Liberators took off from Debach; these planes together with those from Eye which had already been bombing Germany for several days, dropped many hundreds of tons of bombs on the invasion beaches of Northern France in support of the invading Armies.

During the time Eye and Debach were being constructed, and subsequent to their completion in the Spring of 1944, men of the Regiment worked on 61 heavy bomber stations, building new facilities, new roads, maintaining and resurfacing runways and taxiways with asphalt and concrete, and performing other essential tasks so that the 8th Air Force could keep up its assault on Germany. It is certain that without the work performed by our men the continued missions of the heavy Flying Fortresses and Liberators would have been impossible during the winters of 1943—44 and 1944—45, as in many cases the condition of the fields became critical.



In France, units of this Regiment built airfields for the First Tactical Air Force supporting the 7th Army and the First French Army advancing from the south. In one case the Battalions joined together for the quick construction of a field for French fighter-bombers at Luxeuil, finishing the runway in record time just as the first planes arrived. Later we maintained and built new facilities for Ninth Air Force fields. After V-E Day the Regiment took its part in the Occupational Air Force Program, and completed two of the first fields which are to be used in policing Germany and enforcing the peace which we have won.

Our task did not require us to engage in actual combat with the enemy, but as we watched the heavy bombers roar off in the morning from the fields which we had constructed in England, and in France as we watched the fighters return from their strafing missions over the front lines to the haven we had provided for them, we felt a oneness with the combat men of the Air Corps and had a realization of the fact that we were playing a part in paving the way to victory. Enemy activity against us was slight, but the frequent appearance of raiders over Eye and Debach, the bombing of the perimeter track at Debach, the buzz bombs in Kent, Haughley Park, and Oakley Park, all made us alert to the constant threat. The planes which left in the morning from our advanced landing grounds and did not come back, the damaged planes we helped to salvage, and the occasions, such as at Tannington and on a beach in Southern England, when we laid down temporary strips for enemy damaged bombers to get off, all made us aware of the existence of the conflict.

All of our time was not spent in airfield construction. Our Regiment was made famous by our 200 voice U.S. Army Negro Chorus which sang in Royal Albert Hall in September 1943 with Roland Hayes and the London Symphony Orchestra. Ambassador John Winant, many British notables, and the British press acclaimed our singers so enthusiastically that arrangements were made for a tour of Liverpool, Manchester, Glasgow, and Edinburgh. Since that time our singers have entertained at hospitals for wounded combat soldiers, at Red Cross Clubs, in British churches, for other units, and for civilian gatherings, in England, France, and Germany. Our military bands, the Rio Rita band, the Reveilleers, the Rhythm Rockets, and the famous "Harlem Express" variety show, all brought recognition to the Regiment and pleasure to ourselves and other allied soldiers. We were honored on several occasions with visits and inspections by many important personages. General Devers, commanding the European Theater of Operations and General Lee, commanding the SOS, both commended us on the fine appearance of our units and the soldierly qualities of our men. General Moore, the Chief Engineer, General Le May, commanding the 3d Bomb Division, General Ralph Royce and General B. O. Davis made several visits to our units and commended us on what they saw. Bishop Gregg, and Walter White, President of the NAACP, visited us in the Spring of 1944.

EYE AND DEBACH AIRDROMES

Eye and Debach Airdromes were almost identical in layout and design, both having been built in accordance with the British Royal Air Force specifications and standards. On an airdrome of this type complete facilities had to be provided for a heavy bomber group, complete with housing, messing, and bathing facilities for over 3000 men, recreational, hospital, and administrative buildings, together with the three runways and connecting taxiways, parking space for 60 airplanes, large storage for aviation fuel, bomb storage, a technical area with hangars, warehouses, etc. and a complete water supply system, sewage system, telephone system, and electrical system, including airfield lighting. Due to the possibility of enemy bombing attacks, these various facilities were separated into "dispersed sites" which were spotted around the English countryside as convenient as possible to the runway. All the living huts and many of the other buildings were made of prefabricated Nissen, a corrugated iron building with concrete floor and brick ends which closely resembles a tin igloo. The remainder of the buildings were made of brick; there were a total of two and one-half million bricks in each of the fields, in a total of over three hundred buildings which were provided with lights, plumbing, blackouts, linoleum floors, necessary carpentry work in the buildings which required it, partitions, cupboards, and interior decorating, and all the sites were neatly landscaped with concrete sidewalks and sod. All the sites were joined together by roads; the total concrete poured in these roads and on the runways and taxiways would be equivalent to fifty miles of 20' wide road, eight inches thick. At both fields an effort was made to complete the facilities which we could use as quickly as possible. The living huts were completed and lived in; the showers were completed and used; electricity and water were brought in; warehouses were completed and used for supply rooms; the office buildings were completed and used for Battalion and Regimental Headquarters; the theater was finished and used for our entertainment, and a Red Cross Club with snack bar was set up in the completed Aero Club.

Eye airdrome was started by the 829th Battalion in September 1942. The 827th Battalion arrived in December to help out, and the 859th Battalion arrived in the following May when the 829th Battalion left. The bulk of the work was done in the summer of 1943, the 827th setting records in pouring concrete, while the 859th made their mark in building construction. The airdrome was declared operational and turned over to the Air Forces on 7 December 1943, two years after the attack on Pearl Harbor, and on 1 April 1944, the entire field was completed and occupied by the 8th Air Force.

Debach airdrome was taken over from another Battalion by the 829th Battalion in May 1943, when it was about 20% complete. The 847th Battalion arrived on the 1st of July to assist in the construction, and had the task of building the hospital site, mess site, and bomb stores. The 829th concentrated mainly on the runways, taxiways, and hardstands, so that by the end of the summer most of the concrete work was done. Debach was on low priority during the winter of 1943–44, but in February it was decided that the field must be completed by the 1st of May. On the night of 30 April men were busy all over the field putting on the finishing touches, a spot of paint on the big hangar, a window pane here, a little sod there, so that on the morning of the 1st of May the field was complete and turned over to Major General Le May, representing the Air Corps, by Major General Moore, at a very impressive ceremony. At the end of the ceremony Joe Louis, World's Heavyweight Boxing Champion landed on the field in a heavy bomber, and addressed the men in the Aero Club.

The completion date had been met only through an all out effort on the part of every soldier at Debach, and the finished airdrome is a fitting monument to those men who worked long hours without a day off during the months of February, March and April 1944.

The Foreign Service
of the
UNITED STATES OF AMERICA

Air Mail

CONFIDENTIAL

Ottawa, November 22, 1944.

Dear Jack:

You will recall a memorandum of conversation we sent you indicating that Air Vice Marshal Stevenson had returned from his tour of the Pacific area unimpressed by British operations there and determined to recommend to his Government that the R.C.A.F. operate with us in the Pacific.

Colonel Graling has now been talking to Air Marshal Leckie about Pacific operations of the R.C.A.F. after V-E day. Leckie says that Canada could not afford to buy American planes and equipment necessary to operate with the United States forces and that our people certainly would not want the R.C.A.F. with their present British-designed planes and equipment. He said that the R.C.A.F. had no alternative and must operate with the British in the Pacific theater in spite of their preference to operate with us.

Having in mind the War Department's desire to Americanize and standardize armaments in this hemisphere, we wonder whether this situation might not offer an opportunity to bring about the transition of the R.C.A.F.

John D. Hickerson, Esquire,
Chief, Division of British Commonwealth Affairs,
Office of European Affairs,
Department of State, Washington, D. C.

from British to American equipment. We do not know, of course, what the supply position in the United States will be after V-E day, but if a surplus of planes and equipment should develop might it not be possible to take advantage of this evident inclination at the technical level in Canada toward operating with us and offer to equip an R.C.A.F. unit, either at a cost which the Canadians could afford to pay or at no cost at all to them?

Sincerely yours,

s/ Ray Atherton

AMERICAN - BRITISH STRATEGY

Date: 11/7/42.

GERMANY OR JAPAN FIRST?

1. The fighting power of Germany is on the wane. What she needs above all is a period of recuperation. Japan's war effort is incapable of much expansion provided her communications with Germany remain severed.

2. Shipping and escorts are vital to deploy the forces of the United Nations against the enemy. For a given amount of shipping more United States forces can be deployed against Germany than against Japan.

3. We have two broad choices:-

(a) to continue our present policy of defeating Germany whilst holding Japan.

(b) while holding Germany, to turn all available resources against Japan first.

4. If Germany is allowed breathing space to recuperate for a year or more she may well become unbeatable. Furthermore, it is the Germans who are sinking shipping.

5. Important though China is as an ally in the war against Japan, Russia is a far more important factor in the war against Germany. By attacking Germany we are helping Russia; when Germany is defeated Russia might be of great assistance in the defeat of Japan.

6. For these reasons it is considered that, in order of time, the defeat of Germany must come first and the defeat of Japan second. It is essential, therefore, to maintain the present strategy and to direct all efforts to the early and decisive defeat of Germany, diverting from that object only the minimum of forces necessary for the safeguarding of interests in the East, until we are in a position to turn, after the defeat of Germany, to a full-scale offensive against Japan.

CONDUCT OF THE WAR UNTIL GERMANY IS DEFEATED.

7. The security of North America and the United Kingdom is recognized as the first charge on our military resources. We must, however, guard against over-insuring both in the United Kingdom and the Western Hemisphere in order that all possible weight be given to early offensive action.

8. Similarly, in order to secure our sea routes in the North and South Atlantic, the Pacific and Indian Oceans, we must develop an effective surface and air offensive on a world-wide scale against the increasing U-boat fleet.

9. The Middle East depends for its maintenance on the adequate protection of Indian Ocean communications. The security of the Middle East is of great importance as preventing the junction of the Germans and the Japanese, securing the Russian Southern flank and protecting the Abadan Oilfields.

#5

10. A Japanese occupation of India would sever communications with China, deprive us of the manpower and growing productive capacity of the Indian Continent, and seriously threaten the Middle East.

11. The security of Hawaii, Australia and New Zealand, and the chain of bases across the Pacific are essential to the development of the final offensive against Japan.

12. It is the weight of the Russian Army which is most rapidly sapping German strength. Russian resistance must be stimulated by maintaining the flow of supplies and by intensifying offensive action against Germany.

OFFENSIVE ACTION AGAINST GERMANY.

13. Invasion of Europe against an unbroken German Army would do more than anything to help Russia. Sufficient experience has already been gained, however, to show that it will not be tactically possible to establish and maintain a large Allied Army on the Continent until German military power has been broken. An unsuccessful invasion would be a disaster.

14. Germany in her present condition must be regarded as a powerful fortress. Heavy artillery preparation is an essential preliminary to the reduction of fortified positions. So now by heavy air bombardment we have the means of extending this process on a grand scale right to the heart of Germany. By this means we strike directly at her economic system, her submarine construction, and the sources of her air power, while at the same time undermining the morale of the German people.

15. While the enemy's attention is focussed on Russia the Allies have the initiative in strategic bombing which we should exploit to the full.

16.- We can now drop 6,000 to 7,000 tons of bombs per month on Germany. We should aim at dropping at least 20,000 tons a month on Germany by June, 1943, and at attaining a force of about 4,000 to 6,000 heavy bombers by April 1944, with a monthly bomb delivery of 60,000 to 90,0 0 tons. It is believed that this can be achieved by a combined effort.

17. No one can predict how soon German morale will break. We must therefore be prepared to seize a favourable opportunity of re-entering the Continent at the psychological moment.

18. All possible operations to supplement the main bombing effort should be undertaken. The blockade of Europe, which will be greatly strengthened by the occupation of French North Africa; continued raids in Northern Europe against U-boat bases; sabotage in German-occupied Europe on a steadily increasing scale; amphibious operations to take advantage of success in the Mediterranean. All these activities will increase the general pressure on Germany and help to weaken her military position.

19. The occupation of the whole Southern shore of the Mediterranean should afford great opportunities for exploitation against the southern flank of the Axis, beginning with attacks against Sardinia and Sicily. This would complete the re-opening of the Mediterranean Route. We should then be able to threaten Italy and so cause such a drain on Germany as to contribute greatly to the relief of the Russian Front.

HOLDING JAPAN

20. The security of essential Allied bases within Japanese reach should be ensured by offensive operations on a scale sufficient to contain the bulk of the Japanese forces in the Pacific. Continued attrition of Japanese shipping will also assist the object.

21. The operations in the South West Pacific during the last few months have forced the Japanese to make this area their principal theatre of operations. The threat to India and the Indian Ocean has thus been temporarily removed, and has allowed land and air forces intended for India to be diverted to the Middle East. Furthermore, the Solomon Islands campaign has assisted Russian resistance to Germany by staving off a possible Japanese attack on the Maritime Provinces.

22. Continued operations in the South West Pacific will help China by containing Japanese forces. The only way direct assistance on any scale can be given to China is by re-opening the Burma Road.

CONCLUSIONS.

23. The following should be American-British world strategy until Germany is defeated:-

(a) In order of time the defeat of Germany must come first and the defeat of Japan second. Until Germany is defeated Japan must be firmly held.

(b) The security of essential sea and air communications and of vital areas, namely, the United States, the United Kingdom, the Middle East and India, and bases in the Pacific must be a first charge on our resources.

(c) An increasing sea and air offensive must be developed against the serious submarine menace.

(d) Everything possible should be done to keep Russia an effective fighting force.

(e) Offensive action should be taken finally to check the Japanese threat to allied bases and communications. Such offensive action will contain Japanese forces and so prevent her liquidating China or successfully attacking the Western Coast of America, Russia, India, Australia or New Zealand.

(f) With the object of keeping China in the war offensive action should be undertaken in Burma with a view to the ultimate re-opening of the Burma Road as soon as the necessary forces can be provided.

The following should be the policy for the defeat of Germany:-

(g) A large scale invasion of Europe against unbroken German forces is not a practicable operation of war. Our main strategy should be to break German military power by the destruction of the German industrial and economic war machine before we attempt to re-enter the Continent.

For this process, apart from the impact of the Russian land forces, the heavy bomber will be the main weapon, backed by the most rigorous blockade and by operations calculated to stretch the enemy forces to the greatest possible extent.

(h) The creation in the shortest possible time of a great Anglo-American force of 4000 to 6000 bombers by April 1944 should have high priority, qualified only by the necessity to provide adequate air forces for the maintenance of sea communications and for the support of such land operations as it is decided to undertake. Any decision to undertake offensive land operations during the period of air attack on the German industrial and economic war machine must be guided by the value of these operations compared with the consequent diversion of air effort from the principle objective - the German war machine.

(i) Priorities in the spheres of manpower, material and production should be adjusted accordingly.

(j) Our main amphibious operations in 1943 should be conducted in the Mediterranean with the object in the first instance of completing the reopening of the Mediterranean Route. Small raids on the North West coast of Europe and larger raids against U-boat bases should also be carried out.

(k) Plans and preparations which do not conflict with (g) and (h) above should be made for re-entering the Continent in the event of a break in German powers of resistance.

7th November, 1942

For this process, apart from the impact of the Russian land forces, the heavy bomber will be the main weapon, backed by the most rigorous blockade and by operations calculated to stretch the enemy forces to the greatest possible extent.

I have read this and attached detailed report

January 13, 1942.

The recommendations appear to be sound.
GCM

MEMORANDUM FOR THE CHIEF OF STAFF:

"How can the AAF (Victory Program) succeed in softening up the enemy when the RAF and the GAF have been unable to do the same thing?"

The subject question is answered to a large extent in the recommendations of three of our most highly qualified young AAF bombardment experts (Majors Anderson, Montgomery, and Flanick) after a tour of AAF bombardment units and a month in England with the Bomber Command RAF, in their attached report which is briefed as follows:

1. To avoid duplicating the errors of the RAF and, to a considerable extent the GAF, the Bombing Board recommends:

a. No material change in our bombs, sites, tactics, or plans for employment of heavy bombers.

b. The organization of operational training units and improvement of personnel policies applying to bombardiers and navigators.

c. "U. S. bombardment forces be not committed to a major theater until such time as each individual combat crew has demonstrated its fitness in the following:

(1) Navigate both day and night to within five miles of the objective under all conditions of weather and visibility, taking evasive action during the entire final flight over assumed enemy territory.

(2) Locate and identify specific targets contained within the objective under simulated operational conditions.

(3) Bomb accurately targets illuminated by flares.

(4) Bomb accurately using bombing approaches of preferably 20 but not in excess of 30 seconds.

(5) Return to home or alternate bases under all conditions of simulated failure of radio and navigational aids.

(6) Unit tactical procedure."

2. The offensive efforts of the RAF have been almost wholly ineffective (harassment only).

a. Only 25% to 30% of the bombardment airplanes succeed in locating their targets.

(1) This poor performance is due principally to their own failures in navigating and in their misuse of good meteorological data.

(2) This failure is due in part to the effectiveness of hostile antiaircraft searchlight and night fighter cooperation, use of decoys, and antiaircraft gun fire.

b. After having been located, the chances are very remote that the target will be hit.

#6

SECRET

1842

(1) Their inability to hit the targets that have been located is due principally to their own failures in having initially expended their trained personnel, having trained before the war to a very low standard and with an inferior bombsight and in continuing to attack fixed precision targets (Scharnhorst and Gneisenau) knowing that their bombs may fall anywhere within six to ten square miles.

(2) To a lesser extent, their inability to hit the targets that have been located is due to the effectiveness of the hostile antiaircraft searchlight and night fighter combination and the use of decoys, but not due to antiaircraft gun fire or to night fighters or searchlights working alone.

3. Current AAF training is not satisfactory for operations in the European or other theaters.

(4. An obvious conclusion is that our Victory Program air force will fail in accomplishing its mission unless our training procedure is revised. It is equally obvious that another reason for the failure of the RAF (and GAF) to exhibit the determined aggressiveness essential to successful bombardment--demonstrated by the Japs at Pearl Harbor--depends on adequate prior training. Attrition in airplanes in the Bomber Command of the RAF is over 50% per month and at the same time they are accomplishing no material results. The inevitable consequence of this vicious cycle which is initiated by entering combat without the training required to effect material accomplishment and at the same time having to withstand extraordinary attrition has resulted in the unpalatable fact that the bombardment combat crews of the RAF are no longer trying.)

L.S.K.

Note: On January 27, General Arnold directed me to take the necessary action to have directives with teeth in them issued to assure the implementation of the recommendations by this Board. He further directed that the restrictions recommended by the Board as to the dispatch of units to theaters would have to be applied with some discretion and that he was particularly anxious not to prohibit the movement of a large airplane into a theater if a single member of the combat crew failed to meet to the full 100% the requirement set up by the Board.

This information was transmitted to Colonel Sorenson, Director of Bombardment, on the same day he stated he would be responsible for the preparation of such directives. LSK

February 14, 1942

MEMORANDUM FOR THE ASSISTANT CHIEF OF STAFF, WPD:

Subject: War Department Plan.

1. The current troop basis and equipment objectives are based upon the so-called Victory Program, modified as necessary by maximum production expectations. This program does not constitute a workable basis for the organization, training and movement of either ground or air units until translated into a directive setting forth the approximate rate of entry of organizations by type into the several theaters.

2. The strategic plan upon which the Victory Program was based cannot now be accepted as a continuing policy since it envisages winning the war by adopting the strategic defensive on the surface with offensive measures restricted to night bombing. Night bombing has not so far proven to be effective to the extent of securing destructive manufacturing facilities to prevent operation except in unusual cases. Germany has already, by westward movement and decentralization of industry, begun to nullify the possibilities of day bombing against industry.

3. In connection with plans being prepared by your division for eventual submission to the Chiefs of Staff Committee, the following must be given full consideration:

a. The war cannot be won by the continued dissipation of military resources all over the world.

b. The war cannot be won by attempting with relatively small forces operating on exterior lines to defeat an enemy with superior forces operating on interior lines.

c. While the war may not be won by air bombing, the bomber is the only weapon we now have that can reach the heart of enemy occupied territory.

d. The initiative must be seized from Germany in

THIS PAGE IS UNCALSSIFIED

at least one theater.

e. Russia must be supported by forcing the diversion of air and ground forces from the Eastern Front.

f. Defensive air forces for protection of localities, no matter how important, which are subject to hit and run raids only, will be drastically reduced.

g. The immediate strategic objective of the Air Force is the German Air Force. Coordinated action by all types of aircraft is enjoined. Distribution of all Allied airplanes produced to best meet our combined requirements is a necessity.

h. The immediate strategic objective of the Ground Forces is the training and assembly of materiel for the invasion of German-held territory.

i. The ultimate (possibly 1943) strategic objective of the combined Air and Ground Forces is the invasion of German-held territory and the defeat of his field forces.

Chief of Staff.

MEMORANDUM FOR THE CHIEF OF STAFF:

Subject: War Department Plan

In connection with your statement at the White House this morning concerning "things we should not do", I am attaching herewith a memorandum which I think might well be sent to War Plans Division for their use while preparing their study for the Combined Chiefs of Staff.

I would suggest, however, that it go to the new War Plans Division rather than the present War Plans Division so as to have continuity of thought and effort.

H. H. ARNOLD,
Lieutenant General, U. S. Army,
Deputy Chief of Staff for Air.

Incl: Memo for Ass't. Chief of Staff, WPD, 2/14/42, frm. Chief of Staff re above subject.

MID 334.3

January 7, 1942

MEMORANDUM FOR THE CHIEF OF THE ARMY AIR FORCES:

Subject: Recommendations of Bombing Board.

1. Final report of Bombing Board on trip to England, December 17, 1941, subject, Final Report of Bombing Board, Majors F. L. Anderson, Jr., H. G. Montgomery, Jr. and E. Flanick, on trip to England, a copy of which is inclosed, prepared by The Bombing Board, contains the following recommendations:

It is recommended that:

(a) For bombardment, QUALITY as gained by increased and sufficient training be emphasized, with desired numbers obtained from larger and/or more schools. It should be held in mind that ten (10) properly qualified combat crews can do the job of fifty (50) to one hundred (100) poorly trained crews.

(b) Bombardment Operational Training Units, separate and distinct from the bombardment units of the Army Air Forces, be established immediately.

(c) U. S. Bombardment Forces be not committed to the European Theatre until such time as each individual combat crew has demonstrated its fitness in the following:

(1) Navigate both day and night to within five (5) miles of the objective, under all conditions of weather and visibility, taking evasive action during the entire time of flight over assumed enemy territory.

(2) Locate and identify specific targets contained within the objective under simulated operational conditions.

(3) Bomb accurately a target illuminated by flares.

(4) Bomb accurately using bombing approaches of preferably twenty (20) but not in excess of thirty (30) seconds.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

(5) Return to home or alternate bases under all conditions of simulated failure of radio and navigational aids.

(6) Unit tactical procedure.

(d) A career be provided qualified bombardiers and navigators.

(e) Personnel be most carefully selected for bombardier and navigation training.

(f) The following equipment be developed and produced:

(1) A two seater reconnaissance bomber with maximum speed possible.

(2) An escort fighter with the same range as bombardment.

(3) Twin engine long range dive and torpedo bombers.

(4) Suitable bombing and navigation flares.

(5) Adequate navigation aids.

(g) Long range weather forecasting development continued to the utmost.

2. Under the provisions of AG 350.05 (12-2-40) M-B-M, December 3, 1940, subject, Initiation of action on Recommendations from Military Attaches, these recommendations are referred to your Division for action.

RAYMOND E. LEE,
Brigadier General, U. S. Army,

Washington, D. C.

December 17, 1941.

SUBJECT: Final Report of Bombing Board, Majors F. L. Anderson, Jr., H. G. Montgomery, Jr., and E. Flanick, on Trip to England.

TO: The Assistant Chief of Staff, G-2.

1. Schedule:

Departed Washington, D.C., October 22, 1941.
Arrived England, October 27, 1941.
Departed England, November 29, 1941.
Arrived Washington, D.C., December 10, 1941.

2. Purpose.

a. To determine the causes for the poor bombing results now being obtained in the European Theatre of War.

b. To determine the materiel, training, and tactical requirements necessary for the accomplishment of successful bombing, always holding in mind that the results obtained must justify the losses.

3. Activities visited.

a. Air Ministry.

Bomber Operations Section.
Air Raid Damage Assessment Section
Intelligence, R.A.F. Bombing Damage Section.
Weather Division.

b. Bomber Operational Units.

The Bomber Command
- Bomber Group 3
- Feltwell Station
- Oakington Station
- Bomber Group 5
- North Luffenham Station

c. Bomber Operational Training Units.

Upper Heyford Station (night)
Bicester Station (day).

THIS PAGE IS UNCALSSIFIED

d. Other

Armament School No. 1
Farnsborough Experimental Station
Ministry of Home Security, Research and Experimental Dept.
The Central Intelligence Unit
The Photographic Reconnaissance Unit
North Hold Station of the Fighter Command
Nuts Corner Station of the Coastal Command

4. R.A.F. Bombing Operations and Difficulties.

a. General.

During the present war, the bombing results of the R.A.F., as well as those expected of the G.A.F., proved to be far below pre-war expectations. During the first part of the war, day bombing was used to a large extent and fairly satisfactory results were obtained. However, with the loss of the original comparatively well-trained crews, and with the abandonment of day bombing because of too strong fighter opposition, results fell sharply off to their present low level.

b. Tactics, summarized.

(1) Night bombing. Operations are conducted by individual airplanes only, usually operating at a slow cruising speed with but a small fuel safety factor. Little co-ordination is exercised. Higher headquarters prescribes objectives, bomb loads, and time over target, with all other decisions of operations being left to the discretion of the station commander. Once dispatched, the individual crew is expected to locate, illuminate, and bomb the target without outside aids. Because of navigational difficulties, no efforts have been made to light the target and bring in the other attacking aircraft by flares, radio or other means. Also, because of navigational difficulties, and in order to conserve personnel and materiel, numerous comprehensive methods are used to bring the operating aircraft safely home.

(2) Day Bombing. R.A.F. day bombing operations have been limited to the following:

(a) Formations accompanied by fighters.
(b) Individual airplanes on shallow penetrations using cloud cover.
(c) Small formations flying on the ground, bombing from altitudes of less than 100 feet. This method has just been terminated because of excessive losses. Objectives were usually reached by the majority of the attacking aircraft, but fighters and antiaircraft were always ready on the return.

c. Locating the objective and starting the bombing approach.

THIS PAGE IS DECLASSIFIED IAW EO 13526

(1) Present degree success. It was admitted by the R.A.F. that while it was believed that the majority of the crews were able to navigate to within ten (10) miles of their assigned objectives, only between 25 and 30% actually succeeded in locating and bombing their assigned targets. This difficulty was not entirely unexpected as the G.A.F. in their blitzes on provincial English towns never succeeded in getting more than 40% of their aircraft over the target towns, the average being from 20 to 30%. This lack of success can be attributed to combinations of the following:

Faulty navigation
Weather
Low standards of bombing proficiency
Searchlights
Decoys
Antiaircraft fire
Night fighters

(2) Main difficulties.

(a) Faulty navigation. Weather was blamed for the most part, but after examining all the available data, it is the opinion of this Board that faulty navigation was the main trouble. Admittedly, weather contributed to a great extent. However, when it was considered that the better the weather, the greater the bomber effort ordered, and that the deeper the penetration, the fewer the airplanes reaching their objectives, faulty navigation is clearly indicated. Certainly, the present navigation training of observers before their assignment to operational units leaves much to be desired. Completion of but 60% (average) of the prescribed air training, little night flying, and limited training areas and altitudes preclude the attainment of a very satisfactory qualification.

(b) Weather. As is well known, the weather in this area is considerably poorer than in the U.S. However, the weather reporting and forecasting is excellent, provided that full advantage is taken of the information furnished, and the chances of crews reaching various vicinities can be fairly closely estimated. Once within five (5) or ten (10) miles of the target, though, and visibility becomes the prime consideration. Inasmuch as haze is normal rather than exceptional, and as the present type flares are practically useless for picking up targets under hazy conditions, the difficulties of this problem become obvious.

(3) Other difficulties.

(a) Searchlights. In addition to the searchlight belt that must be crossed in order to reach objectives in Germany, all important areas are surrounded by concentrations of searchlights. These lights cause interference as follows:

THIS PAGE IS UNCALSSIFIED

1. Their presence required avoiding action by the bombing airplanes, thereby increasing the navigational difficulties.

2. Once illuminated, aircraft must cease all else and attempt to escape because of the danger from night fighters.

3. After being caught in a concentration of eight (8) or more lights, members of the crew lose all adaptability to black-out conditions for a considerable period of time.

(b) Decoys. Many ingenious arrangements have been used, and part of the bombing effort is normally attracted to defensive decoys as well as to any fires that may have been started by previous attacks. To date, no method of identifying the true from the false has been used other than to take a little more time and have a closer look or to check the navigation.

(c) Antiaircraft fire. Insofar as locating and starting the attack is concerned, antiaircraft has played but a minor part. As with searchlights, its presence in quantity causes the attacking airplanes to take constant evading action with the necessarily increased navigational difficulties. However, none of the personnel concerned were particularly worried about it as long as due care was exercised in the selection of altitudes. Preferred altitudes were the two brackets from 100 feet on moonlight nights to 2,000 feet (providing no balloons were present), and from 10,000 to 15,000 feet. Very little was accomplished above 15,000 feet because of the difficulties of picking up the target, and none between 2,000 and 10,000 because of the danger from antiaircraft.

(d) Night fighters. Night fighters, other than in conjunction with searchlights, have had but little effect on preventing bombing attacks. A high percentage of shadowing cases have been observed, and it is believed that the G.A.F. has some sort of radio interception control that brings the fighter in but not close enough to enable him to pick up the bomber by eye.

d. The bombing approach and bombing accuracy.

(1) Average errors. All officers interviewed believed that if the target could be seen, precision bombing could be accomplished. A more accurate statement would be that one of the first requirements for precision bombing is the ability to see the target, as analysis reveals that the R.A.F. is not able to accomplish precision bombing even after picking it up. This is shown in tabular form below:

Bombing Conditions	Error in feet	Area covered by bomb pattern
Pre-war, day, unlimited sighting time, 10,000 feet bombing altitude	450	1/10 sq. mile

THIS PAGE IS UNCALSSIFIED

Bombing Conditions	Error in feet	Area covered by bomb pattern
War, day, target practice, unlimited sighting time, 10,000 feet altitude	900	1/2 sq. mile
War, night, fixed target (Scharnhorst and Gneisenau), heavy defenses, 12,000 to 15,000 feet altitude	3600	6 - 10 sq. miles
War, night, targets in Germany, heavy defehses	4500	15 - 20 sq. miles

As seen from the above, the training standard itself is not up to that existing before the war, and the operational errors are from three (3) to five (5) times as great as those obtained under target practice conditions. The various causes for these large errors are listed below, but no discussion is made because of the lack of sufficient data.

(a) Pre-war: 450 feet.

Unstabilized bomb sights (average errors from this source, 4 degrees:)

Vector type bomb sights requiring exact knowledge of wind direction and velocity for accuracy :

Incomplete curriculum:
Insufficient ground instructions:
Limited flying instruction.

(b) War, target practice: 900 feet.

All factors listed in (a) above:
Completion of less than prescribed curriculum.

(c) Bombing of Scharnhorst and Gneisenau: 3,600 feet.

Insufficient sustaining practice after completion of initial bombing training:

No previous night bombing experience;
No previous bombing at altitudes above 6,000 feet;
Limited length bombing approaches;
No previous practice in short approaches;
Inability to properly illuminate objective;
Searchlights;
Smoke and Haze;
Antiaircraft fire;
Camouflage.

(d) Objectives in Germany: 4,500 feet.

All reasons listed in (c) above;
Inability to pick out exact aiming point.

(2) Effect of present size errors. With the errors now being obtained, only two types of bombing attack are possible, the blitz (or area bombing) and minimum altitude bombing from 10 to 100 feet. It has been tentatively determined that for the blitz type attack to be decisive, approximately ten (10) tons of H. E. per square mile must be placed in the area in question. Consequently, tremendous efforts are required for success. Unfortunately, the R.A.F. does not as yet have sufficient crews or airplanes available to produce satisfactory results. Present bombing can be called harassing only. The minimum altitude type of attack has resulted in excessive losses due to the relatively slow speeds of the airplanes used. The fighter (Hurricane) has been recently converted to an attack bomber with success.

(3) The Sperry bomb sight.

(a) There has not been sufficient bombing with this bomb sight to warrant drawing any definite conclusions from its use to date. The small amount of operational bombing undertaken with the B-17's was with inexperienced personnel who were totally unqualified in making bombing approaches from high altitudes.

(b) Recently, a school was established for training on this bomb sight at Air Armament School No. 1. The chief instructor has a thorough knowledge of the problems involved, but because of other considerations, as for example only two (2) bomb sights and airplanes with which to give instruction, the three courses finished to date have been far too short.

Summarized:

Course No.	Length in Weeks	% Air Training Completed	No. releases per student	Error in feet adjusted to 10,000' altitude
1	4	40	19	282
2	6	55	32	213
3	6	60	54	164

In spite of the fact that the above scores are excellent, the capabilities of the above bombardiers cannot be very high as it has been the experience of our Air Forces that approximately 150 to 200 releases are required for minimum qualification with this type bomb sight.

THIS PAGE IS UNCALSSIFIED

(4) Bombing trends.

(a) Bombsights. The R.A.F. has developed the Mark XIV bomb sight in the hope of reducing their average bombing errors from 4,500 feet to 1,500 feet. Adaptability for night use, latitude for evasive action, and ease of operation are its main characteristics. In order to incorporate same, it was found necessary to sacrifice accuracy, the probable operating error of the sight under target practice conditions being between 30 and 40 mils. The relationship between combat and target practice conditions for this type bombsight remain to be proven. For the present it seems that the policy of the R.A.F. will be to replace all except the Sperry with this type. Regardless of the outcome of tests now contemplated, several well trained squadrons equipped with the Sperry bombsight will be held in readiness for precision bombing assignments.

(b) Bombs. It is quite evident, considering the trend in bomb sights and bombs, that the R.A.F. has given up hope of precision bombing for the present at least. The 4,000 lb. and larger bombs now being used are superior to the same weight in small bombs when it comes to knocking down large town areas by blitz bombing. Against military objectives where precision bombing is used, smaller bombs of the proper sizes are of course the better.

(5) Torpedoes. The successes of torpedo attacks on naval vessels are too well known to bear repetition here. At the present time, the use of this weapon is limited to the Coastal and Naval Commands whose regular objectives naturally include all types naval vessels. The adaptability of all bombardment type airplanes to carry either bombs or torpedoes is desirable.

5. Estimated capabilities of the U. S. Army Air Forces in the European Theatre.

It is a maxim of war that while the conditions under which wars are fought are ever changing the principles always remain the same. This is no place better illustrated than in the present conflict. The principles and teachings laid down in the A. C. Tactical School texts are still sound. However, two serious ommissions were made - the effects of tremendous concentrations of defensive aircraft and antiaircraft and the difficulties of operating under blackout conditions. Consequently, although our training is superior to that of the R.A.F. in many respects, it was not and still is not advanced sufficiently to insure satisfactory operations in this theatre.

6. Conclusions. It is concluded that:

a. Effectiveness of Air Power. With the efficient use of sufficient airplanes and properly trained combat crews based within the operating radius of Germany and Italy, the ability and will of Germany and Italy, to continue the war in the European Theatre can be destroyed.

b. Wastage. The commitment of personnel and equipment to operations in the European or other Theatre without the most thorough and complete training, will result in tremendous losses of personnel and equipment for the results obtained.

c. Personnel.

(1) The value of properly selected and trained bombardiers and navigators cannot be over emphasized.
(2) Bombardiers and navigators should be advanced in accordance with their qualifications and responsibilities.

d. Night Bombing.

(1) At the present time there are not sufficient trained crews or airplanes to exert effective air power by this method.
(2) Because of poor training methods, lack of navigational aids, and improper tactics, only a small percentage of aircraft dispatched by the R.A.F. actually reach their targets.
(3) The U. S. Army Air Forces require additional training if they are to accomplish successful night bombing missions in the European Theatre.
(4) Precision night bombing can be accomplished by:
(a) Thoroughly trained combat crews.
(b) Proper tactics.
(c) Careful planning, taking full advantage of the weather.
(d) Modification of existing standard bomb sights to incorporate adaptibility for night operations, evasive action, and short bombing approaches.

e. Day Bombing.

(1) With present equipment, day bombing is limited to:
(a) Bombing with pursuit escort,
(b) Using cloud cover,
(c) Shallow penetrations at Minimum altitudes,
(d) Shallow penetrations with fast single seaters.

THIS PAGE IS UNCALSSIFIED

(2) Day bombing in the European Theatre is possible with the proper combinations of the following:

(a) Defensive Machine guns and cannon in power turrets (an absolute necessity).
(b) High speed.
(c) High altitude operations with pressure cabins.
(d) Escort fighters.
(e) Proper tactics.
(f) Thoroughly trained and disciplined combat crews.

7. Recommendations. It is recommended that:

(a) For bombardment, QUALITY as gained by increased and sufficient training be emphasized, with desired numbers obtained from larger and/or more schools. It should be held in mind that ten (10) properly qualified combat crews can do the job of fifty (50) to one hundred (100) poorly trained crews.

(b) Bombardment Operational Training Units, separate and distinct from the bombardment units of the Army Air Forces, be established immediately.

(c) U. S. Bombardment Forces be not committed to the European Theatre until such time as each individual combat crew has demonstrated its fitness in the following:

(1) Navigate both day and night to within five (5) miles of the objective, under all conditions of weather and visibility, taking evasive action during the entire time of flight over assumed enemy territory.

(2) Locate and identify specific targets contained within the objective under simulated operational conditions.

(3) Bomb accurately a target illuminated by flares.

(4) Bomb accurately using bombing approaches of preferably twenty (20) but not in excess of thirty (30) seconds.

(5) Return to home or alternate bases under all conditions of simulated failure of radio and navigational aids.

(6) Unit tactical procedure.

(d) A career be provided qualified bombardiers and navigators.

(e) Personnel be most carefully selected for bombardier and navigation training.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

(f) The following equipment be developed and produced:

(1) A two seater reconnaissance bomber with maximum speed possible.
(2) An escort fighter with the same range as bombardment.
(3) Twin engine long range dive and torpedo bombers.
(4) Suitable bombing and navigation flares.
(5) Adequate navigation aids.

(g) Long range weather forecasting development continued to the utmost.

REFERENCE DATA ON HEAVY BOMBERS

I. Tabulated below are 17 reasons why big bombardment airplanes are better than little bombardment airplanes and 9 reasons (which General Marshall has read and noted, "I agree. GCM") why bombardment airplanes are better than flying boats.

II. Big bombers are better than little bombers:

1. Big bombers cost half as much in dollars per ton of bombs delivered.

2. Big bombers locate the target, having room for the necessary navigation and radio equipment.

3. The big bomber hits the target, carrying sufficient bombs to hit maneuvering targets by bombing in trail.

4. Big bombers destroy any target, carrying 4,000 pounds of bombs if necessary.

5. Big bombers resist hostile fire. Adequate armor plate forces a lesser proportionate reduction in bomb load and the structure is able to withstand more punishment than is the case with lighter airplanes.

6. The big bomber can defend itself, having room for a sufficient number of turrets and being able to carry more guns with a lesser proportionate reduction with the bomb load than is the case with lighter airplanes.

7. The big bomber is more efficiently leak-proofed. The leak-proofing forces a lesser proportionate reduction in bomb load than is the case with lighter bombers.

8. The big bomber can work alone and therefore has greater flexibility in its employ for the three reasons indicated immediately above.

#10

THIS PAGE IS UNCALSSIFIED

9. The big bomber requires one-third as many combat crews per ton of bombs delivered.

10. The big bomber requires one-half as many maintenance personnel per ton of bombs delivered.

11. The big bomber suffers no greater loss rate on the ground because fewer airplanes must be defended, concealed and camouflaged per ton of bombs delivered.

12. The big bomber suffers less losses in the air per ton of bombs delivered because of 5, 6, and 7 above.

13. The big bomber is easier to manufacture per ton of bombs delivered because:

a. Fewer accessories are required.
b. There is room for more workmen to work simultaneously on the large airplane's structure.
c. Less floor space is required.

14. The big bomber causes less congestion in the air per ton of bombs delivered.

15. The big bomber requires fewer airdromes to be built, defended and administered.

16. The big bomber, with fewer operating bases and lesser personnel per ton of bombs delivered, imposes a much simpler problem in logistics.

17. The big bomber permits more positive and easier command and control per ton of bombs delivered.

III. Bombers are better than boats because:

1. Flying boats are inherently more vulnerable than land planes because all-round machine gun fire cannot be achieved in a flying boat due to the shape of the hull.

2. Flying boats have lesser chances of accomplishing the mission because they have poorer performance and less effective machine gun defense.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

3. Flying boats cannot be designed for aerodynamic efficiency because of the requirements for hydrodynamic efficiency. Float sponsons and high wing design force the flying boat to slower, less maneuverable, lower ceiled, more slowly climbing and to have less load carrying capacity (of the order of 4%). Hydrodynamic requirements cannot be fully met since the flying boat is inherently top-heavy, difficult to manage on the water, relatively fragile and will never ride out storms.

4. Flying boats cannot gain the advantages of concealment and security afforded by high altitude performance due to the hydrodynamic consideration in their design.

5. Flying boats cannot be concealed, requiring known harbors and lakes of considerable dimensions.

6. Flying boats are more dependent upon base facilities than are land planes. Docks, ramps, cranes, hoists, lighters, tenders, tugs, lifts, etc. are required; all of which are bound to shore lines which have no depth and are therefore difficult to disperse and conceal.

7. Flying boats are more difficult to maintain. If a motor must be changed at a critical time and the weather is bad, the flying boat in the water remains "out".

8. Flying boats are more restricted by weather since ice, cold and snow handicap the flying boat to a greater extent than the land plane. When a coast line is "closed" by weather, the flying boat cannot take off blind and proceed inland to a clear airdrome.

9. Flying boats cannot readily reinforce units from one coast to another unless they are of an extremely long range type. Although boats can fly over land with the same facility that land planes can fly over water, flying boats, with their lack of altitude performance, may encounter catastrophic conditions when finding unforecast storms in mountainous regions. Under such circumstances land planes can find alternate airdromes if the whole performance does not permit them to fly over the storm.

23 February 1945

MEMORANDUM FOR GENERAL KUTER:

1. From Thursday, 1 March to 3 March, approximately thirty-five members of the Aviation Writers Association, a group of journalists and magazine writers who have specialized in aviation coverage for many years, are meeting in Washington. Although many of them write for so-called trade magazines, many of them also have connections with national media of greater proportions and many of them have a great following. Throughout the past three or four years they have been our good friends and have been most helpful in getting the story of the rise of American Air Forces to the American public. We have not, in many cases, given them the attention that this consistent, loyal and cooperative attitude has warranted them.

2. During their meetings here, they have set aside an hour, 1400 to 1500 on 2 March, at Statler Hotel, a conference room during which they may be indoctrinated on latest Air Forces policy matters.

3. It is strongly recommended that if your schedule permits that you meet with these writers for an off-the-record discussion of Air Force matters nearest our present aims and objectives. This meeting could be similar to the type held with the Association of Radio News Analysts in New York at which Mr. Lovett, General Arnold, General Grant, etc. have appeared. They have also asked that the Air Forces representative who meets with them on 2 March be their guest at the dinner at the Statler the evening of 1 March, if possible (no speech). Thanks but must regret. LSK

Unfortunately this is the regular meeting time for the CCS. Gen Hood should be scheduled. The CCS meeting may be cancelled, if so I'd be glad to join Hood.

LSK

Signed

WILLIAM WESTLAKE,
Colonel, G. S. C.,
Assistant to Director for Army Air Forces.

HEADQUARTERS, ARMY AIR FORCES
WASHINGTON

IN REPLY REFER TO:

SUBJECT: Unsatisfactory Rail Transportation.

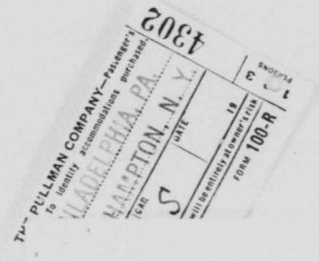
TO : Major General O. P. Echols
Assistant Chief of Air Staff, M&S
The Pentagon
Washington, D. C.

1. After many hours of time and effort an officer, acting as my Aide, purchased railroad tickets and pullman space for me and my wife for a short trip between December 22nd and December 27th, 1944. The railroad service resulting therefrom was most unpleasant and thoroughly unsatisfactory. If this situation prevails in the case of a Major General and his wife dealing through the highest offices in Washington the average enlisted member of the U.S. Army must have an extremely disagreeable impression of the military control of rail transportation. It is in the hope that some improvement in this situation might ensue that this letter is written.

2. The trip involved proceeding via the B&O leaving Washington December 22nd at 6:20 p.m. to Philadelphia and leaving Philadelphia via the Reading Railroad at about 11:45 that night to Binghampton, New York at about 7:30 a.m. December 23rd. The first distressing incident occurred in the Union Station in Washington where a stupid system was enforced requiring individuals to pass through a single gate, displaying their tickets enroute to the trains. The driver who took me to the station informed me that a riot ensued shortly after I forced my way through that single gate and police reserves and additional MP's were called to quell the throng when it became apparent that bottle-necking passengers through a single gate would cause hundreds of people to miss the trains for which they had purchased tickets.

3. In Philadelphia a change of stations was involved. The B&O Railroad provided taxi transfers. There were no taxis available.

ADDRESS REPLY TO: COMMANDING GENERAL, ARMY AIR FORCES, WASHINGTON 25, D. C.



13

THIS PAGE IS UNCALSSIFIED

Streetcar traffic was blocked by a traffic jam -- cause unknown. It was necessary to walk some thirteen long blocks late at night, carrying all baggage, in order to make connections. Military personnel could very easily have been provided transportation from station to station. Even a truck would have been welcome.

4. The unsatisfactory incident of greatest concern to the Washington transportation office occurred in leaving Binghampton on the return trip on the train scheduled to leave at about 11:30p.m. December 27th. Upon boarding this train when it arrived an hour later, and shortly after mid-night, I learned that Lower 8 for which I held proper tickets had been also sold at Syracuse and was occupied. A disagreeable porter stated that he could do nothing about it and an ineffective clerk in the station stated that the matter was not within his province and must be solved by the porter. When I became more disagreeable than either and insisted on getting the station master out of bed the porter remembered that he had a vacant upper berth which my wife and I accepted rather than forcing the movement of whomever may have been sleeping in my berth. Both the porter and the man at the ticket window at Binghampton, New York at the time told me that all reservations made in Washington were habitually improperly handled and caused confusion. They stated that the Washington offices failed to inform other interested parties and take the necessary action to avoid re-selling space purchased here. They further informed me that I had been over-charged for the Lower 8 which my ticket called for. The ticket stub in question is appended hereto.

5. On this short and never to be repeated trip of mine there were at least fifty and possibly one hundred civilians per each uniformed individual with pullman accommodations. Uniformed personnel were packed into coaches. Enroute from Philadelphia to Binghampton there was one Rear Admiral with pullman accommodations in addition to myself, and on the return there was one Lieutenant, U.S.N., on the train. This Lieutenant had completed his leave after a tour of combat duty and was reporting, under orders, for duty in Washington. He had been unable to obtain any pullman accommodations traveling under orders, having been told by station personnel at Syracuse that they had no authority to award him any priority whatsoever. He had met successive trains and finally found one on which he could get aboard.

THIS PAGE IS UNCALSSIFIED

6. The Naval Lieutenant joins me in my strong feeling that the extent to which we have failed to exercise reasonable control or priority supervision over the railroads is a disgrace to the services. If I can be of assistance to you in improving this situation I still have abundant steam to let off.

L. S. KUTER,
Major General, U.S.A.
Assistant Chief of Air Staff, Plans.

File - "Jap belief that American Will Not fight to the Finish"

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

Speech by Maj. Gen. Nakao YAHAGI: Given at a meeting of the Central Cooperative Council of the Imperial Rule Assistance Association on July 16, 1943.

"... As for American soldiers sent to the fronts, they came out fighting quite fiercely at the outset when they had not yet tasted the bitterness of fighting, obviously bolstered by their traditional love for adventure, curiosity, hero worship, and piratic spirit.

"But this is just what we want, for by inflicting gigantic losses of enemy personnel, thus debilitating their man-power strength, and by smashing their strategy based upon mechanical and material strength we are able to give them a full taste of Nippon's peerless spiritual strength and make them realize the foolhardiness of continuing a useless counteroffensive. That (U.S.) troops have chosen to approach our lines is just the chance we have been waiting for to smash American war strength spiritually and materially."

Speech by Premier Kuniaki Koiso at a mass rally at Osaka on October 30, 1944.

"The loyalty and spiritual power of our heroes who shared their fate with their ships, or who died by enemy bullets during battle of inferior strength against a powerful enemy force, or those who never did come back from their mission because of having crashed their bodies, together with their beloved planes, into the enemy warships by plunging through the middle of clouded gun-smoke and massed enemy planes, are the manifestation of the brilliant spirit which is a tradition of Imperial Japan.

"... As mentioned in the foregoing, the enemy puts material superiority before justice and consideration for men. However, as long as the Imperial Forces received the necessary amount of airplanes and ordinances, material power is helpless when confronted by our traditionally gallant fighting spirit, and it has been clearly proved by our recent victories."

Gen Kuter

My dear Mr. Secretary:

I am enclosing a copy of a letter dated November 22, 1944, addressed by the American Ambassador at Ottawa to an officer of the Department recommending that steps be taken to invite the Royal Canadian Air Force to operate with the United States forces in the Pacific area and to facilitate, to the extent necessary, the acquisition by the RCAF of American planes and equipment required therefor.

The Ambassador's recommendation has already been brought informally to the attention of officers of the War Department, including General Arnold, and it is understood that further consideration is to be given to it. This letter, therefore, is to assure you that from the standpoint of foreign policy, the State Department fully endorses this proposal as being in the interests of the United States and consistent with the objectives of the President in setting up, in conjunction with Prime Minister King, the Permanent Joint Board on Defense, United States and Canada.

In connection with the foregoing, I am now informed that Air Marshal R. Leckie, Chief of Staff, Royal Canadian Air Force, is to be in Washington this week. Accordingly, if the Ambassador's proposal is found desirable from the standpoint of military policy, a favorable opportunity for acting upon it is at hand. If this is done, may I suggest that, in connection with financing of American equipment for Canadian use, Canada does not accept Lend Lease assistance. The question of financing is therefore a separate question which could be worked out cooperatively if and when Canada accepts the proposal discussed herein.

I am sending a copy of this letter and its enclosures to the Secretary of the Navy.

Sincerely yours,

/s/ by Secretary of State

SECRET

My dear Mr. Secretary:

I am sending you herewith a copy of a letter which I am addressing today to the Secretary of War to bring formally to his attention a proposal made by the American Ambassador to Canada that the Royal Canadian Air Force be invited to participate with American forces in the Pacific area. A copy of the Ambassador's letter on this subject is also attached.

Sincerely yours,

Enclosures:

Copy of letter to the
Secretary of War.

Copy of letter from
American Ambassador
November 22, 1944.

The Honorable
Hames V. Forrestal,
Secretary of the Navy.

(Orig sent to Col Grant Mason for nec. act)

Telephone Conversation MAR 3 1944

Between

General Kuter and General Fairchild (Chicago)
with Comments by Col Mason.

K: Kuter speaking

F: Hello - Kuter.

K: Good morning, Sir.

F: Looks beautiful!

K: Things are going nicely, I see by the newspapers.

F: Yes, aren't they though?

F: Well, I just wanted to tell you that the result of the conference here. I am maintaining the position of an observer and consultant.

K: You are observer and consultant?

F: Yes. I am not participating in the work of the conference or of the committee.

K: And you want that clearly understood that you're not participating.

F: Yes. That's right.

K: I understand that.

F: I made that a point with Mr. Lovett, but I still keep bobbing up in the committee lists, etc., but so far have been able to maintain my position.

K: For your information, I'm recording the conversation and Grant Mason is listening to at least that part I repeat.

F: Right. I believe our position at the moment to be as satisfactory as it can be under the circumstances. I think all of the points have been made with due decision at this time. You have noted the positions taken by the other delegations - they've been published in the paper, I believe - have they not?

#6

THIS PAGE IS UNCALSSIFIED

K: Grant, have you read the positions of the other delegations as published in the newspaper?

M: Yes Sir, in last night's newspaper only the Canadian and British views were printed.

K: Did you hear that Santy?

F: No, I couldn't hear that?

K: Up to last night we've read nothing except the British and Canadian views in the newspapers.

F: The Australian, New Zealand views have also been put out in general and they'll no doubt be printed today.

K: Australian and New Zealand today. Good.

F: Also some other countries are France and Mexico, Poland, etc., but they are not so specific.

K: France, Mexico, Poland and others not specific.

F: Yes, that is correct.

F: As we knew beforehand, the Canadian and British views are divergent in some respects and now the work of the conference is picking up into 4 Committees to consider the 4 different aspects of the problem. Those Committees are organizing today.

K: The 4 Committees follow the 4 major headings in the proposed agenda?

F: That is correct.

K: The Committees are being formed today.

F: That is right.

F: No doubt within a short time the position will begin to clarify. I have no plans at the moment but I probably will come back sometime shortly, at least for a while, and will give you a fuller report then.

K: You can't estimate the probable date of your return.

F: Not very clearly as yet. Perhaps within a day or two - perhaps it will be a few more days.

K: I see, but within a few days?

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

F: I think so, unless things go differently than I imagine they will.

K: Good. We'll inform your family. The Moseley's are here - we'll let them know.

F: Okay. I thank you very much. I have very little information other than that to give you. Do you know of any instructions from the General for me, or otherwise?

K: Grant - do we have anything to pass on to Santy?

M: No Sir. There just two things. Is there anything he needs out there? We've gotten up some papers and sent them out to Col. Harris, and they should be available to him there. We were wondering if he would need a "chair-warmer" when he comes back or any other help in the way of assistance?

K: Did you hear that Santy?

F: No, I did not.

K: Two items: First - is there anything that we can provide you beyond the papers that have been forwarded to Col. Harris, and - Secondly - do you anticipate requiring a "chair-warmer" in your absence?

F: I think the answer to both questions is "No". I know of nothing in answer to the first question at this time. Something may develop later. In answer to the second - it seems still to be a very difficult problem just like it was before. I think that that would have to be done thru Mr. Lovett if it were done.

K: Right.

F: I think there's no other way of doing it and even that might be difficult.

K: No affirmative answer to either question.

K: Grant, has anything come from General Arnold since General Fairchild left, that you know of?

M: No Sir. Regret that Gen. Fairchild was unable to see Gen. Arnold before he left, and that we'll thru the Advisory Council, advise General Arnold of our talk with him. That's all.

K: Thank you. No comment from Gen. Arnold at all Santy. We'll inform him of this conversation thru the Advisory Council.

F: Good, thank you.

K: Thank you for calling and expect to hear from you again. Good luck to you.

F: Thank you. Goodbye.

MEMORANDUM FOR GENERAL McFARLAND -

At General Kuter's request I am sending you a draft of a Joint Chiefs of Staff paper which General Arnold asked to have prepared for his signature. This paper has not yet been submitted to General Arnold.

It is my understanding that you will review the matter and initiate whatever action appears desirable to you.

F. M. DEAN
Colonel, Air Corps

ENCLOSURE

PAPERS PRESENTED TO JOINT CHIEFS OF STAFF FOR ACTION

Memorandum by Commanding General, Army Air Forces

1. During the past year, there has been a marked increase in the volume of subjects presented to the Joint Chiefs of Staff for action. In my opinion this increase is due, at least in part, to presenting matters to the Joint Chiefs of Staff for decisions which could have been made without reference to them.

2. The successful functioning of the Joint Chiefs of Staff depends largely upon the personal attention and consideration given by the individual Chiefs to subjects presented for action. As the number of subjects increases it becomes more difficult to give each one thorough study and proper consideration.

3. Study of this problem might develop methods or new procedures which could be employed to bring about a substantial reduction in the number of papers requiring action by the Joint Chiefs of Staff. These might include certain types of screening, delegation to the Secretariat of authority to make disposition of certain matters or reference of papers to the Joint Deputy Chiefs of Staff.

4. It is therefore recommended that the Secretary be directed to study this matter and submit recommendations to the Joint Chiefs of Staff.

OFFICE OF THE SECRETARY
WASHINGTON, D. C.

12 October 1944.

MEMORANDUM FOR: General Kuter.

Attached for your information are copies of my letters of instruction to Mr. F. R. Collbohm, Mr. A. E. Raymond, and Mr. E. C. Wells.

Edward L. Bowles
Edward L. Bowles.

THIS PAGE IS UNCALSSIFIED

8 September 1944.

Dear Mr. Collbohm:

You have been called upon to assist the Army Air Forces in the planning and carrying out of a Special Bombardment Project against vital targets in Japan in accordance with principles set forth in my memorandum on this subject to General Arnold dated 28 August 1944.

In this undertaking you will work directly with the various staff divisions of Headquarters Army Air Forces and other agencies directly concerned with it. To assist you in doing so you have been appointed an Expert Consultant in the Office of the Secretary of War attached to my office.

Edward L. Bowles,
Expert Consultant to
the Secretary of War
and
Special Consultant to
the Commanding General,
Army Air Forces.

MEMORANDUM FOR COLONEL DEAN:

Herewith is a transcript of my quite unsatisfactory telephone conversation with General McFarland.

There is some virtue in our preparing a draft paper which he might submit "on his own initiative" concerning running the job of the Secretary, Joint Chiefs of Staff. Does this not give McRae - Newsome Inc. a choice opportunity?

Please give me a buzz when your reactions have jelled.

L. S. KUTER,
Major General, U.S.A.
Assistant Chief of Air Staff, Plans.

TRANSCRIPT OF TELEPHONE CONVERSATION

General McFarland - General Kuter

12 October 1944

M: McFarland

K: Larry Kuter, Mac.

M: Yes - How are you?

K: I tried to call you yesterday on the general subject of reduction in the trivial papers that come to the Chiefs. I believe that is the subject you have been worrying about.

M: Absolutely! I praise God that somebody else is interested in it too.

K: The subject apparently caused a major explosion over here on a paper entitled "Enlargement of Hatches of ZE7-2 type vessels". As a result of that explosion, draft paper has been prepared here which would wind up recommending that the Secretary be directed to study this matter and submit recommendations to the Joint Chiefs of Staff. My thought was that it would probably be much more comfortable all around if you, on your own initiative, would present recommendations to the Joint Chiefs of Staff on the subject. That was the reason I called you while this thing is still a draft here.

M: The difficulty is there, Larry. To screen those papers requires intelligent consideration. Now there are many papers that come up that are technical in their aspects and there is nobody in my groups here who is capable of saying positively and definitely they are not matters which should go to the Chiefs of Staff. Our recourse is to consult the committee -- you would be surprised at the amount of material that goes back to the Committees now which are found by my screeners here, and either eliminated or put in better form, or what-not. Now, you take this Hatch paper - on the face of it. That has to do with the delay in a program of importance with the Navy.

K: And to us, I believe.

M: Yes.

K: It has to do with ability of ships to load crated airplanes. My thought there was that it might be practicable to decentralize to you, and for you in turn to decentralize to the sub-committees, authority to act on these matters informing you briefly of their action, and after which you would decide whether or not those actions should be passed on for information of the Joint Chiefs.

#9

THIS PAGE IS UNCALSSIFIED

THIS PAGE IS UNCALSSIFIED

K: That is a pretty large job too, particularly in connection with technical matters. Now there are many things that come up here on which I want to take short-cuts and speed up the action, but my recourse is to the Committees who are informed, and I generally shoot them to the Committees for an informal opinion on the thing, and then I am guided in my action by what the Committee said. I do not always agree with the Committee, and sometimes when I feel the Committee is off-the-beam and I am sure of my own ground, I go ahead and do it on my own, because I have enough ground under my feet then to be willing to take the responsibility. In some cases I do not have enough knowledge on the thing to warrant me.....a little bit dubious about Committee's recommendation to deliberately flaunt it. So to screen all those things would be quite a responsibility, which at the present time I am not set up to do because I do not have the group of technical people who could tell me absolutely. Some cases I can, and other cases I cannot.

K: Would you prefer, Mac, to have the Chiefs instruct the Secretary to study the matter and submit recommendations?

M: No. I'll be glad to submit recommendations on it, to study it.

K: Well, my purpose of calling was to avoid any offensive or - principally, to avoid a written inferential criticism of the way the business is being run.

M: Well, it could be inferred of course from the action of the Chiefs in that case.

K: I feel that no matter how tactfully the paper is written, if a paper is written - it does infer criticism on your job, and that was the reason for...

M: Inescapable - well - I appreciate that. Let me suggest this. Have you got your ideas expressed in any written form over there on this particular paper?

K: Yes.

M: Would you send me that?

K: Will do.

M: If you will send that I will study the matter and submit some recommendations myself.

K: Splendid.

M: I appreciate your thoughtfulness, my dear boy.

K: Okay - we'll see you tomorrow.

THIS PAGE IS UNCALSSIFIED

SECRET

September 28, 1944

MEMORANDUM FOR MR. HOPKINS:

Subject: Policy for creation of balanced Air Forces in Central and South American Republics.

1. It is desirable to get an Administration decision on some policy such as that outlined below in order to facilitate the creation of balanced Air Forces in the other American Republics and to preclude any necessity or desire on the part of these Republics for European aircraft, and to further establish outlets for American Industries.

2. At this moment we have available in the United States abundant aircraft, aeronautical equipment and civilian school facilities to train pilots, mechanics, and airdrome operating personnel.

3. It would seem that the policy for the United States should take the above into consideration and might well be formed on the following lines:

a. Assist all those Central and South American Countries, in the order of priority approved by the State Department, in building up their Air Forces.

b. The U. S. Army Air Forces send a small mission to visit each Country in turn to work with the local authorities and determine the extent of the aid and assistance needed.

c. Make available to selected Countries, such as Brazil, Mexico, Guatemala, and Ecuador, schools for training mechanics, radio operators, weather men, airplane control tower operators, pilots, and other aviation specialists. Furnish these Countries the airplanes and equipment required for operating the schools and for continued training and maintenance. Costs should be nominal or equipment should be provided on a lend-lease basis.

d. Furnish other Countries in the approved order of priority such of the services and equipment outlined in paragraph c., as the size of the Air Force they have indicated to be necessary.

4. The advantages of a policy such as outlined above would be that:

a. It would take advantage of our surplus training facilities - airplanes, aviation equipment and personnel.

b. It would give these Countries a balanced Air Force, each in accordance with a justifiable strength.

c. It would eliminate any necessity on the part of these Countries to go to Europe to secure their equipment and it would bar foreign equipment from being used.

d. It would build up in these Countries the thought that the United States is trying to help them and also provide advantageous outlets to our Industries as equipment wears out.

Copy for Gen Kuter

SECRET

#10

e. It would provide a substantial measure of control by the United States Government over the size and composition of the Air Forces in all of the South and Central American Countries.

f. The cost to the Countries would be moderate and would be in accordance with their ability to pay.

Signed

H. H. ARNOLD
General, U. S. Army
Commanding General, Army Air Forces.

AUG 17 1944

MEMORANDUM FOR THE COMMANDING GENERAL, ARMY SERVICE FORCES:

Subject: Commendation.

1. Your Research and Development Branch, Office of the Quartermaster General, has delivered to me a wool field uniform, combat service boots and several miscellaneous items of new or experimental field equipment for officers.

2. Each of these items has impressed me with the thought and ingenuity that has gone into their design and development. The new duffle bag and liner, for example, convert an old sack to a fine piece of rough field luggage. The service boots and shoe packs appear to have the lightness, comfort and durability that were normally combined only in the finest sporting goods products of this type. In the field uniform you have a smart, serviceable, and comfortable garment made exceptionally desirable by the wind and waterproof jacket and trousers so well designed to wear over the field uniform.

3. I was particularly pleased and surprised by the excellent fit provided in these garments. After a brief discussion with your Colonel G. F. Doriot, Research and Development Branch, Office of the Quartermaster, and simple measurements by a civil assistant of his, the garments provided me fit better than many professional tailor's products have fit after several fittings. If you choose to make this expression of appreciation and particularly commendation for Colonel Doriot a matter of official record, I shall be pleased.

L. S. KUTER,
Major General, U.S.A.
Assistant Chief of Air Staff, Plans.
